INTRODUCTION

During 1985, a sample survey of the marine recreational catch and effort of charterboats in the southeastern United States was conducted by personnel of the National Marine Fisheries Service, Southeast Fisheries Center, Panama City Laboratory (NMFS-PC). The 1985 survey was an annual extension of techniques developed in 1982 (Brusher, Williams, Trent, and Palko. 1984. Mar. Fish. Rev. (46)3:8 p.). The purpose of this report is to make the detailed 1985 catch and effort records available. These data, like those recorded from 1982 through 1984, are available through NMFS-PC.

METHODS

As in 1984 (Williams, Brusher, Palko and Trent. 1985. NOAA Tech. Memo. NMFS-SEFC-157), the 1985 survey was conducted in three phases. The first phase covered from January 1, 1985 through March 31, 1985. The second phase extended from April 1, 1985 through November 30, 1985 (phase two included the bulk of the marine fishing season during 1985), while the third phase (actually the start of the 1986 winter season) only included December 1 through December 31, 1985. The geographical distribution of participating charterboat captains within each phase is shown in Table 1.

Contracted respondents from all phases were statistically chosen from a composite list of captains generated by NMFS-PC. This final address list reflected only those captains willing to enter into contracts, which required daily recording and weekly reporting of catch and effort. During each phase, the necessary number of contracted captains per area (see Table 1) were drawn from this respondent pool. Also in 1985, charterboat captains in some areas (Table 1) volunteered to keep logbooks on their vessels without contracts. During all phases, weekly response from each vessel was monitored. Contracted captains within an area who failed to fulfill reporting requirements were statistically replaced from the list of available area captains. Volunteer captains, however, were not replaced. Since volunteer data were gathered under different circumstances from contracted data, they are listed separately in appendix tables.

Logbooks containing weekly log forms (Figure 1) were provided to the captains, who completed the forms using the following definitions:

1. Fishing Method — "Troll" was defined as fishing activity undertaken with the boat moving under power. "Other" included all other types of fishing.

2. Fishing Zone(s) — Three distinct fishing zones were defined: estuarine or bay waters (zone 1), offshore waters less than ten fathoms deep (zone 2), and offshore waters over ten fathoms deep (zone 3). When more than one zone was fished, all

pertinent numbers were recorded.

3. Hours Actually Fished — Only actual fishing times, rounded to the nearest half-hour, were reported. Running times when hooks were not in the water were specifically excluded.

4. Species and Number Caught — The catches of species (Tables 2 and 3) were reported. Any species not included in the printed list of twenty-four (Fig. 1) were identified in the blank rows and the number of fish that were caught was noted in the appropriate column.

5. Target Group — Captains were requested to indicate what kinds of fish were sought for each fishing method per day. The groups were:

    1. inshore species -- barracuda, cobia, drums, jacks, mackerels, pompano, seatrouts, snook, tarpon, tripletails, and small tunas.

    2. offshore species — billfish, dolphin, large tunas, and wahoo.

    3. bottom species — groupers, grunts, porgies, snappers, and triggerfish.

6. For groups one to three, the appropriate box on the log form was marked. No box was marked if shark fishing. Since methods for obtaining target species information are still being evaluated, these reported data have not been included in appendix tables.

Each week, self-addressed, government-franked log forms were mailed to NMFS-PC, where data were transcribed into a computerized system that edited and archived the data and provided analyses.

RESULTS AND INTERPRETATION

Appendix Tables 1 through 31 list the data for the contractual respondents, and Appendix Tables 32 through 46 list the data for the volunteers. Each table reports catch and effort data chronologically for one area and fishing method. Tables for catches recorded in the "other" fishing method column are captioned "non-trolling." The elements within the Appendix Tables are defined as:

1. Date — the actual date fishing activity occurred.

2. Zone — (See no. 2 in methods for zones 1-3.) Fishing in multiple zones was reported as:

zone 4 -- Boat fished in zones 1 and 2.

zone 5 — Boat fished in zones 1 and 3.

zone 6 -- Boat fished in zones 2 and 3.

zone 7 — Boat fished in zones 1, 2, and 3.

3. Hours fished — the total number of hours fished by a single boat on all of its trips on one day using a particular method.

4. Catch per species — each catch is reported in a "species code:number caught" format; that is, of each pair of numbers, the species code is on the left and the number of fish that were caught is on the right following the colon. One or two spaces may be present between the colon and the number caught. For example, the first entry in Appendix Table 1 (33:__2) shows that 2 mako sharks were caught.

5. Continuation lines — when more than one line is required to display a day's catch data, the catches are continued on the next line but the date, zone, and hours-fished are not repeated (see Appendix Table 1, May 13). However, when a continuation must extend from the bottom of one column to the top of the next column or page, the trip information is repeated in the new column and a "+" is inserted after the hours-fished (see Appendix Table 3, August 28).

Table 1. Geographic distribution of contracted and volunteer respondents per survey phase during 1985 charterboat survey.
