Fig. 13: As in Fig. 9 except for the tornado on 22 May 2016. Left columns are from 2°, right columns from 18°. Heights near the center of the TVSs ranged from ~580-620 m (5 -5.5 km) ARL for the 2° (18°) scans. Gray pixels exceed the color bar. RaXPol is deployed to the upper right of the image, out of the range of the figure.
