SECTION I KEY-WORD INDEX	8
SECTION II AUTHOR INDEX	38
SECTION III GENERAL LISTING INDEX	87

#### ACKNOWLEDGMENTS

The authors wish to express their appreciation for the support provided by the Texas A&M University Sea Grant College Program through the National Oceanic and Atmospheric Administration.

Extended gratitude is offered to Mr. Sam Carpenter and Mr. Paul Versowsky who contributed significantly to this effort in its initial phase.

Special thanks is offered to Miss Lucinda Kerley for her help in key-punching the computer input for this bibliography.

### ABSTRACT

This bibliography is an up-to-date collection of available literature pertaining to offshore pipelines. Articles are listed as to subject matter in the key-word index and are listed under names of authors in the author-index. A general index is also included where article sources can be found.

#### INTRODUCTION

Technology of offshore pipelines is relatively new but growing fast because of the expanded use of submarine pipelines and the need to reduce costs and increase efficiency in construction. This bibliography is intended to provide a convenient source of references to those who are involved with design, analysis, research, construction, or other phases of this industry. Listed here is a collection of articles resulting from an extensive literary search. The key-word index system used provides the reader a tool to investigate the general state-of-the-art of offshore pipelines by listing the articles under headings pertaining to the content of the articles.

The bibliography is divided into three sections. Section I is the keyword index which lists articles under four major headings, grouping together all papers dealing with like subject matter. The four major headings were selected as divisions into which all subject material would fall. These are:

- 1) Predesign
- 2) Analysis
- 3) Design
- 4) Construction

After assigning articles to one of these, then a further breakdown as to subject matter follows. Section II is the author index which lists the authors alphabetically along with the titles of their articles. Section III is the general listing by bibliography number of each article. The author and source are also included.

The sorting and listing of articles in the bibliography was done by use of an IBM computer program entitled Key Word In Context (KWIC). Authors, titles, and sources for the articles are entered as data on computer cards. This data is then transformed into bibliographic output by the computer.

Any additional information or corrections that the users of this bibliography might care to make will be gratefully appreciated.

#### USER'S GUIDE

To locate articles of an area of interest, the following procedure may be helpful.

### Section I. - Key-word Index

First find the subject of interest in the flow-chart. The articles dealing with this subject will be listed under a key-word which is composed of the main heading and the subheadings found in the flow-chart, for example,

### Main heading, Subheading, Subheading

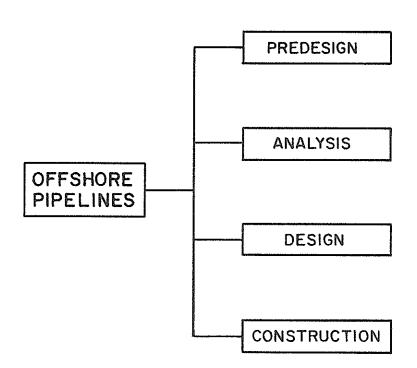

The hyphenated key-word can then be found in the alphabetized listings in Section I. Article titles and bibliography numbers are listed under each key-word. Authors and sources can be obtained in Section III under the appropriate bibliography number.

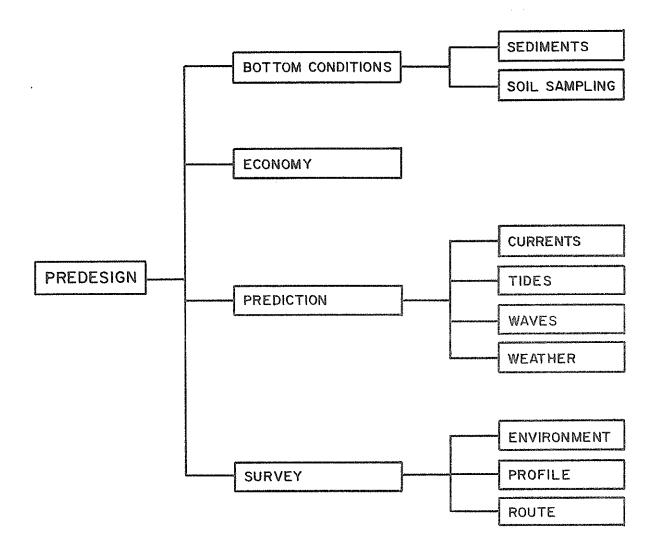

#### Section II. - Author Index

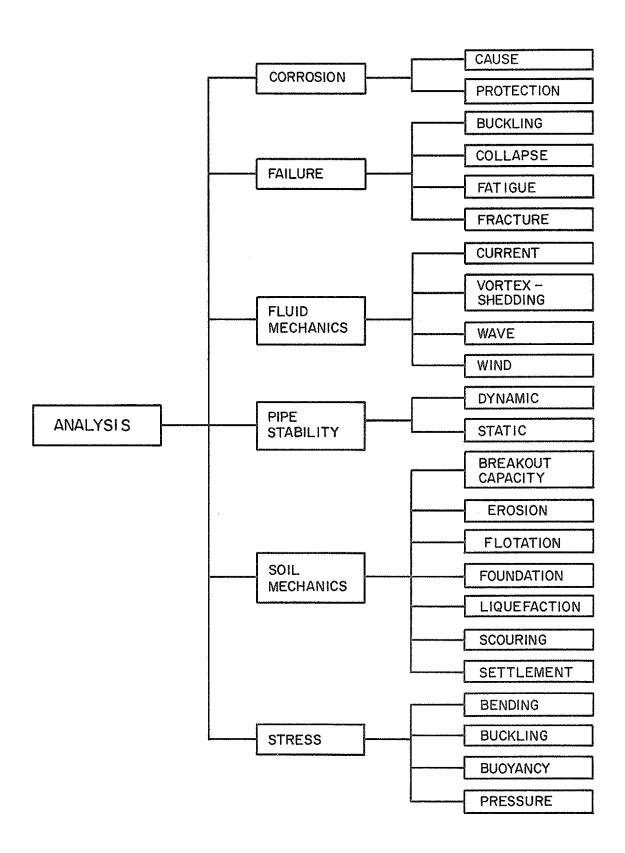

Authors are found in the alphabetical listings. Under each author's name, the articles by that author are listed along with the bibliography numbers corresponding to Section III, where sources for the articles are given.

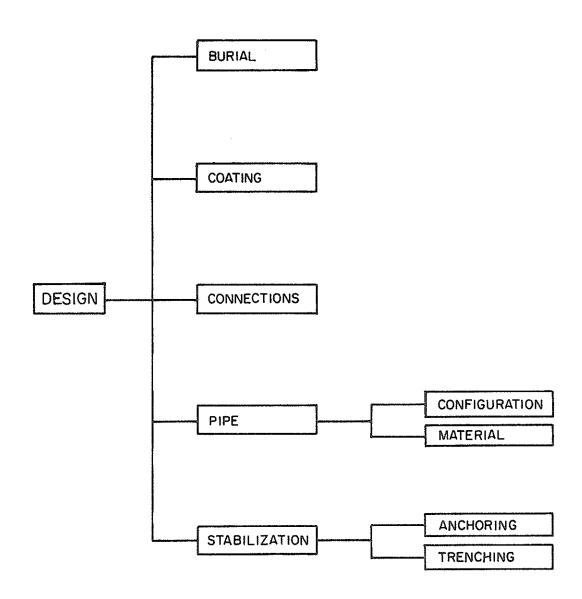

#### Section III. - General Listing Index

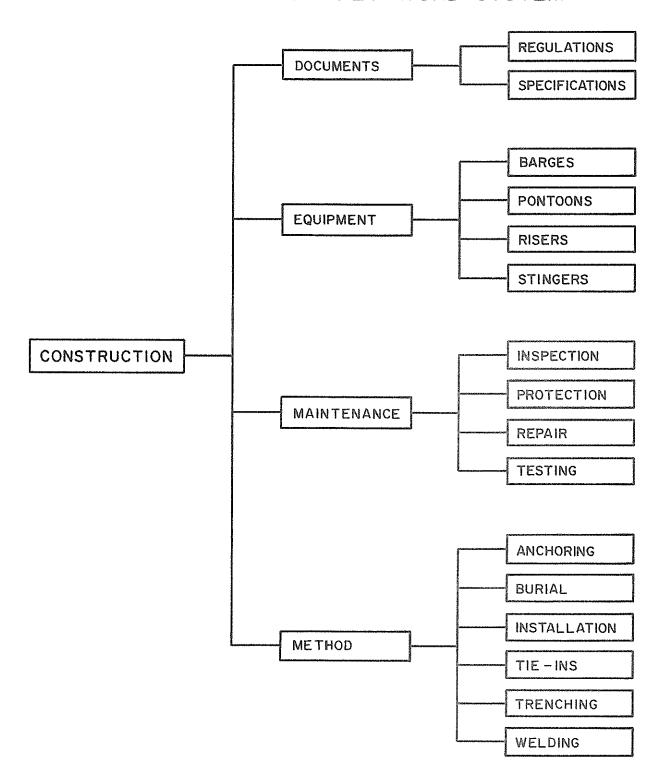

Bibliography numbers are listed in numerical order. Under each number is listed the title of the article, the author and the source.
