# About the Marine Sanctuaries Conservation Series 

The Office of National Marine Sanctuaries, part of the National Oceanic and Atmospheric Administration, serves as the trustee for a system of underwater parks encompassing more than 600,000 square miles of ocean and Great Lakes waters. The 13 national marine sanctuaries and two marine national monuments within the National Marine Sanctuary System represent areas of America’s ocean and Great Lakes environment that are of special national significance. Within their waters, giant humpback whales breed and calve their young, coral colonies flourish, and shipwrecks tell stories of our maritime history. Habitats include beautiful coral reefs, lush kelp forests, whale migration corridors, spectacular deepsea canyons, and underwater archaeological sites. These special places also provide homes to thousands of unique or endangered species and are important to America’s cultural heritage. Sites range in size from one square mile to almost 583,000 square miles and serve as natural classrooms, cherished recreational spots, and are home to valuable commercial industries.

Because of considerable differences in settings, resources, and threats, each marine sanctuary has a tailored management plan. Conservation, education, research, monitoring and enforcement programs vary accordingly. The integration of these programs is fundamental to marine protected area management. The Marine Sanctuaries Conservation Series reflects and supports this integration by providing a forum for publication and discussion of the complex issues currently facing the sanctuary system. Topics of published reports vary substantially and may include descriptions of educational programs, discussions on resource management issues, and results of scientific research and monitoring projects. The series facilitates integration of natural sciences, socioeconomic and cultural sciences, education, and policy development to accomplish the diverse needs of NOAA's resource protection mandate. All publications are available on the Office of National Marine Sanctuaries website (http://www.sanctuaries.noaa.gov).

## Abstract

This report is a companion report to the Socioeconomic Impact Analysis of Boundary Expansion in the Flower Garden Banks National Marine Sanctuary (Leeworthy et. al, 2016) and completes the description of the affected socioeconomic environment for the Draft Environmental Impact Statement (DEIS), the Final EIS, analysis of regulations under Regulatory Impact Review (RIR), and Initial and Final Regulatory Flexibility Analyses (impacts on small entities, primarily small businesses).

Study Area profiles provide the basis for further analyses to determine the dependencies of local communities and economies on the use of sanctuary resources. This helps assess the ability of residents of the Study Area to adapt to new policies or management strategies regarding the sanctuary, and how these would affect the residents' level of use of the sanctuary resources. The geographic bounds of the Study Area are adjustable. The Study Area profile includes the county or counties where the majority of the socioeconomic impacts that occur are related to the use of sanctuary resources. For the Flower Garden Banks National Marine Sanctuary and Boundary Expansion Area, there are eight counties that define the Study Area. This report provides information on the population, population density, and population growth of the study area as well as information on the demographics (gender, race/ethnicity, and age distributions) of the study area. Various economic factors, including per capita income, unemployment rates, poverty rates, income by place of work/residence, income by industry and employment by industry are also analyzed. All of this information is available on reliable existing sources and can be easily updated at any time.

## Introduction

This report is a companion report to the Socioeconomic Impact Analysis of Boundary Expansion in the Flower Garden Banks National Marine Sanctuary (Leeworthy et. al, 2016) and completes the description of the affected socioeconomic environment for the Draft Environmental Impact Statement (DEIS), the Final EIS, analysis of regulations under Regulatory Impact Review (RIR), and Initial and Final Regulatory Flexibility Analyses (impacts on small entities, primarily small businesses).

Study Area profiles provide the basis for further analyses to determine the dependencies of local communities and economies on the use of sanctuary resources. This helps assess the ability of residents of the Study Area to adapt to new policies or management strategies regarding the sanctuary, and how these would affect the residents' level of use of the sanctuary resources. The geographic bounds of the Study Area are adjustable. The Study Area profile includes the county or counties where the majority of the socioeconomic impacts that occur are related to the use of sanctuary resources. This report provides information on the population, population density, and population growth of the study area as well as information on the demographics (gender, race/ethnicity, and age distributions) of the study area. Various economic factors, including per capita income, unemployment rates, poverty rates, income by place of work/residence, income by industry and employment by industry are also analyzed. All of this information is available on reliable existing sources and can be easily updated at any time.

## Study Area Definition

Primary Counties are counties along the shoreline where the primary social and economic (socioeconomic) impacts take place from use of cultural and natural resources. Secondary counties are counties where a significant portion of economic impact takes place via the multiplier impacts of spending in the primary counties. These counties are determined by reviewing the Census of Inter-County Commuters at the U.S. Census Bureau. This file shows for each county where people work and the county (ies) where they live. The objective is to account as fully as practical the amount of "local" economic activity that is associated with spending related to the use of the cultural and natural resources. We use a threshold of 4,000 to 5,000 workers to reach a significant level to include a county as a secondary county. Figure 1 shows a map with primary counties highlighted in light blue and the secondary counties highlighted in pink that currently define the "Study Area" for the Flower Garden Banks and Boundary Expansion.

## Primary Counties (4)

Brazoria
Chambers
Galveston
Jefferson

## Secondary Counties (4)

Fort Bend
Harris
Hardin
Orange

## 1. Population and Key Measurements on the Economic Status of the Study Area

Population statistics are a key factor in determining the pressures placed on sanctuary resources by an area, but they also help show who may benefit from the ecosystem services provided by the sanctuary. Below, information is presented on total population by county, population density by county, population growth for the Study Area, and projected population growth for the Study Area. To assess the economic status of the Study Area, information on per capita income, poverty rates, and unemployment rates are also provided. The data for the Study Area is compared to that of Texas (TX) and the United States (U.S.) in order to determine relative health of the Study Area for selected measures.

## Population

The "Study Area" consists of eight TX counties with a combined population of almost 6 million in 2014, which is approximately $22.8 \%$ of the state's total population. The most populated county is Harris County, with just over 4.2 million people, and the least populated county was Chambers County, with a population just under 37,000 (Table 1.1).

## Population Growth

From 2000 to 2010 the Study Area’s population grew 22.5\% which is a higher percent than the growth of the U.S. or TX populations, which increased by $9.7 \%$ and $20.6 \%$ respectively. For the period of 2010 to 2014 the Study Area population was still growing faster than that of the U.S. and TX. It grew 4.4\% during this period (Table 1.2).

## Projected Population Growth

From 2000 to 2010 the Study Area’s population grew faster than those of TX and the U.S., but from 2010 to 2014 it grew slower than that of TX and faster than that of the U.S. Population projections estimate that the Study Area's population will grow faster than those of both TX and the U.S. from 2014 onward.

## Population Density

In 20104, population density for the Study Area as a whole was much higher than that of the U.S. and TX. The population density for the study area is 787 people per square mile, whereas the population density for the U.S. is 89 people per square mile and in TX it is 100 people per square mile. The population density also varied greatly among the individual counties in the study area. Harris County has the highest population density, with 2,506 people per square mile, and Chambers County has the lowest population density, with 61 people per square mile (Table 1.1).

Table 1.1 Selected Socioeconomic Measures for Description of the Study Area

## Per Capita Income

Per capita income is the average income earned per person in a given area and it indicates the health and economic status of a community. In 2014 the per capita income for the Study Area was $\$ 54,255$ and ranged from a high of $\$ 56,896$ in Harris County to \$39,532 in Jefferson County. In 2014, per capita income for the Study Area was greater than that of TX and the U.S. From 2000 to 2010, real per capita income (adjusted for inflation) for the Study Area grew faster than that of the U.S. but slower than that of TX, while from

2010 to 2014, real per capita income for the Study Area grew faster than that of TX and the U.S. (Table 1.3 and Figure 1.1).

Table 1.3 Unemployment Rates and Per Capita Income for the U.S., TX, and the Study Area, 2000, 2010, and 2014

| Measurement/Year | U.S. | Texas | Study Area |
| :---: | :---: | :---: | :---: |
| Unemployment Rate (\%) |  |  |  |
| 2000 | 4.1 | 4.3 | 4.4 |
| 2010 | 9.7 | 8.1 | 8.5 |
| 2014 | 6.2 | 5.1 | 5.1 |
| Per Capita Income |  |  |  |
| 2000 | 30,602 | 28,365 | 33,144 |
| 2010 | 40,277 | 38,282 | 44,487 |
| 2014 | 46,049 | 45,669 | 54,255 |
| Real Per Capita Income(2016\$) |  |  |  |
| 2000 | 42,693 | 39,572 | 46,239 |
| 2010 | 44,374 | 42,176 | 49,012 |
| 2014 | 46,730 | 46,344 | 55,057 |
| Real Per Capita Income Growth Rates (\%) |  |  |  |
| 2000-2010 | 3.9 | 6.6 | 6.0 |
| 2010-2014 | 5.3 | 9.9 | 12.3 |

Sources: U.S. Department of Commerce, Bureau of Economic Analysis, Regional Economic Information System and the U.S. Department of Labor, Bureau of Labor Statistics, Consumer Price Index.

For 2000-2010, real per capita income increased faster than the U.S. but slower than TX, while for 2010-2014 the study area it grew faster than the U.S. and TX.

Figure 1.1 Changes in Real Per Capita Income in the Study Area versus the US and TX

## Unemployment Rates

The unemployment rate is another indicator of the economic health of the study area. In 2014 the unemployment rate in the study area was $5.1 \%$, with the lowest rate being $4.5 \%$ in Fort Bend County and the highest rate being 8.3\% in Jefferson County. In 2014 the unemployment rate in the study area was equal to that of TX and lower than the unemployment rate in the U.S. Historically, the unemployment rate of the study area tends to fluctuate from being higher than that of TX and the U.S. to lower than that of TX and the U.S. (Figure 1.2)

The unemployment rate of the study area tends to fluctuate from being higher than that of TX and the U.S. to lower than that of TX and the U.S.

Figure 1.2 Unemployment Rates in the Study Area versus the U.S. and TX, 2000 to 2014

## 2. Demographic Profiles

For demographic profiles, gender, race/ethnicity, and age were selected as the most important population characteristics. Race and Ethnicity are treated separately in the United States Census. Racial Categories include "White", "Black or African American", "Alaskan Native or Native American", "Asian", "Native Hawaiian or Other Pacific Islander", "More Than One Race", and "Some Other Race". In this report "Native Hawaiian or Other Pacific Islander", "More Than One Race", and "Some Other Race" are all included in the "Other" category. Hispanic represents ethnicity and is recorded separately from race in the Census, with any race being able to identify as Hispanic. In the Census Hispanic represents those of Hispanic, Latino, or Spanish Origin. Race and Ethnicity are shown together in figures 2.2 and 2.3. For all figures in this section percentages may not total $100 \%$ since any race can also be Hispanic, Latino or Spanish Origin.

## Gender

In 2000, 2010, and 2014 the proportion of males in the study area was less than that of females. In all of these years the proportion of males in the study area was higher than that of TX and the U.S. and the proportion of females in the study area was lower than that of TX and the U.S. (Figure 2.1). For greater detail see Appendix Table A.1.

In 2000, 2010, and 2014 the proportion of males in the study area was less than that of females. In all of these years the proportion of males in the study area was higher than that of TX and the U.S.

Figure 2.1 Gender Distribution in the Study Area versus the U.S. and TX, 2000, 2010, and 2014

## Race/Ethnicity

In 2014 the portion of the study area population that identified as "White" and "Native American" was lower than that of TX and the U.S. The portion of the study area population that identified as "Black," "Asian" or "Other" was higher than that of TX and the U.S. The percentage of people in the study area who identified as "Hispanic" was lower than that of TX but higher than that of the U.S. Historically, the "White" population in the study area decreased from 2000 to 2010 and then increased from 2010 to 2014. Neither the "Black" population nor the "Native American" population in the study area changed drastically over the time period. The percentage of people in the study area who identified as "Asian" increased. The percentage of the study area population who identified as "Other" increased from 2000 to 2010, but decreased from 2010 to 2014. The "Hispanic" population in the study area increased. For greater detail see Appendix Table A.1.

In 2014 the portion of the study area population that identified as "White" and "Native American" was lower than that of TX and the U.S., while the portion of the study area population that identified as "Black," "Asian" or "Other" was higher than that of TX and the U.S. The percentage of people in the study area who identified as "Hispanic" was lower than that of TX but higher than that of the U.S.

Figure 2.2 Race and Ethnicity in the Study Area versus the U.S. and TX, 2014

The "White" population in the study area decreased from 2000 to 2010 and then increased from 2010 to 2014. The percentage of people in the study area who identified as "Asian" increased. The percentage of the study area population who identified as "Other" increased from 2000 to 2010, but decreased from 2010 to 2014. The "Hispanic" population in the study area increased.

Figure 2.3 Race and Ethnicity in the Study Area, 2000, 2010, and 2014

## Age

In 2014 the age distribution of the study area was similar to that of the U.S. and TX. All three distributions are skewed to the left, meaning a higher percent of the population is under the age of 35 and a lower percent of the population is age 55 and older (Figure 2.4). In past years the age distribution in the study area has followed the same trend, and in 2000 and 2010 it was left skewed. However, over time the proportion of the population age $0-44$ has decreased slightly while the proportion of the population age 55 and older has increased slightly. The proportion of the population age 45-54 has fluctuated during these years (Figure 2.5). For greater detail see Appendix Table A.1.

In 2014 the age distribution of the study area was similar to that of the U.S. and TX. All three distributions are skewed to the left, meaning a higher percent of the population is under the age of 35 and a lower percent of the population is age 55 and older.

Figure 2.4 Age Distributions in the Study Area versus the U.S. and TX, 2014

In past years the age distribution in the study area has followed the same trend, and in 2000 and 2010 it was more heavily concentrated in ages 5 to 34 . However, over time the proportion of the population age $0-44$ has decreased slightly while the proportion of the population age 55 and older has increased slightly. The proportion of the population age 45-54 has fluctuated during these years.

Figure 2.5 Age Distributions in the Study Area, 2000, 2010, and 2014

## 3. Economic Profile

In a previous section, several key indicators of economic health (per capita income, poverty rates, and unemployment rates) were addressed. In this section other indicators are analyzed, including labor force, employment, proprietors' income and employment, personal income, and personal income and employment by industry.

## Labor Force

Labor force and labor force growth are good indicators of a healthy or stagnant economy. When determining whether or not people can adapt to changes in the regulations and policies concerning the sanctuaries it is important to look at the labor force and labor force growth rates.

In 2014 the study area labor force was almost 3.1 million people, which is $23.7 \%$ of the entire TX labor force. From 2000 to 2010 and 2010 to 2014 the study area labor force grew more rapidly than that of TX or the U.S. (Table 3.1 and Figure 3.1).

Table 3.1 Labor Force and Labor Force Growth

| Year | U.S. | Texas | Study Area |
| :---: | :---: | :---: | :---: |
| 2000 | $143,893,664$ | $10,374,095$ | $2,349,627$ |
| 2010 | $155,539,424$ | $12,241,994$ | $2,858,865$ |
| 2014 | $157,401,053$ | $13,022,869$ | $3,092,412$ |
| Labor Force Growth <br> (\%) |  |  |  |
| 2000 to 2010 | 8.1 | 18.0 | 21.7 |
| 2010 to 2014 | 1.2 | 6.4 | 8.2 |

[^0]From 2000 to 2010 and 2010 to 2014 the study area labor force grew more rapidly than that of TX or the U.S.

Figure 3.1 Labor Force Growth 2000 to 2010 and 2010 to 2014 in the Study Area versus the U.S. and TX

## Employment

Total employment and its growth rate are also other indicators of the health of an economy and should be analyzed when assessing whether or not a community can adapt to changing regulations and policies regarding the sanctuary.

In 2014 almost 3.9 million people were employed in the study area, which is approximately $24.1 \%$ of all employment in TX. From 2000 to 2010 Orange County experienced a decrease in total employment. However, from 2010 to 2014 all counties experienced an increase in total employment, but 2014 levels of employment for Orange County were still lower than 2000 levels (Table 3.2). Total employment growth in the study area increased more than that of TX or the U.S. from 2000 to 2010 and from 2010 to 2014 (Figure 3.2).

Table 3.2 Total Employment: 2000, 2010, and 2014

| County | 2000 | 2010 | 2014 |
| :--- | ---: | ---: | ---: |
| Brazoria | 104,446 | 131,085 | 149,091 |
| Chambers | 9,727 | 12,601 | 15,429 |
| Galveston | 117,388 | 137,374 | 150,845 |
| Jefferson | 146,751 | 152,235 | 157,851 |
| Fort Bend | 143,284 | 247,203 | 302,657 |

> Total employment growth in the study area increased more than that of TX or the U.S. from 2000 to 2010 and from 2010 to 2014 .

Figure 3.2 Growth in Employment in the Study Area versus the U.S. and TX, 2000 to 2010 and 2010 to 2014

## Proprietors' Income and Employment

Proprietors' (business owners) income and employment, as well as the proportion of the Study Area's income and employment accounted for by the proprietors are also analyzed. These are usually an indicator of small businesses in the area, which are often connected to resource use in the sanctuary such as commercial fishing operations and recreation/tourist related businesses. Typically, the greater proprietors' income and employment, the more small businesses there are in the area and the larger the proportion of the Study Area's income and employment accounted for by proprietors the more dependent the economy is on small businesses.

In 2014 there were 882,644 proprietors in the study area, making up $22.9 \%$ of total employment in the study area. The study area had a lower percent of its employment from proprietors than TX in 2000, 2010 and 2014 (Figure 3.3). The percent of employment from proprietors increased in both the study area and TX from 2000 to 2010, and stayed relatively the same from 2010 to 2014. The proprietors earned a little over $\$ 64$ million in 2014, which was $22.1 \%$ of income earned by place of work in the study area (Table 3.3). For 2000, 2010, and 2014, Proprietor's income as a percent of income earned by place of work was higher in the study area that in TX (Figure 3.4).

The study area had a lower percent of its employment from proprietors than TX in 2000, 2010 and 2014.

Figure 3.3 Proprietors' Employment as a percent of Total Employment in the Study Area versus TX, 2000, 2010, and 2014

For 2000, 2010, and 2014, Proprietor's income as a percent of income earned by place of work was higher in the study area that in TX.

Figure 3.4 Proprietors’ Income as a percent of Total Income in the Study Area versus TX, 2000, 2010, and 2014

## Personal Income

Personal income can be divided into "Income by place of work", which is income generated within the Study Area, and "Income by place of residence", which is income received by residents of the Study Area. The U.S. Department of Commerce, Bureau of Economic Analysis maintains the national income accounts for both these measures. Often people commute to a different county to work (inter-county commuters), meaning they receive income not derived by work in the area where they live. People also receive interest, dividends, and capital gains from investments. Retirees receive pensions and social security and the unemployed receive unemployment benefits. Income by place of work as a percent of income by place of residence is a good indicator of whether an area has a large retirement community or serves as a bedroom community for an adjacent county. Sources of income that are not connected to the status of work in the local economy can make the economy more resilient and better able to handle changes in local employment opportunities.

Income by place of work as a percent of income by place of residence for the Study Area was $86.4 \%$ in 2014. This means that the majority of the income of the Study Area comes from within the Study Area, and less than 14\% of the income was from outside the Study Area. Across the different counties, income by place of work as a percent of income by place of residence varied greatly in 2014, with the highest being 99.0\% in Harris County and the lowest being $37.0 \%$ in Fort Bend County (Table 3.4). From the 2000 to 2014, income by place of work as a percent of income by place of residence for the Study Area was higher than that of TX (Table 3.5 and Figure 3.5).

## Personal Income and Employment by Industry Sector

The U.S. Department of Commerce, Bureau of Economic Analysis (BEA), in its Regional Economic Information System reports income and employment for different
geographic areas by industry or economic sector using North American Industry Classification System (NAICS) industry classification codes. The NAICS codes identify different sectors of the economy using up to four digits. The higher the number within a sector, the more specific the industry. For example, "retail trade" is the 700 series. So at the 700 level, all retail trade is included. Code 701 is "Motor Vehicle and parts dealers" and 702 is "Furniture and home furnishing stores". For the counties in our study area, we only report at the highest level i.e. for each series only the " 00 " level of detail. Even here, for some counties within the study area, the information is classified as "D" or "ND" for non-disclosure meaning the numbers cannot be reported because there are less than 10 firms in that industry or economic sector, it is possible to request a special run by BEA for the study area totals when there is more than one county with non-disclosure for a particular sector. We have not done that here.

## Personal Income by Industry

In 2014, the Study Area had a higher proportion of personal income generated in the "Mining, quarrying, and oil and gas extraction", "Construction", "Manufacturing", "Transportation and warehousing", and "Professional, scientific and technical services" sectors than TX, and a lower proportion in the "Retail trade", "Finance and insurance", and "Government and Government enterprises" sectors than TX. The proportions were similar for "Real estate and rental and leasing" and "Other services, except public administration" (Figure 3.6). For greater detail see Appendix Tables A. 2 and A.3.

In 2014, the Study Area had a higher proportion of personal income generated in the "Mining, quarrying, and oil and gas extraction", "Construction", "Manufacturing", "Transportation and warehousing", and "Professional, scientific and technical services" sectors than TX, and a lower proportion in the "Retail trade", "Finance and insurance", and "Government and Government enterprises" sectors than TX.

Figure 3.6 Percent of Personal Income by Industry for the Study Area versus TX, 2014

## Employment by Industry

In 2014, the Study Area had a higher proportion of employment generated in the "Construction", "Manufacturing", "Transportation and Warehousing", and "Professional, scientific, and technical" sectors than TX and a lower proportion of employment in the "Farm Earnings", "Retail Trade", "Finance and Insurance", and "Government and Government enterprises" (Figure 3.7). For greater detail see Appendix Tables A. 4 and A.5.

In 2014, the Study Area had a higher proportion of employment generated in the
"Construction", "Manufacturing", "Transportation and Warehousing", and "Professional, scientific, and technical" sectors than TX and a lower proportion of employment in the "Farm Earnings", "Retail Trade", "Finance and Insurance", and "Government and Government enterprises"

Figure 3.7 Percent of Employment by Industry for the Study Area versus Texas, 2014

## 4. Future Updates

Most of the data in this report can be updated by accessing the information on federal agency on-line data sets. For projections of population by county, Woods and Poole (2016) is available from the ONMS Conservation Science Division (CSD) upon request.

Usually, the information by county available from the Bureau of the Census or the Bureau of Economic Analysis is 18 to 24 months behind the current date. For example, 2011 data was available for most counties in June 2013.

ONMS/CSD Socioeconomic staff will also provide each site or sanctuary office all the final tables and figures in Excel files so updated tables and figures are more easily produced.

As mentioned in the introduction to this report, the definition of the Study Area for any sanctuary can change based on further learning, refinement of available data or study questions. The current Study Area is based on the recent study assessing the socioeconomic impacts of expanding the boundaries of the Flower Garden Banks (Leeworthy et al. 2016). Future changes in the boundaries of the sanctuary or expanded activities conducted in the sanctuary from bases outside the current study area could change.
