

PIFSC Report on the American Samoa Troll Fishery During Calendar Year 2016¹

Fisheries Research and Monitoring Division, National Marine Fisheries Service, Pacific Islands Fisheries Science Center, NOAA Inouye Regional Center, 1845 Wasp Boulevard, Building 176, Honolulu, HI 96818

The following figures and tables represent estimated effort, retained (kept) catch and discards from American Samoa troll data collected via a creel survey. The summary was created with a data version obtained from the Department of Marine & Wildlife Resources (DMWR), American Samoa Government, in February 2017. These estimates are developed using a data expansion algorithm (Bak Hospital, 2014, PIFSC Admin. Rep. H-15-06C), based on surveying a sample of fishing effort and enumerating catch on a subsample of fishing trips annually. Expanded estimates may be biased when catch comes from a small number of surveyed trips and catch data from a few trips is unusual, as was the case for wahoo in 2016.

Note: the following estimates represent a revision from preliminary estimates provided to the WPRFMC Science and Statistical Committee (8 March 2017).
