TEMPERATURE EXTREMES IN THE UNITED STATES

Temperatures in this summary are given in degrees Fahrenheit (°F). Most countries in the world report temperatures in degrees Celsius (°C), also called Centigrade. Temperature conversion aids are given on page 6.

TEMPERATURE EXTREMES, HIGHEST

Recorded temperature extremes depend upon a number of factors. Some important factors are: elevation, latitude, condition of the earth's surface, local effects of terrain, the density of the observational network, and the length of the observational record.

Greenland Ranch, California, with 134° on July 10, 1913 holds the record for the highest temperature ever officially observed in the United States. This station was located in barren Death Valley, 178 feet below sea level. Death Valley is about 140 miles long, 4 to 16 miles wide, and oriented north to south in southwestern Much of the Valley is below sea level and is flanked by towering mountain ranges with Mt. Whitney, the highest landmark in the 48 conterminous States, rising to 14,495 feet above sea level, less than 100 miles to the west. Death Valley has the hottest summers in the Western Hemisphere, and is the only known place in the United States where nighttime temperatures sometimes remain above 100°.

The highest annual normal (1941-70 mean) temperature in the United States, 78.2°, and the highest summer (June-August) normal temperature, 98.2°, are for Death The highest winter (December-February) normal temperature is Valley, California. 72.8° for Honolulu, Hawaii.

Amazing temperature rises of 40° to 50° in a few minutes occasionally may be brought about by chinook winds. Some outstanding temperature rises are:

83°, Granville, North Dakota, Feb. 21, 1918, from -33° to 50° from early morning to late afternoon.

15 minutes: 42°, Fort Assiniboine, Montana, Jan. 19, 1892 from -5° to 37°

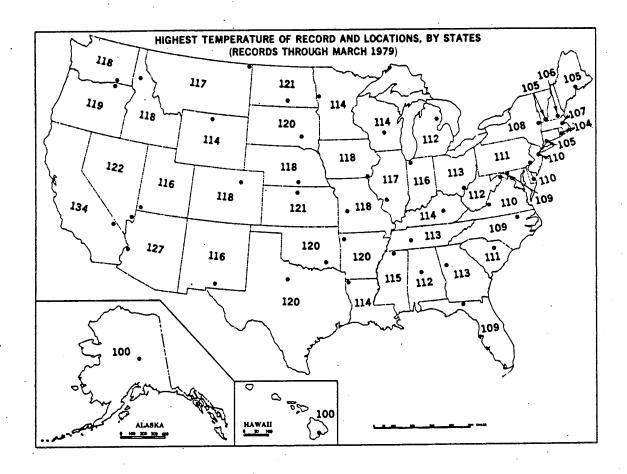

34°, Kipp, Montana, Dec. 1, 1896. The observer also reported that a total rise of 80° occurred in a few hours and that 30 inches of snow disappeared in one-half day.

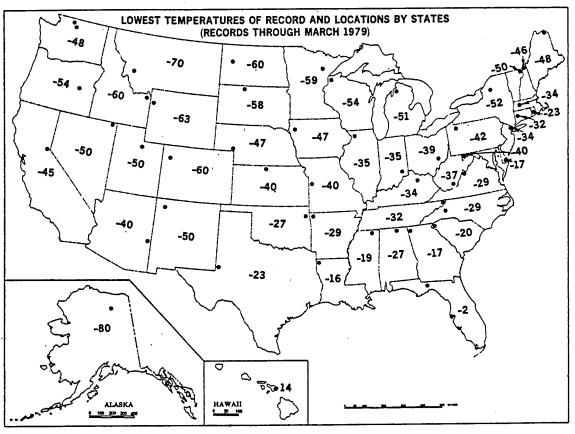

49°, Spearfish, South Dakota, Jan. 22, 1943 from -4° at 7:30 a.m. to 45° at 7:32 a.m.

RECORD HIGHEST TEMPERATURES BY STATE

State	Temp.	Date	Station	Elevation Feet
Alabama	112	Sept. 5, 1925	Centerville	345

TEMPERATURE EXTREMES, LOWEST

The lowest temperature on record in the United States, -79.8°, was observed at Prospect Creek Camp in the Endicott Mountains of Northern Alaska (Latitude 66° 48'N, Longitude 150° 40'W) on January 23, 1971. The lowest ever recorded in the conterminous 48 States, -69.7°, was observed at Rogers Pass, in Lewis and Clark County, Montana on January 20, 1954. Rogers Pass is in mountainous and heavily forested terrain about one-half mile east of and 140 feet below the summit of the Continental Divide.

The lowest annual normal (1941-70 mean) temperature in the United States is 9.3° for Barrow, Alaska which lies on the Arctic coast. Barrow also has the coolest summers (June-August) with a normal temperature of 36.4°. The lowest winter (December-February) normal temperature in the United States is -15.7° for Barter Island on the Arctic coast of northeast Alaska.

In the 48 conterminous States, Mt. Washington, New Hampshire (elevation 6,262 feet) has the lowest annual normal temperature 26.9° and the lowest normal summer temperature, 46.8°. A few stations in the Northeastern United States and in the upper Rocky Mountains have normal annual temperatures in the 30's; summer normal temperatures at these same stations are in the low 50's. Winter normal temperatures are lowest in northeastern North Dakota, 5.6° for Langdon Experiment Farm, and in northwestern Minnesota, 5.3° for Hallock.

In the continental areas of the Temperate Zone, 40° to 50° temperature falls in a few hours caused by advection of cold air masses are not uncommon. Sometimes these large temperature changes due to advection are followed by additional heat loss through radiation and result in remarkable temperature falls. Some outstanding temperature falls are:

24 hours: 100°, Browning, Montana, Jan. 23-24, 1916, from 44° to -56°

12 hours: 84°, Fairfield, Montana, Dec. 24, 1924, from 63° at noon to -21°

at midnight

2 hours: 62°, Rapid City, South Dakota, Jan. 12, 1911, from 49° at 6 a.m.

to -13° at 8 a.m.

27 minutes: 58°, Spearfish, South Dakota, Jan. 22, 1943, from 54° at 9 a.m. to

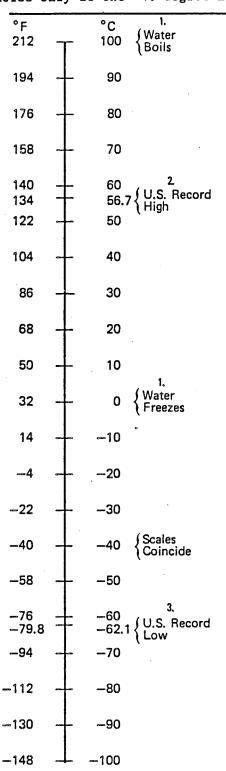

-4° at 9:27 a.m.

15 minutes: 47°, Rapid City, South Dakota, Jan. 10, 1911, from 55° at 7 a.m.

to 8° at 7:15 a.m.

TEMPERATURE CONVERSIONS

Temperatures in this publication are given in degrees Fahrenheit (°F). The Celsius (C) temperature scale, also called Centigrade, is used in most countries of the world. A temperature conversion scale is shown on the left. Note that the values coincide only at the -40 degree mark.

The standard formulas to convert °F to °C and °C to °F are shown below:

$$^{\circ}F = 9/5 ^{\circ}C + 32$$

$$^{\circ}C = 5/9 (^{\circ}F - 32)$$

Alternate, easy to remember conversion methods follow:

$$^{\circ}F = 9/5 (^{\circ}C + 40) - 40$$

$$^{\circ}C = 5/9 (^{\circ}F + 40) - 40$$

To use the alternate conversion formulas for converting from one scale to the other:

- (a) add 40 to the value to be converted
- (b) multiply that sum by the fraction: (5/9 for °F to °C) (9/5 for °C to °F)
- (c) subtract 40 from the product

For example, to convert 68°F to °C:

- (a) add 40: 68+40 = 108
- (b) multiply the sum by 5/9 (°F to °C): 5/9x108 = 60
- (c) subtract 40: 60-40 = 20
- (d) answer: $68^{\circ}F = 20^{\circ}C$
- 1. Under Standard Sea Level Pressure
- 2. Greenland Ranch, California July 10, 1913
- 3. Prospect Creek Camp, Alaska January 23, 1971

SUBJECT: State Temperature Extremes

The following changes should be made to Environmental Information Summary C-5, "Temperature Extremes in the United States":

State	Temp (°F)	Date	Station	Elevation (feet)					
Record Highest Temperature by State									
Georgia	112	July 24, 1952	Louisville	132					
Record Lowest Temperature by State									
Hawaii	12	May 17, 1979	Mauna Kea Obs 111.2	13,770					
Massachusetts	- 35	January 12, 1981	Chester	640					
South Carolina	-13	January 26, 1940	Longcreek (near)	1,631					

These changes will be incorporated in a revision to be issued in July 1983.
