### Acknowledgments

This Index began in the context of two larger endeavors financed by the National Science Foundation at the University of Washington: the Treaty Information Project, directed by Professor Peter H. Rohn, and the Ocean Law Program, directed by Professor William T. Burke. Work on this revision of the Index was completed under the Sea Grant Program of the National Oceanic and Atmospheric Administration, Department of Commerce under Grant 1-35320.

For their valuable assistance, I am indebted to Barbara Randall for computer programming and to Clare Gamble for typing and clerical help. I also wish to thank the many individuals who completed evaluation questionnaires about the preliminary edition of this Index.

## I. INTRODUCTION: THE INDEX AND ITS USE

### Background

This Index was developed in response to the proliferation of marine matters being dealt with by treaties. The large number of marine treaties created a need for an efficient way to locate detailed, substantive information contained in the treaties. Since most writing in the marine affairs area has dealt with a select few treaties, e.g., the 1958 Geneva Conventions, the S.O.L.A.S. Conventions, and several institution-creating treaties, the principal value of this Index will probably be access to hundreds of lesser known marine treaties.

### Coverage

The Index includes all marine treaties found in volumes 1-643 of the United Nations Treaty Series (UNTS), in the Canadian Treaty Series (CTS) 1946-1967, and in the United States Treaty Series (TIAS) 1950-1970. The UNTS was consulted first, then the CTS and TIAS to fill in omissions. Thus the Index in its present form includes most of the world's marine treaties and virtually all marine treaties to which the United States and/or Canada are party.

In developing an index like this, it was necessary to formulate a concrete definition of "marine." Marine has been defined here as including the following:

- a. fisheries and fishing
- b. oceans and ocean resources
- c. frontier waters (oceans and rivers)
- d. navigation (not including commerce and trade)
- e. water vessel operation

Obviously these categories are not completely distinct. There are bound to have been judgmental errors of inclusion or exclusion. Doubts about coverage can be resolved by consulting Section III, which contains a listing of all treaties included. A brief look at this will provide the user with a feel for the type of information contained in the Index.

About 400 treaties are included, varying greatly in length and relevance of content. The average treaty required about eleven entries (combinations of two to four words) to represent its content. Throughout the coding of the treaties, it was necessary to make decisions about how much detail to include. The amount of detail was dependent upon how closely treaties corresponded to the criteria specified above. Another facet of the detail problem was proper names. Generally speaking, the criterion applied was this: if the name of a river, lake, etc. appears in the headnote of the treaty, it was included in the Index and can be used to find a reference.

The list of words (dictionary) by which the content of treaties is represented was inductively produced--that is, during the coding process, words were added as needed. The dictionary totaled about 750 words by the time the last treaty was coded. About one-third of these words are suitable for referencing the content. For example, the words "action," "disease," "equal," "meeting," and "regulation" are in the dictionary, but none of them is used as the initial word by which an entry is alphabetized. The list of words used to alphabetize entries can be found in Section II (page 5).

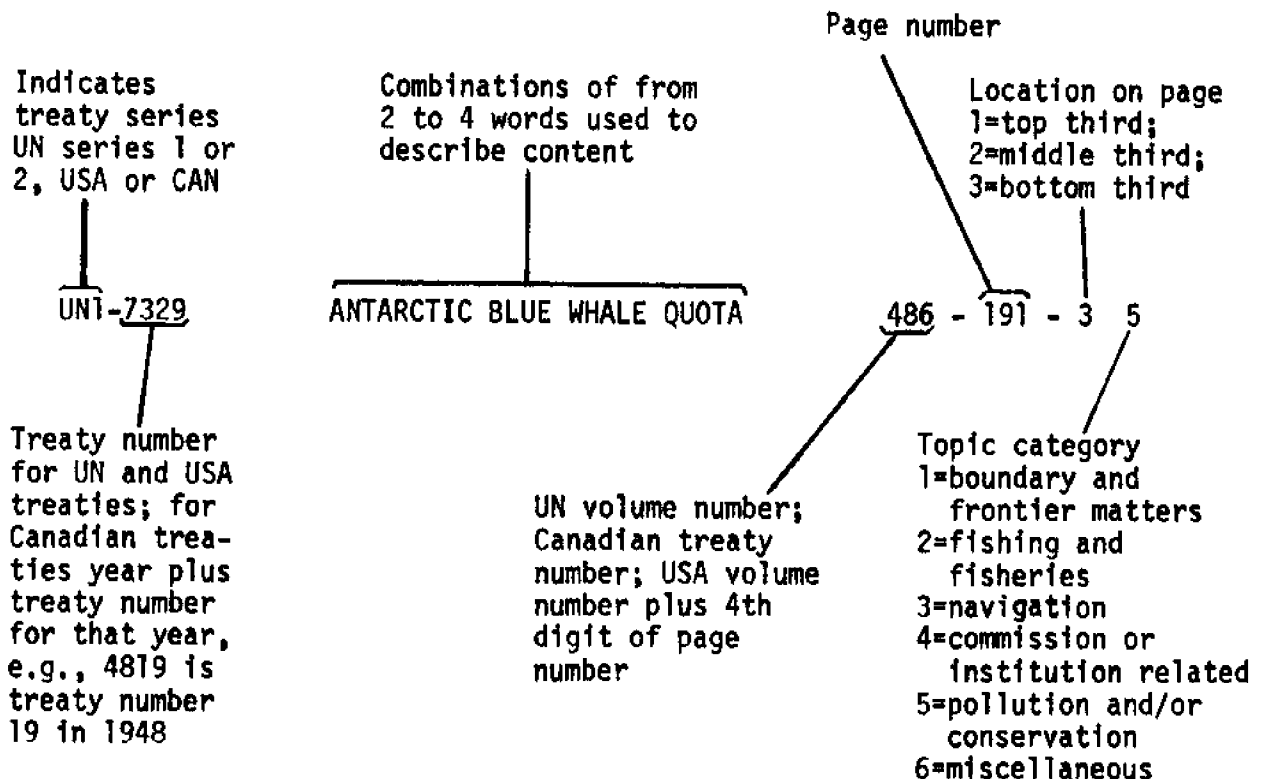

### Organization and Use of the Index

The Index itself is divided into three sections, each of which contains the same information arranged in different ways. Index - Part 1 is ordered alphabetically by content. Index - Part 2 is ordered first by treaty number and then

alphabetically by content. Index - Part 3 is divided into broad topical areas, boundary and frontier matters, fishing and fisheries, navigation, commission or institution related, pollution and/or conservation, and miscellaneous; then entries in each category are alphabetized.

The section of the Index used depends upon the type of information sought. If the user is interested in a specific type of information (e.g., salmon fishing), Part 1, the alphabetical section, should be consulted. If the needed information deals with a certain country or one particular treaty, it probably would be preferable to use Parts 2 and 3 perhaps first checking the listing of country treaty obligations. It is impractical to provide exact rules for using the Index. A little experimentation with the three sections should suggest the best approach for meeting individual requirements.

The following example will serve to illustrate the format of entries encountered in the Index.

It is regrettable that volume and page locations could not be presented in a completely comparable fashion--the difficulty is due both to the awkward way the Canadian Treaty Series is catalogued and to the great length of many TIAS (US Treaty Series) volumes. Entries appear in the Index in all meaningful alphabetical orders. The preceding entry would be indexed thrice, under ANTARCTIC, BLUE, and WHALE. When using the Index, the reader must bear in mind these changes in word order; otherwise confusion about the meanings of entries could result.
