

## ERRATA

Correct units within the first paragraph of page 89 as follows

...The nominal exposure concentrations of 0, 0.05, 1, 100, and 300 micrograms 4-nonylphenol per liter did not closely bracket FDEP's proposed criteria of 1.7 micrograms per liter. The 1 microgram per liter exposure did not differ significantly from the control while exposures at 100 micrograms per liter reduced fertilization rates by nearly half ...
