Acknowledgements

This project could not have been completed without the assistance of many individuals from the Department of Natural Resources. Chris Bonzek supplied the computer expertise; and David Burke provided guidance and encouragement which were essential to completion of this project.

Thanks to the reviewers of this list: Ralph Tiner, Starwyn G. Shelter, and Porter Reed. Special thanks to William Sipple and Daniel Boone who co-edited this document, without their expertise this project would not have become a reality. Also thanks to Deborah Washington for patiently typing this document and to all those within the Department of Natural Resources who provided encouragement and assistance.

INTRODUCTION

Background

This report was produced through the Maryland Non-Tidal Wetlands Management Program. The Program was created to facilitate the voluntary efforts of local governments, citizens and environmental groups in the protection of non-tidal wetlands. One of the major objectives of the Non-Tidal Wetlands Program is the training and education of these groups to assist in identification and management of this resource. A series of training and education workshops have been developed for the purpose of transferring technical information, which can be used by individuals, in the field identification and delineation of non-tidal wetlands. One of the technical workshops specifically addresses techniques for determining the presence of wetland plant species. The ability to distinguish wetland plants is critical in determining whether or not an area may be classified as a wetland.

This report provides a comprehensive list of vascular plant species occurring in Maryland wetlands. The narrative portion contains a full explanation of the wetland concept and how this plant list should be used in conjunction with other technical information to identify wetland areas. A section describing the development, limitations and uses of the list, further explores the practical applications of this publication. The plant list itself contains useful information about each plant species and the frequency of its occurrence in wetlands. A subsequent publication will provide a detailed wetland field identification process.

Through the use of this document, it is hoped that the reader will become familiar with the broad range of plant species in both tidal and non-tidal wetlands in the State of Maryland.

The Wetland Concept

Many of us have enjoyed a walk down a gently sloping forest into a meadow characterized by spongy organic soil; mounds of sphagnum moss; crayfish burrows; pools of standing water and plant species such as: cattails, lizard's tails and bald cypress. We intuitively know this area as a wetland.

In a technical sense, wetlands are identified through a careful examination of the vegetation, soils and hydrology of a given area. "In general terms, wetlands are lands where saturation with water is the dominant factor determining the nature of soil development and the types of plant and animal communities living in the soil and on its surface. The single feature that most wetlands share is soil or substrate that is at least periodically saturated with or covered by water. The water creates severe physiological problems for all plants and animals except those that are adapted for life in water or in saturated soil."¹

Historically, the wetland concept has had many definitions and corresponding classification systems. The United States Fish and Wildlife Service (USFWS) has been promoting a wetland definition and classification system since 1979, which is described in the publication entitled Classification of Wetlands and Deepwater Habitats of the United States (Cowardin

et al., 1979). Due to the complexity and unavoidable use of wetland terminology utilized throughout the text, the reader should reference this publication. This publication is an interpretive guide to the classification system and symbols used to describe the wetland systems depicted on the National Wetlands Inventory (NWI) Maps. The NWI maps for the State of Maryland are available through the Department of Natural Resources, Water Resources Administration.

The USFWS classification system has been developed to standardize wetlands classification nationwide. The Maryland Non-Tidal Wetlands Management Program has been promoting and teaching the USFWS wetlands concept and classification system in Maryland. The USFWS system defines wetlands as; "... lands transitional between terrestrial and aquatic systems where the water table is usually at or near the surface or the land is covered by shallow water. For purposes of this classification, wetlands must have one or more of the following three attributes: (1) at least periodically, the land supports predominantly hydrophytes; and (2) the substrate is predominantly undrained hydric soil; (3) the substrate is nonsoil and is saturated with water or covered by shallow water at some time during the growing season of each year."²

To emphasize the importance of wetland hydrology as the requisite characteristic of wetlands and to distinguish between "tidal" and "non-tidal" wetlands in Maryland, the authors of this paper have developed a specific definition for non-tidal wetlands, which is a variation of the wetland definition presented by Cowardin et al., 1979. This definition and others are presented below:

"Non-Tidal Wetland": Includes the following wetland classes as defined by the USFWS: palustrine aquatic bed, palustrine emergent, palustrine forested and palustrine scrub-shrub excluding tidal wetlands, as defined below. These wetland classes are lands where the water table is usually at or near the surface (i.e. periodically saturated); or lands where the substrate or soil is covered by shallow water at sometime during the growing season. These lands are usually further characterized by one or both of the following attributes:

- (1) At least periodically, the land supports predominantly hydrophytes; and,
- (2) The substrate is predominantly undrained hydric soil.

Hydrophyte: "Any plant cited in Vascular Plant Species Occurring in Maryland Wetlands which is "... growing in water on a substrate that is at least periodically deficient in oxygen as a result of excessive water content (plants typically found in wet habitats)."³

Hydric soil: "Soil that is wet long enough to periodically produce anaerobic conditions, thereby influencing the growth of plants."⁴

Hydrology: "The duration and timing of surface inundation, both yearly and long term and the fluctuations of ground-water."⁵

Palustrine: " The Palustrine System (Fig. 6) includes all non-tidal wetlands dominated by trees, shrubs, persistent emergents,

emergent mosses or lichens, and all such wetlands that occur in tidal areas where salinity due to ocean-derived salts is below 0.5‰. It also includes wetlands lacking such vegetation, but with all of the following four characteristics: (1) area less than 8 ha (20 acres); (2) active wave-formed or bedrock shoreline features lacking; (3) water depth in the deepest part of basin less than 2 m at low water; and (4) salinity due to ocean-derived salts less than 0.5‰."⁶

Tidal Wetlands: Any land considered "private wetland" or "state wetland" pursuant to Title 9, Wetland and Riparian Rights of the Natural Resources Article Annotated Code of Maryland (1983 Replacement Vol.).

Riverine wetlands, lacustrine wetlands and palustrine open water wetlands have not been included under the definition of "non-tidal" wetlands. In Maryland, generally, most of the riverine wetlands containing aquatic or emergent plant species are found within tidally influenced reaches of perennial stream systems and are therefore regulated under the Tidal Wetlands Act of 1970. The remaining non-tidal riverine classes are regulated under the Water Resources Administration, Watershed Permits Program. Lacustrine and palustrine open water wetlands are nearly all man made in Maryland, and function largely as drinking water reservoirs, public or private lakes (lacustrine areas), or as farm ponds for stock watering and/or waterfowl habitats (palustrine open water areas). These areas, while valuable in their own right, are heavily man-dominated and are controlled or regulated under other programs.

Information Sources

This publication has been created through a cooperative effort between the Coastal Resources Division and the Natural Heritage Program within the Maryland Department of Natural Resources (DNR); and the United States Fish and Wildlife Service.

Many of the species incorporated in this publication were taken from the northeast regional wetland plant list prepared by the USFWS. Using this as a base, DNR staff systematically added and deleted species as appropriate from in-house records, taxonomic manuals and previous taxonomic inventories by William Sipple, Jack McCormick and Roy Metzgar. (Appendix F, the bibliography, includes these publications.) The list was then reviewed by botanical experts from the private sector, state and federal government.

The format and procedure used in compiling this list was developed by Porter Reed, Wetlands Biologist of the USFWS. The United States Department of Agriculture, Soil Conservation Service's, National List of Scientific Plant Names, Volumes 1 and 2, was used as the sole source concerning nomenclature.

Uses

The list of vascular plant species occurring in Maryland wetlands was created to serve a number of purposes. Some of these purposes have been

discussed previously, such as: (1) the use of this publication in conjunction with other technical information in the identification and delineation of wetlands, and (2) how this publication helps promote the uniform classification of wetlands described in the Classification of Wetlands and Deepwater Habitats of the United States (Cowardin et al., 1979) currently being used by the USFWS and the Maryland Non-Tidal Wetlands Management Program.

This publication may also serve other valuable functions. Local governmental jurisdictions may use this document to better articulate a definition of wetlands as it might appear in zoning or subdivision regulations. For example, a certain number of common wetland plant species may be extracted from the list contained in this report and cited directly within the body of the zoning or subdivision text. On the other hand, a community may further strengthen an ordinance and include all wetland types by referencing the definition of a hydrophyte presented earlier in this report. This would assure the community that the complete spectrum of plants which may occur in, or dominate a wetland, are by reference, incorporated into their wetland definition.

Finally, this publication is the first statewide taxonomic inventory of plants occurring in Maryland wetlands. Because any plant which occurs in a wetland is contained in this list, an extensive number of species are enumerated.

The reader should also be aware of an additional publication produced by the Maryland Non-Tidal Wetlands Management Program entitled: Non-Tidal Wetlands Protection: A Handbook for Maryland Local Governments. This publication discusses wetland values; threats to wetlands; and protection standards and techniques. Additionally, a model ordinance is included to illustrate how interested parties can protect non-tidal wetlands. A more recent update of this model ordinance is available through the Department.

Limitations

Although the plant list contained in this report provides important information, the reader may become aware of certain limitations. For example, the plant list has not been categorized by physiographic region, therefore, the user may be overwhelmed by a great number of plant species which are not even applicable to the area under investigation. As the user becomes more familiar with local plant species, this limitation will diminish. Difficulties may also arise in the identification of plant species. For example, there are 78 species of *Carex* (sedges) which often resemble one another. In this case, the services of a professional botanist or one skilled in plant identification may be necessary. However, in most cases, it is probably not necessary to identify each specific plant in a given area, but it is important to identify the dominant or most abundant plant species.

Finally, it is essential for the user not to use this publication as a sole reference in the identification and delineation of wetlands. The plant list is merely one part of the body of technical information to be utilized in an overall process of wetland classification. Other references addressing soils characteristics and hydrology should also be consulted.

PLANT LIST TERMINOLOGY

Overview of Plant List Categories and Descriptive Terms

This publication consists of two complete species listings: a species listing alphabetized by scientific name, and a species listing alphabetized by common name. The list includes five categories: identification number, species and author name, common name, indicator status, and rarity rankings. Two categories (indicator status and rarity) use certain descriptive terms to provide further clarification. Table 1 briefly defines each category and descriptive term used to describe a given plant species. In the future, additional categories may be added to the list such as: water chemistry modifiers, dominant wetland plant species, and physiographic locations of each species. This publication is confined to include only vascular plants because of the lack of information concerning non-vascular plants.

TABLE 1

Abbreviated Definitions of Plant List Categories

IDENTIFICATION NUMBER = Number assigned to an individual plant species.

SPECIES AND AUTHOR NAME = Latin taxonomic classification of a plant species and the name of the person or persons who placed the given plant within the genus and specific epithet designated.

COMMON NAME = Non-technical or English name for a given plant.

INDICATOR STATUS = Designates the occurrence percentage of a given species in a wetland throughout its range in Maryland.

OBL = Obligate (greater than 99%).

FACW = Facultative Wetland (greater than 66-99%).

FAC = Facultative (33%-66%).

FACU = Facultative Upland (1% - less than 33%).

DRA = Drawdown (typically found in wetlands during their drawdown phase).

RARITY = Abundance of given plant species in Maryland. Information is confined to those species which are rare, threatened or endangered.

A1 = Critically endangered throughout range.

A2 = Endangered throughout range.

A3 = Rare throughout range.

B1 = Threatened regionally and critically state rare.

B2 = Critically state rare.

B3 = State rare.

Detailed Explanation of Plant List Categories and Descriptive Terms

The narrative below describes in detail how each category and descriptive term should be interpreted and applied. In the computer printout all categories and descriptive terms have been printed in capital letters. Some of the descriptive terms have been abbreviated. The abbreviated terms appear in parentheses in this section, to acquaint the reader with the plant list format.

Identification Number. Each plant species has been assigned an identification number. Citation of species by number may be preferable for regulatory wetland definitions, than a complete species listing.

Species and Author Name. Scientific names for plants are composed of two parts, the genus or generic name and the specific epithet, which together form the species name. A complete scientific name must be followed by a third element, the author or authority who formally described the plant (Table 2 demonstrates an example of this format).

TABLE 2

Format of Species Name (Latin)

<u>Genus</u>	<u>Specific Epithet</u>	<u>Authority</u>
Acer	pennsylvanicum	Linnaeus

The genus or generic name is a singular noun, or word treated as a noun derived from Latin or Greek. Generic names arise from many sources and often describe, in a general way, the kind of plant being considered. The generic name is always capitalized. A few examples of generic names are: Acer, Aster, Cyperus, Iris, Quercus and Vaccinium. (See Appendix D - Part 1).

The specific epithet is commonly a descriptive adjective, but may also be a noun. The source of the specific epithet may be in honor of a person, or from an old common name, a geographic location, a characteristic of the plant, or it may even be composed arbitrarily. Specific epithets may be written in capital letters when the source is: a person's name, a former genus name, or a common name. However, they are generally written with a small initial letter (See Appendix D - Part 2).

The specific epithet and the generic name are normally underlined or printed in italics or boldface, when presented in a text.

The name of a person or persons following the species name indicates the authority or author who first described the plant. Often the authorities are abbreviated, such as L. for Linnaeus, or Schw. for Schweinity. Sometimes a species name will have two authorities, with the first in parenthesis. An example of this is Sabatia difformis (L.) Druce. In this case (L.) is for Linnaeus, who first described the plant and designated the specific epithet difformis. Linnaeus had placed this plant in a genus other than Sabatia and at some later time Druce transferred this species to Sabatia.

Besides the basic species names, each of which includes a generic name, specific epithet and authority, there are also examples of varieties (var.), subspecies (ssp.) and hybrids (x) on the list.

Sequentially, subspecies is a division of species and a variety is subordinate to subspecies. The terms subspecies, variety, and hybrids are defined below:

Subspecies: "A taxonomic category that is the lowest generally used taxon rank, immediately below a species. Subspecies designates a morphologically distinguishable group whose members are at least partially isolated geographically, but interbreed successfully with members of other subspecies of the same species where their ranges adjoin and overlap."⁷ An example from the list is Cornus foemina ssp. racemosa (Lam.) J.S.

Variety: "A category which is immediately inferior to a subspecies and does not result from geographic isolation. It is a group or kind of plant distinguished by characteristics such as flower color, which are to inconstant or too trivial to justify an individual species name."⁸ An example from the list is Cornus amonum var. obliqua (Raf.) J.S. Wilson.

Hybrids: "Result from the interbreeding of two usually distinct species or varieties. Their characteristics are in some ways a combination of those of the parents, but the plants are often more vigorous and floriferous."⁹ An example from the list is Dryopteris x bootii (Tuckerman) Underw.

Common Name. The use of common names in describing plant species is often very confusing due to the great variations in plant names between/within geographic regions. Generally, this report uses Gray's Manual of Botany as the primary source for citing common names. In several cases botanists reviewing this list have substituted locally common names for those contained in Gray's Manual.

Indicator Status. The indicator status category has been developed by Porter Reed of the USFWS, and used by DNR in development of this report. The primary function of the indicator status category is to better define environmental parameters in which plants typically grow. All plants listed have been grouped under one of the following indicator status categories: Obligate (OBL), Facultative Wetland (FACW), Facultative (FAC) and Facultative Upland (FACU).

Obligate (OBL). Plants designated as OBL are always found in wetlands under natural conditions. Specifically, greater than 99% of the time these plants occur in wetlands. These plants may persist in upland sites if planted there by man, or in wetland sites which have been drained, filled or otherwise transformed into upland sites. Examples from the list include: Cephalanthus occidentalis L., Iva frutescens L., and Spartina alterniflora Loisel.

Facultative Wetland (FACW). Plants designated as FACW are usually found in wetlands. Specifically, greater than 66-99% of the time these plants occur in wetlands. Examples from the list include: Asclepias incarnata L., Betula nigra L., and Impatiens capensis Meerb.

Facultative (FAC). Plants designated as FAC are sometimes found in wetlands. Specifically, 33-66% of the time these plants occur in wetlands. Examples from the list include: Lindera benzoin (L.) Blume, Polygonum pennsylvanicum L., and Toxicodendron radicans (L.) O. Kuntze.

Facultative Upland (FACU). Plants designated as FACU are seldom found in wetlands. Specifically, 1 - less than 33% of the time these plants occur in wetlands. They are more typical of upland environments. Examples from the list include: Betula alleghaniensis Britton, Fagus grandifolia Ehrh., and Prunus serotina Ehrh.

Drawdown (DRA). Some wetland plant species establish themselves only when a wetland is temporarily dry as in the cases of mud flats, vernal pools, and intermittent playa lakes. These species are known as drawdown species. However, these drawdown species will not persist if saturated conditions return to the wetland at least periodically. A species designated as FACW DRA (Facultative Wetland Drawdown) is a species which is a Facultative Wetland plant which grows in a drawdown environment, but is not restricted to a drawdown environment. Examples from the list include: Ammania coccinea Rottb. (OBL DRA), Fimbristylis autumnalis (L.) R. & S. (FACW DRA), and Leersia hexandra Swartz (OBL DRA).

Rarity. The rarity classification system used in this document was developed by the Maryland Natural Heritage Program. This classification system is based on the following parameters:

1. Estimated number of total occurrences of the species anywhere in world.
2. The total range of the species and what type of distribution it has (spotty, even, etc.).
3. Estimated number of adequately protected occurrences of this species in the state.
4. The degree to which the species is directly or indirectly threatened by destruction.
5. The ecological fragility of a species. Some species are more adaptable and capable of dealing with greater environmental stress.

After all the above information has been gathered, species are placed in categories according to the degree to which they are rare, threatened or endangered. It is important to note that this is a very dynamic classification system which is constantly being updated. For the most current information on the status of a plant species, the Maryland Natural Heritage Program should be contacted. In addition, the reader should also be aware of a publication by the Maryland Natural Heritage Program entitled: Threatened and Endangered Plants of Maryland (Nordon, et al. Editors, 1984).

The descriptive terms used in identifying the degree of rarity include the following:

Critically endangered throughout range (A1). Generally, less than five occurrences worldwide. Species such as these may be endemic to small areas. Examples from the list include: Bacopa stragula Fern, Fimbristylis perpusilla Harper ex Small and Britton, and Ptilimnium fluviatile (Rose) Mathias.

Endangered throughout range (A2). Between six and twenty occurrences worldwide. Examples from the list include: Euphorbia purpurea (Raf.) Fern., Helonias bullata L., and Schwalbea americana L.

Rare throughout range (A3). Usually between twenty-one and one hundred occurrences worldwide and considered rare in nearly every state within its range. Examples from the list include: Bidens bidentoides (Nutt.) Britt. Carex barrattii Schweinitz and Torr., and Plantago cordata Lam.

Threatened regionally and critically state rare (B1). Threatened regionally and critically state rare means that the species is rare within Maryland, as well as, rare in the adjacent areas of nearby states. Examples from the list include: Arundinaria gigantea (Walt.) Muhl., Juncus militaris Bigel., and Rynchospora filifolia Gray.

Critically rare (B2). This category pertains to species which are generally known from one to five sites within Maryland. Examples from the list include Carex bullata Schkuhr, Hottonia inflata Ell., and Sclerolepis uniflora (Walt.) B.S.P.

State rare (B3). This category pertains to species which occur in six to ten sites within Maryland. Examples from the list include: Carex lanuginosa Michx. Cyperus tenuifolius (Steud.) Dandy, and Juncus pelocarpus E. Mey.

Statistical Summary

The Vascular Plant Species Occurring in Maryland Wetlands contains 1,219 plant species, ranging from those species which are permanent inhabitants of wetlands (Obligates), to those plants which are seldom found in wetlands (Facultative Upland). Of the 1,218 species, 45% (approx.) are classified as Obligates, 22% (approx.) are classified as Facultative Wetland, 23% (approx.) are classified as Facultative and 11% (approx.) are classified as Facultative Upland.

Due to the distinct nature of Maryland's wetlands, many rare, threatened and endangered plants are found within these ecosystems. A total of 260 or 21% (approx.) of the plants listed within this publication are in one degree or another rare, threatened or endangered. These plants have been designated as such by the Maryland Natural Heritage Program. (Information for the statistical summary was derived from statistical tables included in Appendix C.)

APPENDIX B

VASCULAR PLANT SPECIES OCCURRING IN MARYLAND WETLANDS
BY COMMON NAME

VASCULAR PLANT SPECIES
OCCURRING IN MARYLAND WETLANDS

ID NUMBER	COMMON NAME	SPECIES & AUTHOR NAMES	INDICATOR STATUS	RARITY
10	AGALINIS, PURPLE	AGALINIS PURPUREA RAF.	FACW	
9	AGALINIS, SEA-SIDE	AGALINIS MARITIMA (RAF.) RAF	OBL	
11	AGRIMONY	AGRIMONIA GRYPOSEPALA WALLR.	FAC	
12	AGRIMONY, ROADSIDE	AGRIMONIA ROSTELLATA WALLR.	FAC	
13	AGRIMONY, SMALL-FLOWERED	AGRIMONIA PARVIFLORA AIT.	FACW	
24	ALDER, COMMON	ALNUS SERRULATA (AIT.) WILLD.	OBL	
22	ALDER, SEASIDE	ALNUS MARITIMA (MARSH.) MUHL.	FACW	B1
23	ALDER, SPECKLED	ALNUS RUGOSA (DUROI) SPRENG.	FAC	
1216	ALEXANDERS, GOLDEN	ZIZIA AUREA (L.) KCH	OBL	
878	ALKALIGRASS, TORREY	PUCCINELLIA FASCICULATA (TORR.) BICKN.	OBL	
877	ALKALIGRASS, WEEPING	PUCCINELLIA DISTANS (L.) PARL.	OBL	
29	ALLIGATORWEED	ALTERNANTHERA PHILOXEROIDES (MART.) GRISER.	OBL	
504	ALUMROOT, AMERICAN	HEUCHERA AMERICANA L.	FACU	
33	AMARANTH, PALMER	AMARANTHUS PALMERI S. WATS.	FACU	
35	AMARANTH, REDROOT	AMARANTHUS RETROFLEXUS L.	FAC	
34	AMARANTH, SEABEACH	AMARANTHUS PUMILUS RAF.	FAC	
36	AMARANTH, SPINY	AMARANTHUS SPINOSUS L.	OBL	A2
44	AMANNIA, KOEHNE'S	AMANNIA LATIFOLIA L.	FACU DRA	B2
43	AMANNIA, PURPLE	AMANNIA COCCINEA ROTTB.	OBL DRA	B2
50	AMPHICARPUM, PURSH'S	AMPHICARPUM PURSHII KUNTH	FACW	B2
56	ANEMONE, CANADA	ANEMONE CANADENSIS L.	FAC	B2
58	ANGELICA, FILMY	ANGELICA TRIQUINATA MICHX.	FACW	B2
768	ARROW-ARUM	PELTANDRA VIRGINICA (L.) KUNTH.	OBL	B2
1131	ARROW-GRASS	TRIGLOCHIN STRIATUM RUIZ & PAVON	OBL	B1
1130	ARROW-GRASS, SEA-SIDE	TRIGLOCHIN MARITIMUM L.	OBL	
1175	ARROW-WOOD	VIBURNUM DENTATUM L.	FAC	
1180	ARROW-WOOD	VIBURNUM RECOGNITUM FERNALD	FACW	
969	ARROWHEAD, BROADLEAF	SAGITTARIA LATIFOLIA WILLD.	OBL	
970	ARROWHEAD, EUR	SAGITTARIA RIGIDA PURSH	OBL	
966	ARROWHEAD, COASTAL	SAGITTARIA FALCATA PURSH	OBL	
964	ARROWHEAD, ENGELMANN	SAGITTARIA ENGELMANNIANA J.G.SMITH	OBL	R1
967	ARROWHEAD, GRASSY	SAGITTARIA GRAMINEA MICHX.	OBL	B3
967	ARROWHEAD, HOODED	SAGITTARIA CALYCINA ENGELM.	OBL	B1
963	ARROWHEAD, HOODED	SAGITTARIA CALYCINA ENGELM.	OBL	
965	ARROWHEAD, LONG-BEAKED	SAGITTARIA ENGELMANNIANA S.S.P. LONGIROSTRA (MICHELE) BOGIN	OBL	
971	ARROWHEAD, OWLEAF	SAGITTARIA SUBULATA (L.) BUCK.	OBL	
500	ARTICHOKE, JERUSALEM	HELIANTHUS TUBEROSUS L.	FAC	
450	ASH, BLACK	FRAXINUS NIGRA MARSHALL	OBL	B1
452	ASH, PUMPKIN	FRAXINUS PROFUNDA (BUSH) RUSH	OBL	
451	ASH, RED	FRAXINUS PENNSYLVANICA MARSH.	FACW	
449	ASH, WHITE	FRAXINUS AMERICANA L.	FACU	
845	ASPEN, BIGTOOTH	POPULUS GRANDIDENTATA MICHX.	FACU	
92	ASTER, ANNUAL SALT MARSH	ASTER SUBULATUS MICHX.	OBL	
83	ASTER, BUSH	ASTER DUMOSUS L.	FAC	
84	ASTER, CALICO	ASTER LATERIFLORUS (L.) BRITT.	FACW	
88	ASTER, CROOKED-STEMMED	ASTER PRENANTHOIDES MUHL.	FAC	
95	ASTER, FLATTOP	ASTER UMBELLATUS P.MILL.	FACW	
91	ASTER, LOWLAND WHITE	ASTER SIMPLEX WILLD.	FACW	
85	ASTER, NEW ENGLAND	ASTER NOVAE-ANGLIAE L.	FACW	
86	ASTER, NEW YORK	ASTER NOVI-BELGII L.	FACW	
90	ASTER, ROUGH	ASTER RADULA AIT.	OBL	
93	ASTER, SLENDER-LEAVED	ASTER TENUIFOLIUS L.	OBL	B2
96	ASTER, SMALL WHITE	ASTER VIMINEUS LAM.	FAC	
89	ASTER, SWAMP	ASTER PUNICEUS L.	FACW	

VASCULAR PLANT SPECIES
OCCURRING IN MARYLAND WETLANDS

ID NUMBER	COMMON NAME	SPECIES & AUTHOR NAMES	INDICATOR STATUS	RARITY
94	ASTER, TRADESCANT	ASTER TRADESCANTII L.	FACW	
87	ASTER, WHITE HEATH	ASTER PILOSUS	FAC	
472	AVENS, ALLEPO	GEUM ALEPPICUM JACQ.	OBL	R2

919	AZALEA, SWAMP	RHODODENDRON VISCOSUM (L.) TORR.	FACW	
105	BACCHARIS, EASTERN	BACCHARIS HALIMIFOLIA L.	FAC	
106	BACOPA, COAST	BACOPA MONJERI WETTST.	OBL	B2
871	BALD RUSH, LONG BEAKED	PSILOCARYA SCRIFOIDES TORR.	OBL DRA	B2
870	BALD RUSH, SHORT-BEAKED	PSILOCARYA NITENS (VAHL) WOOD	OBL DRA	B1
1111	BALDCYPRESS, COMMON	TAXODIUM DISTICHUM (L.) RICH	OBL	
1053	BAMBOO-VINE	SMILAX LAURIFOLIA L.	OBL	
108	BARTONIA, SCREW-STEM	BARTONIA PANICULATA (MICHX.) MUHL.	OBL	
109	BARTONIA, YELLOW	BARTONIA VIRGINICA (L.) B.S.P.	FAC	
881	BASIL, VIRGINIA	PHYCANTHEMUM VIRGINIANUM (L.) DURAND & JACKSON	FACU	B3
1122	BASSWOOD	TILIA AMERICANA L.	FACU	
703	BAYBERRY, EVERGREEN	MYRICA HETEROPHYLLA RAF.	FAC	
704	BAYBERRY, NORTHERN	MYRICA PENNSYLVANICA LOISEL.	FAC	
45	BEACHGRASS	AMMOPHILA BREVILIGULATA FERN.	FAC	
929	BEAKRUSH, DROWNED	RHYNCHOSPORA INUNDATA (OAKES) FERN.	OPL	A3
926	BEAKRUSH, PINEHILL	RHYNCHOSPORA GLOBULARIS (CHAPM.) SMALL	FACW	
933	BEAKRUSH, THREAD-	RHYNCHOSPORA RARIFLORA (MICHX.) ELLIOTT	OBL	B1
134	BEAKSEED, THREADLEAF	BULEOSTYLIS CAPILLARIS (L.) C.P. CLARKE	FACW	
417	BEARDGRASS, WOLLY	ERIANTHUS BREVIBARBIS MICHX.	OBL	
419	BEARDGRASS, WOOLY	ERIANTHUS GIGANTEUS (WALTER) MUHL.	OPL	
457	BEDSTRAW, PLUNTLEAF	ERIANTHUS GIGANTEUS (WALTER) MUHL.	FACU	
455	BEDSTRAW, CATCHWEED	GALIUM OPTUSUM BIGELOW	FACU	
459	BEDSTRAW, DYE	GALIUM APARINE L.	FACW	
456	BEDSTRAW, ROUGH	GALIUM TINCTORIUM L.	FAC	
460	BEDSTRAW, SMALL	GALIUM ASPRELLUM MICHX.	FACW	
461	BEDSTRAW, SWEET-SCENTED	GALIUM TRIFIDUM L.	OBL	
458	BEEBALM, WILDBERGAMOT	GALIUM TRIFLORUM MICHX.	FACU	
685	BEECH, AMERICAN	MONARDA FISTULOSA L.	FACU	
123	BEGGARTICKS, BUR	FAGUS GRANDIFOLIA EHRH.	FACU	
120	BEGGARTICKS, DEVILS	BIDENS TRIPARTITA L.	OBL	
119	BEGGARTICKS, NODDING	BIDENS FRONDOSA L.	OBL	
116	BEGGARTICKS, SMALL	BIDENS CERNUA L.	OBL	B2
115	BEGGARTICKS, SWAMP	BIDENS DISCOIDEA (T. & G.) BRITT.	FACW	
1154	BELLFLOWER, BEDSTRAW	BIDENS RIPINNATA L.	FACW	
15	BENTGRASS, AUTUMN	BIDENS BIDENTOIDES (NUTT.) BRITT.	OBL	A3
16	BENTGRASS, CARPET	CAMPANULA APARINOIDES PURSH	FACU	
14	BENTGRASS, WINTER	UVULARIA PURERULA MICHX.	FACU	
113	BIRCH, RIVER	AGROSTIS PERENNANS (WALTER) TUCKERMAN	FACW	
112	BIRCH, SWEET	AGROSTIS STOLONIFERA L.	FACW	
111	BIRCH, YELLOW	AGROSTIS HIEMALIS (WALT.) R.S.P.	FAC	
153	BITTERCRESS, CUCKOO	BETULA NIGRA L.	FACW	
		BETULA LENTA L.	FACW	
		BETULA ALLEGHANIENSIS BRITTON	FACU	
		CARDAMINE PRATENSIS L.	OBL	B1

VASCULAR PLANT SPECIES
OCCURRING IN MARYLAND WETLANDS

ID NUMBER	COMMON NAME	SPECIES & AUTHOR NAMES	INDICATOR STATUS	RARITY
149	BITTERCRESS, DOUGLASS	CARDAMINE DOUGLASSII (TORR.) BRITT.	OBL	
150	BITTERCRESS, LONGI'S	CARDAMINE LONGII FERN.	CBL	
152	BITTERCRESS, PENNSYLVANIA	CARDAMINE PENNSYLVANICA MUHL. EX WILLD.	FAC	A3
151	BITTERCRESS, SMALL-FLOWERED	CARDAMINE PARVIFLORA L.	FAC	
728	BLACK-GUM	NYSSA SYLVATICA VAR. SYLVATICA MARSH.	FAC	
944	BLACKBERRY, SWAMP	RUBUS HISPIDUS L.	CBL	
946	BLACKKEYED SUSAN	RUBIFCKIA HIRTA L.	FACU	
1179	BLACKHAW	VITURNUM PRUNIFOLIUM L.	FAC	
1146	BLADDERWORT, FIBEROUS	UTRICULARIA FIBROSA WALTER	OBL	B3
1149	BLADDERWORT, FLOATING	UTRICULARIA INFLATA WALTER	OBL	B2
1147	BLADDERWORT, HIDDEN-FLOWER	UTRICULARIA GEMINISCAPA BFNJ.	OBL	
1145	BLADDERWORT, HORNED	UTRICULARIA CORNUTA MICHX.	OFL	B1
1148	BLADDERWORT, HUMPED	UTRICULARIA GIBBA L.	OBL	
1151	BLADDERWORT, PURPLE	UTRICULARIA PURPUREA WALT.	OBL	B1
1150	BLADDERWORT, RUSH	UTRICULARIA JUNCEA VAHL	OBL	
1144	BLADDERWORT, TWO-FLOWERED	UTRICULARIA BIFLORA LAM.	OBL	B2
1153	BLADDERWORT, ZIGZAG	UTRICULARIA SUBULATA L.	OBL	
249	BLAZING-STAR	CHAMAELIRIUM LUTEUM (L.) GRAY	FACW	
541	BLOODLEAF, ROOTSTOCK	YRESINE RHIZOMATOSA STANDL.	FACW	B1
542	BLUE FLAG, SLENDER	IRIS PRISMATICA PURSH	OBL	
1045	BLUE-EYED GRASS, ATLANTIC	SISYRINCHIUM ATLANTICUM BICKN.	FAC	
1044	BLUE-EYED GRASS, COMMON	SISYRINCHIUM ANGUSTIFOLIUM MILL.	FAC	
1046	BLUE-EYED GRASS, MICHAUX'S	SISYRINCHIUM MUCRONATUM MICHX.	FAC	
1157	BLUEBERRY, CANADA	VACCINIUM MYRTILLOIDES MICHX.	FACW	
1155	BLUEBERRY, HIGHRUSH	VACCINIUM CORYMBOSUM L.	FACW	
809	BLUEGRASS, AUTUMN	POA AUTUMNALIS MUHL. EX ELLIOTT	FACU

APPENDIX D

GLOSSARY OF TERMS

Specific Epithets

Genus Names

Source: Smith (1971)

Specific Epithets

acuminatus	- tapering into a long narrow point.
alba	- white.
annu-(us,a,um)	- annual.
angustifoli-(us,a,um)	- having narrow leaves.
aguatica	- living in water, aquatic.
arborescens	- tending to be woody: treelike in form.
arbore-(us,a,um)	
arundineace-(us,a,um)	- resembling a reed
bicolor	- of two colors.
bienni-(s,e)	- biennial.
boreali-(s,e)	- northern.
bulbos-(us,a,um)	- may be applied to any swollen underground stem, not necessarily a bulb.
carolinian-(us,a,um)	- from Carolina (North or South).
carolinens-(is,e)	
carolin-(us,a,um)	
cernu-(us,a,um)	- dropping, nodding.
ciliat-(us,a,um)	- fringed with hairs on many leaves and petals.
clavat-(us,a,um)	- club-shaped.
coccine-(us,a,um)	- scarlet.
coronat-(us,a,um)	- crowned.
crinit-(us,a,um)	- furnished with long generally weak hair.
crustaties	- crested, having a crest or plume.
crus-galli	- cock's spur.
debilis	- weak, fragile.
decomposit-(ies,a,um)	- more than once divided.
digitat-(us,a,um)	- shaped like an open hand.
discolor	- of two different and usually distinct colors.
dissect-(us,a,um)	- deeply cut, divided into deep lobes or segments.
distans	- widely separate.
diversifolius	- diversely leaved.
erect-(us,a,um)	- erect, upright.
fibrillos-(us,a,um)	- fibrous, composed of fibers.
fibros-(us,a,um)	
flavescens	- becoming yellow, yellowish.
flexuos-(us,a,um)	- tortuous, zigzag.
floridan-(us,a,um)	- from Florida.
gigante-(us,a,um)	- unusually tall or large.
glomerat-(us,a,um)	- in small clusters or glomerules.
grandifoli-(us,a)	- with big leaves.
gymnocarp-(us,a,um)	- having naked fruit.
hedera	- ivy
hemal-(is,e)	- of the winter, winter flowering.

imbricaria	- overlapping in regular order like scales.
intermedi-(us,a,um)	- intermediate in color, form or habit.
japonic-(us,a,um)	- from Japan.
lanceolat-(us,a,um)	- lanceolate spear - shaped.
latifolia	- broad leaved.
leptophyllum	- thin leaved.
linear-(is,e)	- narrow, with sides nearly parallel.
macrosperma	- with large seeds.
maculat-(us,a,um)	- spotted.
marginat-(us,a,um)	- margined.
maritim-(us,a,um)	- pertaining to the sea.
micrantha	- small flower.
minor; min-(us,a,um)	- smaller.
multifidum	- many times divided.
muricat-(us,a,um)	- roughened, with hard points.
neglect-(ies,a,um)	- hitherto overlooked.
niger: nigr-(a,um)	- black; applied to roots as well as flowers.
nudicul-(us,a,um)	- naked, bare.
nud-(us,a,um)	
occidental-(is,e)	- western.
odorat-(us,a,um)	- fragrant.
oryzoides	- pertaining to rice.
paludos-(us,a,um)	- marsh loving.
palustr-(is,e)	
phellos	- cork.
pilos-(us,a,um)	- covered with soft hairs.
plantago-aguatica	- water plantain.
pratens-(is,e)	- of the meadows.
procumbens	- prostrate.
punctat-(us,a,um)	- spotted.
purpurascens	- tending to purple.
quiquefolius	- five leaved.
racemiflor-(us,a,um)	- with flowers in racemes.
racemous-(us,a,um)	
radicans	- having rooting stems.
ranunculini-(us,a,um)	- resembling buttercups.
recurvat-(us,a,um)	- curved backwards.
recurv-(a,us,um)	
reflex-(us,a,um)	- bent sharply backwards.
refract-(us,a,um)	
rigidulum	- rigid, stiff.
rotundat-(us,a,um)	- rounded.
rotund-(us,a,um)	
rub-(ens,er,ia,rum)	- red.

saccharin-(us,a,um)	- sugary.
scandens	- climbing.
secund-(us,a,um)	- one sided.
sessilifolium	- stalkless flowers.
setace-(us,a,um)	- bristled.
spinos-(us,a,um)	- spiny.
squarros-(us,a,um)	- with parts spreading or recurved at the ends.
stellat-(us,a,um)	- with spreading leaves or petals.
stolonifer-(a,um)	- having stolons or rooting runners.
strict-(us,a,um)	- erect, upright.
strobis	- cone bearing.
subulat-(us,a,um)	- awl shaped.
teniufolius	- slender leaved.
triloba	- three lobed.
tripetala	- three petals.
tuberos-(us,a,um)	- tuberous.
unifolius	- with one leaf.
variegat-(us,a,um)	- irregularly colored: variegated.
vern-(us,a,um)	- of the spring.
verrucos-(us,a,um)	- colored.
versicolor	- variously colored.
verticillar-(es,is,e)	- having whorls.
verticillat-(us,a,um)	
vesicari-(us,a,um)	- bladder-like.
virginiana	- from Virginia.
vulgaris	- common, ordinary, usual.

Genus Names

Acer	- sharp, pungent, maple.
Agrimonia	- agrimony, yields a yellow dye.
Agrostis	- a kind of grass.
Alnus	- alder.
Alopecurus	- grass like a fox's tail, foxtail.
Amaranthus	- unfading.
Ambrosia	- weedy herbs.
Amelanchier	- serviceberry.
Andropogon	- beard grass.
Asclepias	- milkweed.
Aster	- starwort, a star.
Athyrium	- lady fern, swamp spleen wort.
Betula	- birch.
Bidens	- tickseed, beggar's tick.
Botrychium	- moonwort.
Briza	- quaking grass.
Bromus	- brome grass.
Campanula	- bellflower.
Cardamine	- bittercress, cuckoo flower.
Carex	- sedge.
Carya	- hickory.
Cassia	- senna.
Chenopodium	- goosefoot.
Cicuta	- water hemlock.
Commelina	- dayflower.
Cornus	- dogwood.
Cuscuta	- dodder.
Cyperus	- sedge.
Dryopteris	- wood fern.
Echinochloa	- hedgehog grass.
Elymus	- wild rye.
Epilobium	- willow, herb.
Equisetum	- horsetail.
Eragrostis	- love grass.
Erianthus	- plume grass.
Erigeron	- fleabane.
Eupatorium	- joe-pye-weed.
Fraxinus	- ash.
Galium	- bedstraw.
Gaylussacia	- huckleberry.
Geum	- arens, herb,
Glyceria	- manna grass.
Gratiola	- grace or pleasantness.
Habenaria	- fringed orchid.
Helianthus	- sunflower.
Hydrocotyle	- water pennywort.
Hypericum	- St. Johnswort.

Ilex	- holly.
Ipomoea	- morning glory.
Iris	- rhizomatous and bulbous perennials.
Juncus	- rush.
Lemna	- duckweed.
Lepidium	- garden cress, peppergrass.
Lespedeza	- bush clover.
Lilium	- lily.
Listera	- terrestrial orchids.
Lobelia	- genus of herbs and sub-shrubs.
Lonicera	- honeysuckle.
Lycopus	- water horehound.
Lysimachia	- loosestrife.
Lythrum	- blood colored loosestrife.
Mentha	- mint.
Myosotis	- forget-me-not.
Myriophyllum	- water milfoil.
Najas	- water nymph.
Nuphar	- spatter dock.
Nymphoides	- resembling water lilies.
Oenothera	- plant which smells of wine.
Panicum	- millet.
Paspalum	- millet.
Phalaris	- canary grass.
Phlox	- a flame.
Pinus	- pine.
Plantago	- plantain.
Poa	- grass.
Polygala	- milkwort.
Polygonum	- smart or knotweed.
Populus	- poplar.
Potamogeton	- pondweed.
Potentilla	- power, potential
Prunus	- plum, cherry.
Pycnanthemum	- mountain mint.
Quercus	- oak.
Ranunculus	- buttercup, crowfoot.
Rorippa	- water-cress.
Rubus	- blackberry, bramble, raspberry.
Rudbeckia	- cone flower, black-eyed susan.
Rumex	- sorrel, dock.

Sabatia	- rose pink, american centuary.
Sagittaria	- arrowhead.
Salix	- willow.
Scirpus	- bulrush.
Setaria	- foxtail millet.
Smilax	- greenbier.
Solidago	- goldenrod.
Sparganium	- bur-reed.
Spartina	- cordgrass.
Spiranthes	- ladies tresses.
Stachys	- woundwort.
Thalictrum	- meadow rue.
Trillium	- birthroot.
Typha	- cattail.
Ulmus	- elm.
Utricularia	- bladderwort.
Uvularia	- bellwort.
Vaccinium	- blueberry.
Veronica	- ironweed.
Viburnum	- arrow wood.
Viola	- violet, pansy.
Vitis	- grape.
Woodwardia	- chainfern.
