MARINE DEBRIS: MORE THAN A LITTER PROBLEM

 Modern Society has developed a number of uses for plastic due to its lightweight, strength, durability, versatility, and low cost. Products range from bags, bottles, cups, six-pack yokes, and balloons to strapping bands, plastic sheeting, resin pellets, packing materials and fishing gear. Growing evidence indicates that when dumped, lost or abandoned in the marine or aquatic environments, plastic debris not only looks bad, but can harm the environment.

 Environmental impacts arise from entanglement of marine animals in plastic debris and from ingestion of plastic by aquatic organisms. Marine debris poses a threat to humans when divers, ships, or boats become fouled in debris. The world's beaches and waterfronts are becoming littered with plastic garbage requiring costly cleanup procedures.

 As of January 1989, the Marine Plastic Pollution Research and Control Act makes it against the law to dump plastics at sea and in all U.S. navigable waters.

 This educational publication is one of several public awareness efforts being conducted by the National Oceanic and Atmospheric Administration's (NOAA) Marine Entanglement Research Program on the issue of marine debris.

 A commitment to stop the dumping of plastics and other harmful refuse into the aquatic environment is needed from fishermen, boaters, sailors, merchant seafarers, and beachgoers alike. "If we are not part of the solution, then we are part of the problem!"

The editors have drawn upon a variety of materials from other federal and state agencies, commercial and recreational organizations, and private individuals to alert youth and their families to the hazards persistent marine debris pose to our natural resources and marine life.

 We would like to acknowledge the combined cooperative efforts of a number of these individuals and organizations which have contributed to this Marine Debris Education Program Supplement. Failure to recognize any specific contributor to this effort is merely an oversight.

Plastic, styrofoam, monofilament line, nets, and other non-biodegradable refuse can entangle wildlife and harms their environment. Turtles and birds can ingest the plastic bags, gear, and trash. Fishermen and boaters please dispose of your refuse properly. **YOU CAN.**

Anthony
Taber

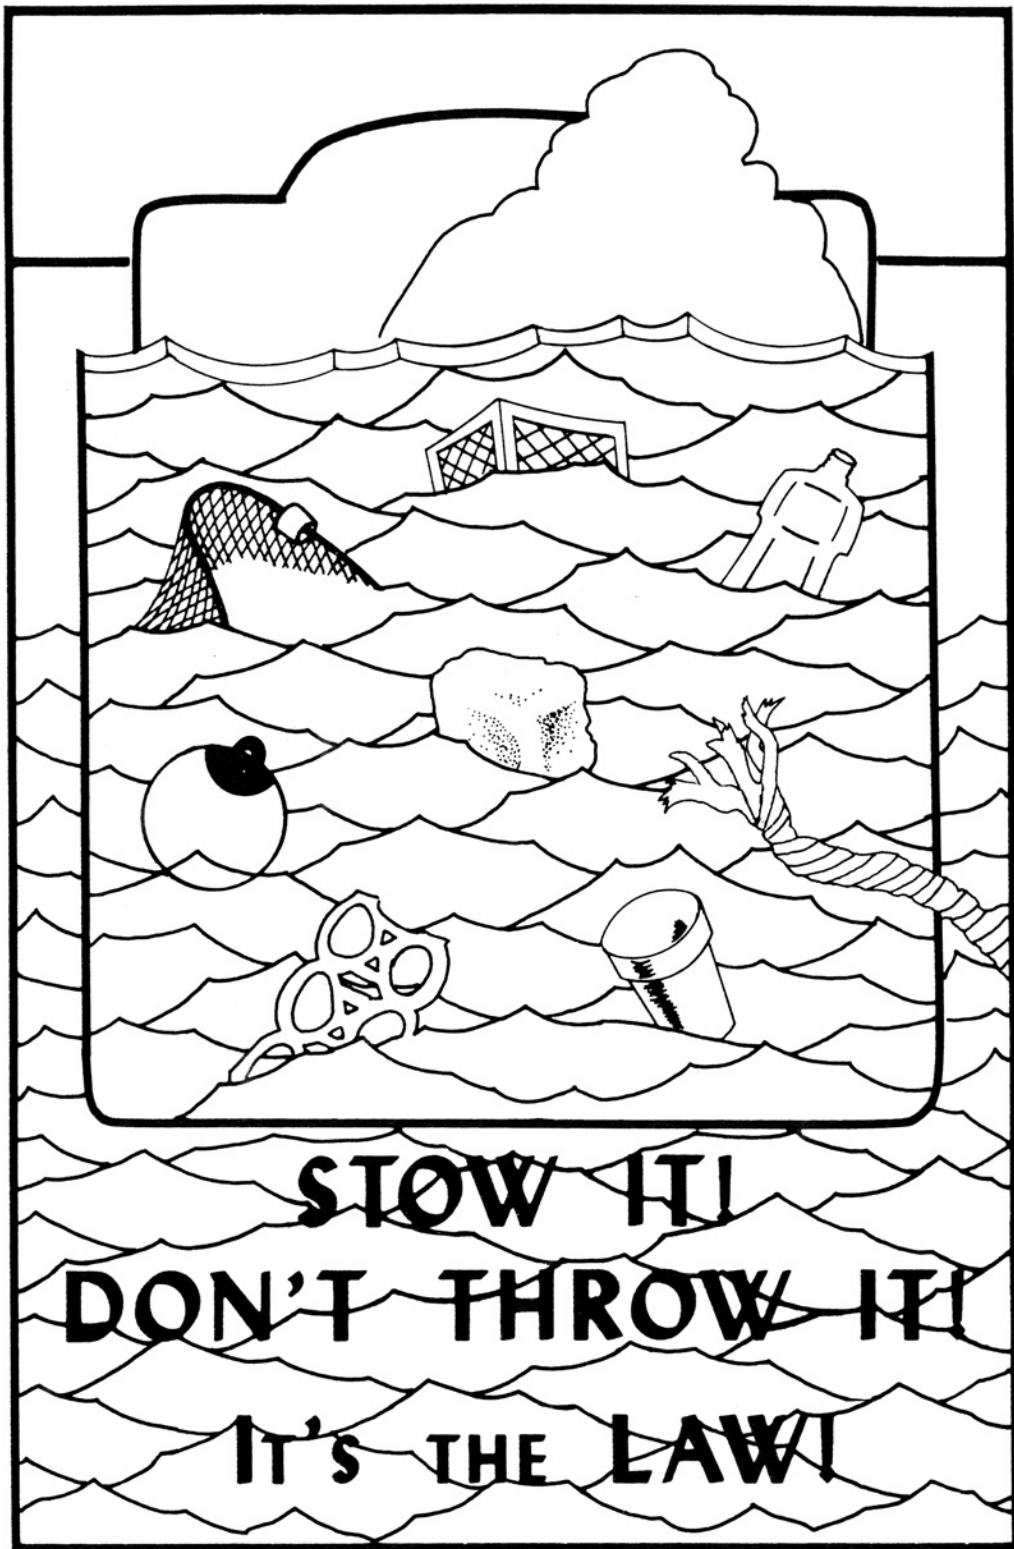

YOU CAN HELP!

- Make it boat policy that no trash is discarded, washed or blown overboard.
- Minimize the amount of non-degradable products on board. Provision your vessel using bulk/refillable containers.
- Stow trash for disposal in port. Encourage your port or marina to provide convenient refuse disposal facilities.
- Where possible retrieve trash encountered in the water.
- Share your concern with friends, fellow mariners and family.
- Participate in beach clean-ups, and leave the beach clean after visits.

SING ALONG

LITTER'S NOT PRETTY!
(THE ABC SONG)

Keep the beaches clean and white.
Litter's not a pretty sight.
Don't leave litter on the sand.
Put it in a garbage can!
Keep the beaches clean and white.
Litter's not a pretty sight.

CLEAN THE BEACH!
(LONDON BRIDGE)

If you're playing in the sand,
And there's trash close at hand.
Put it in a garbage can --
Clean the beach up!

Lucky will be proud of you
When you're through -- I will too!
Let's do what he says to do:
Clean the beach up!

PICK IT UP!
(ROW, ROW, ROW YOUR BOAT)

We don't like to see
Litter on the sand.
Pick it up, pick it up, pick it up, pick it up,
Throw it in the can!

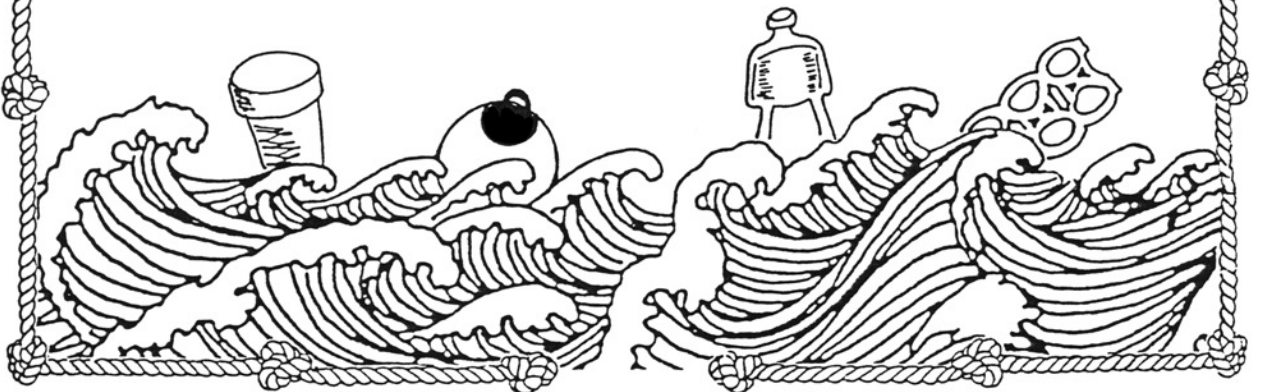

LUCKY SAY'S
(SHORT'NIN' BREAD)

Lucky says, "Keep the beaches pretty."
Lucky says, "Don't you leave a mess!"
Lucky says, "Keep the beaches pretty."
Can we do it? Yes, yes, yes!

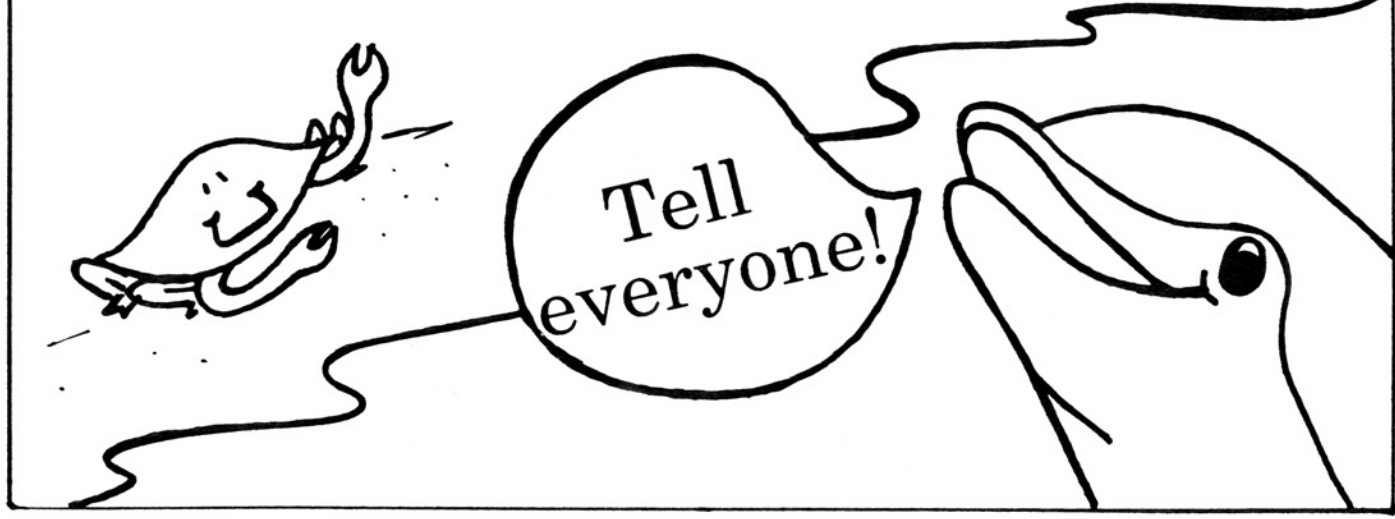

REMEMBER:

**IF YOU ARE NOT
PART OF THE SOLUTION,
THEN
YOU ARE PART OF
THE PROBLEM.**

Don't mess with Texas beaches.
