MANUAL SERIES

INSTRUCTIONS FOR CODING AND KEYPUNCHING THE GEOLOGICAL SAMPLE INFORMATION FORM FOR CORE, GRAB, AND DREDGE SAMPLES

PUBLICATION M-5

1966

The National Oceanographic Data Center is sponsored by U. S. Government agencies having an interest in the marine environment; it is governed by an Advisory Board composed of representatives of these activities and the National Academy of Sciences. The U. S. Naval Oceanographic Office is assigned responsibility for management of the National Oceanographic Data Center.

The Sponsoring Agencies are:

Atomic Energy Commission
Bureau of Commercial Fisheries
Coast Guard
Coastal Engineering Research Center
Department of the Navy
Environmental Science Services Administration
Federal Water Pollution Control Administration
Geological Survey
Health, Education & Welfare
National Science Foundation

FOREWORD

In keeping with its charter, the National Oceanographic Data Center (NODC) has undertaken development of a storage and retrieval system for marine geological information. The system is being developed in two steps. The first provides the basic identification of cruise, station, instrument used, and the types of samples taken. The second will provide the actual data obtained through laboratory and other analyses.

This manual provides instructions, codes, and conversion tables for completing the first step; i.e., for filling in the Geological Sample Information Form. It can be used also as an aid for interpreting the punch cards and Electronic Accounting Machine listings. Other manuals will be issued to include the instructions, codes, and conversion tables for step two when these data forms have been agreed upon by the responsible ad hoc committees and approved by the NODC Interagency Advisory Board.

TABLE OF CONTENTS

LIST OF TABLES

INTRODUCTION

The Interagency Advisory Board of the National Oceanographic Data Center (NODC) appointed Dr. Harris B. Stewart, Jr., of the Environmental Science Services Administration (Institute for Oceanography) as Chairman of an ad hoc committee to furnish guidance to the NODC for the development of a storage-retrieval system for geological information. The system outlined in this publication is based on the guidance of this committee and the opinions solicited from the scientific community. The manual's purpose is to indicate the procedure used by the NODC in coding data from core, grab, and dredge operations. Agencies and institutions are encouraged to use NODC systems when furnishing information to NODC.

Because of the lack of standardization in laboratory and reporting techniques, it was suggested that the development of the geological system be accomplished in two phases. The system developed in the first phase will allow for the storage and retrieval of information concerning the where, who, what, and when of a marine geological survey. Although this initial step will provide only limited geological data per se, it will make easily accessible very useful information on what has been accomplished.

The system developed during the second phase will allow for archiving actual data, including laboratory analyses. Schemes for handling the chemical analyses, physical properties, and mineralogy of bottom sediments and a scheme for handling the engineering properties of bottom sediments are being prepared, and a study is being made on a bottom mineral resources format. The progress of the development of these systems is given in the NODC technical report series.

GENERAL INSTRUCTIONS

These general instructions have been prepared as an aid in making entries and to obtain uniformity in the coding of data on the Geological Sample Information Form. This form permits the coding of data for a Master Identification Card (Card Type 1), a Sampling Information Card (Card Type 2), and a Sample Description Card (Card Type 3).

Card Type 1 used alone can serve as the Geological Sample Index, but the system used in this way provides only minimal information on the sampling method and sample obtained.

The heading items on the upper part of the form are needed for index cards. An item need not be repeated on subsequent sheets, but new information should be provided as required.

1. Columns 1 through 9 are coded at the NODC, except by special arrangement.

2. On punch cards, Columns 1 through 15 of Card Types 2 and 3 will be machine reproduced from Card Type 1 during processing. If punched outside the NODC, the reference number in Columns 1 through 5 should be obtained from the Data Center prior to processing or left blank and hand annotated.

3. Leave columns blank if data are not available or observations are not made.

4. Prefix zeros to fill a field; do not suffix zeros to fill a field of information, unless required for decimal positioning.

5. Use the standard rounding procedures when rounding is necessary.

Example: > 5, add one (1) to preceding column
< 5, drop
5, round to nearest even number

6. Convert local time to Greenwich Mean Time (GMT). This may require an adjustment to the day, month, and year.

7. For new dredge data (underway sampling), the position given should be the midpoint of the dredge run or the position where the sample was known to have been taken. For historic dredge data, this usually is the initial position. If otherwise, please annotate in Remarks space.

DETAILED INSTRUCTIONS

These instructions, codes, and conversion tables have been assembled to assist in the coding of the specific information on the Geological Sample Information Form (Figure 1). This form contains three categories referred to as Card Types 1, 2, and 3.

CODING THE MASTER IDENTIFICATION CARD (CARD TYPE 1)

The completed Master Identification Card contains the identification information for the cruise and its related stations, as well as basic data on the nature of the sample obtained. The first 15 columns contain the processing information required by the NODC and need not be coded by the originator. These columns have not been included on the coding form for Card Types 2 and 3; the information must be duplicated into these cards from the Master Identification Card at the machine reproduction stage.

Columns 16 through 75 of Card Type 1 provide the time of sampling; the originator's identification information, his country and institution; the sampling position and depth; bottom sediment type; whether photographs were taken; sampling device; and the source (laboratory or field description) of the data. Columns 76 through 80 are used for subject-sequencing information to be completed prior to keypunching.

Columns 1-5 — NODC REFERENCE NUMBER

These columns provide a cumulative identification reference number which is assigned by the NODC prior to processing. This number should be obtained from the NODC for cards punched outside the NODC or left blank and hand annotated.

Columns 6-9 — NODC CONSECUTIVE NUMBER

Consecutive numbers are assigned and coded by the NODC, unless the card is keypunched outside the NODC. Stations or samples included within a single NODC reference number are consecutively numbered, starting with 0001 regardless of originator's numbering and then consecutively in the order in which they appear in the source. One consecutive number includes

two samples only if both are taken during one lowering. Additional samples from the same position but from another lowering are assigned a new NODC consecutive number.

Columns 10-12 MARSDEN SQUARE

The number identifying the Marsden Square containing the station located by geographic coordinates in Columns 41 through 53 is entered in these columns. A Marsden Square Chart (Figure 2) is provided to show how this number is related to the geographic coordinates. The programming note for computing this number is given in Appendix A.

Columns 13-14 ONE-DEGREE SQUARE

The number identifying the degree square of the Marsden Square within which the station is located is entered in these columns. A chart (Figure 3) showing the position of one-degree divisions within a Marsden Square is provided. Note that the degree square is obtained by combining the unit numbers of the degrees of latitude and longitude.

Example: 25°20'N and 137°49'W is coded 57.

Column 15 DEPTH RANGE

Enter the depth range within which the sample was taken in meters according to the following code.

Depth Range (Meters)	Code
0-49	0
50-99	1
100-199	2
200-499	3
500-999	4
1000-1999	5
2000-2999	6
3000-3999	7
4000-5999	8
> 6000	9

Columns 16-17 YEAR

Enter the last two digits of the year as determined by GMT. For nineteenth century data, place a red dash above the entry in Column 16 and overpunch X in Column 16 on the card.

Columns 18-19 MONTH

Enter the month as determined by GMT, using Arabic numerals 01 through 12.

Columns 20-21 DAY

Enter the day of the month as determined by GMT, using Arabic numerals 01 through 31.

Columns 22-23 HOUR

Enter the station time to the nearest hour as determined by GMT, using Arabic numerals 01 through 24. Conversion from local time to GMT is given in Table 1.

Columns 24-25 SHIP

The code designation for the ship collecting the sample will be entered at the NODC.

Columns 26-29 ORIGINATOR'S CRUISE NUMBER

The originator's cruise number will be entered at the NODC.

Columns 30-35 ORIGINATOR'S STATION OR SAMPLE NUMBER

Enter the originator's station or sample number placing the first character in Column 30.

Columns 36-37 COUNTRY

The code designation for the country of the agency sponsoring or operating the vessel regardless of the ship registry will be entered at the NODC.

Columns 38-39 INSTITUTION

The code designation for the sponsoring institution will be entered at the NODC.

Column 40 POSITIONAL ACCURACY

Enter the estimated accuracy of the position reported or of the navigational system used according to the following code. Enter system used in upper right-hand heading of coding form.

Category	Code
Less than 0.2 nautical miles	1
Between 0.2 and less than 1 nautical mile . .	2
Between 1 and less than 3 nautical miles . . .	3
Between 3 and less than 10 nautical miles . .	4
Between 10 and less than 20 nautical miles . .	5
Greater than or equal to 20 nautical miles . .	6

Columns 41-46 LATITUDE

Enter the latitude in degrees, minutes, and hundredths of a minute where the sampler touched bottom. Table 2 converts seconds to hundredths of a minute. If reported to tenths of a minute, enter in Column 45 and leave Column 46 blank. Enter N or S in the column headed B following Column 46; if S is entered on the coding form, overpunch X in Column 44 on the card. For dredge operations, see note 7, General Instructions.

Columns 47-53 LONGITUDE

Enter the longitude in degrees, minutes, and hundredths of a minute where the sampler touched bottom. Table 2 converts seconds to hundredths of a minute. If reported to tenths of a minute, enter in Column 52 and leave Column 53 blank. Enter E or W in the column headed B following Column 53; if E is entered on the coding form, overpunch X in Column 51 on the card. For dredge operations, see note 7, General Instructions.

Column 54 SOUNDING DEVICE

Enter the type of device used to determine the depth to the bottom according to the following code.

Type	Code
Echo sounder	1
Wire sounder	2
Both echo and wire sounder	3
Chart	4
Other (Identify in Remarks space) .	9

Columns 55-58 DEPTH

Enter the sounding depth in meters of the geographic position reported in Columns 41 through 53. Enter in Remarks space uncertain soundings and those given as a range. Prefix zeros to fill the field. Table 3 converts fathoms to meters; Table 4 converts feet to meters. If depth is greater than 9,999 meters, enter the letter code given below in Column 55 (on both the coding form and punch card) and enter the hundreds, tens, and units digits in Columns 56 through 58.

Example: Code 10,999 meters as A999.

Depth Range	Code
10,000 through 10,999 meters	A
11,000 through 11,999 meters	B

Column 59 CORRECTION

Enter the numeral 1 if the depth value coded in Columns 55 through 58 has been corrected. Enter the numeral 2 if depth is uncorrected. Enter the numeral 3 if the depth is questionable. Leave blank if unknown. Annotate correction system in Remarks space.

Columns 60-61 SAMPLE OBTAINED

Enter the general nature of the sample obtained according to the following code in Column 61. Enter second dominant fraction in Column 60. Card Type 3 is used for a more detailed sample description.

	Code
Coarser than sand	0
Sand	1
Silt	2
Clay	3
Ooze	4
Mud	5
Rocks, rock fragments	6
Organic material (shell, peat, wood, coral, etc.)	7
Nodules, slabs, or concretions (manganese, phosphate, iron, glauconite)	8
Hard bottom (No recovery or only trace amount recovered--not resulting from equipment failure)	9

Enter code for nature of trace material in Column 61.

Column 62 TYPE OF ANALYSIS

Category	Code
Laboratory	1
Megascopic (Shipboard, log sheets, etc.)	2
Other (Identify in Remarks space)	3

Column 63 SAMPLING METHOD

Enter method of sampling according to the following code.

Sampling Method	Code
Core	1
Grab	2
Dredge (underway sampling)	3
Sounding sample (lead line, anchor, etc.)	4
Unknown--sediment description available (charts, etc.)	5
Other (Report in Remarks space)	9

Columns 64-65 PHOTOGRAPHY

Enter the numeral 1 in Column 64 if a bottom photograph is taken during sampling. Enter the numeral 1 in Column 65 if a photograph of a sample is taken. Leave blank if not taken or unknown. Enter photo identification number in Remarks space if known.

Columns 66-75

Columns 66 through 75 are not coded at this time.

Column 76 CARD TYPE

The preprinted numeral 1 on the coding form indicates Card Type 1, the Master Identification Card; this numeral must be entered in Column 76 of the punch card.

Columns 77-78 CARD NUMBER

These numbers indicate sorting and print-out sequence within a station (NODC consecutive number).

Columns 79-80 DECK NUMBER

The preprinted numerals 41 are assigned by NODC to identify this deck as the NODC Geological Sample Information Deck; these numerals must be entered in Columns 79 and 80 of the punch card.

CODING THE SAMPLING INFORMATION CARD (CARD TYPE 2)

The second portion of the Geological Sample Information Form is devoted to the coding of sampling information. The second row is used for coding additional data obtained during the same lowering, such as would be obtained by a triggering mechanism.

Columns 1-15

These columns do not appear on the coding form. The information should be reproduced from Card Type 1 during the keypunching operation.

Columns 16-17 DEVICE USED

Enter the type of device used to obtain the sample from the following code. Column 16 identifies a core, grab, or dredge sampler, and Column 17 indicates the particular type of sampler. The subsampler data are provided in the second row.

Column 16

Primary Sampler	Subsampler
Core 1	Secondary Core Sampler 4
Grab 2	Secondary Grab Sampler 5
Dredge 3	Secondary Dredge Sampler 6

Column 17

Corer	Grab	Dredge (Underway)	Code
Undifferentiated (Unknown)	Undifferentiated (Unknown)	Undifferentiated (Unknown)	0
Gravity	Orange peel	Pipe	1
Piston	Hand or scuba diver (suited or nonsuited)	Chain bag	2
Suction	Eckman, Pettersson, etc.	Metal box	3
Vibrating	Lead line or anchor	Trawl	4
Impact	Submersible vehicle	Bucket	5
Hand (Hand driven or scuba)	Suspended sediment collector	Scoop	6
Expendable		Barge (Shovel)	7
Rotary		Suction	8
Other (Identify in Remarks space)	Other (Identify in Remarks space)	Other (Identify in Remarks space)	9

Column 18 SAMPLER CONDITION

Enter the condition of the sampler when brought back on board according to the code given below.

	Code
Unreported or unknown	Leave blank
Generally good	1
Barrel bent or broken	2
Piston malfunctioned	3
Core catcher damaged	4
Cutting edge damaged	5
Sampler lost or excessively damaged	6
Other (Identify in Remarks space)	9

Columns 19-22 TOTAL WEIGHT

For core operations only. Enter the total weight of the coring device (including all added weights) in kilograms to nearest kilogram. Prefix zeros to complete the field. Table 5 converts pounds to kilograms.

Columns 23-24 FREE-FALL DISTANCE

Enter the free-fall distance of the corer in meters to nearest meter. Prefix zeros to fill the field. Tables 3 and 4 convert fathoms and feet, respectively to meters.

Columns 25-27 PENETRATION

Enter the ocean bottom penetration of the corer in meters to the nearest tenth. Tables 4 and 6 convert feet and inches, respectively, to meters. Table 6 must be rounded to the nearest tenth of a meter. Report in Remarks space how penetration was determined.

Columns 28-30 DIAMETER

Enter the diameter of the core or the inside diameter of the corer to the nearest tenth of a centimeter. Prefix zeros to fill the field. Table 7 converts inches to centimeters.

Columns 31-34 LENGTH

Enter the total length of the core obtained, including the disturbed portion, in centimeters to the nearest centimeter. Enter undisturbed length if total length is unknown. Prefix zeros to fill the field. Tables 7 and 8 convert inches and feet, respectively, to centimeters. For trace amount enter the letter T in Column 34.

Column 35 CORE CONDITION

Enter the condition of the core as initially obtained according to the code given below. Conditions other than those outlined should be listed in the Remarks space.

Core Condition	Code
Unknown	Leave blank
Entire core generally undisturbed	1
Upper portion missing, remainder generally undisturbed	2
Upper portion disturbed, remainder generally undisturbed	3
Lower portion sucked or disturbed, remainder generally undisturbed	4
Badly disturbed	5
Unusable, excessive loss	6
No core	7
Other (Identify in Remarks space)	9

Columns 36-39 DISTURBED PORTION

Enter length of disturbed portion of core when known, in centimeters. Top or bottom position of this disturbed portion can be determined from preceding column (Column 35).

Column 40 CORE SECTIONING

Core Sectioning	Code
Core unsectioned	0
Core in about 1-meter sections	1
Core in about 2-meter sections	2
Core in about 3-meter sections	3
Core in about 4-meter sections	4
Core in unequal sections	5
Other (Identify in Remarks space)	9

Column 41 — CORE EXTRACTION

Enter the numeral 1 if the core is removed from its casing, barrel, or liner. Enter the numeral 2 if the core is not removed from its casing, barrel, or liner. Leave blank if unknown.

Columns 42-44 — VOLUME

Enter the volume of grab or dredge samples in cubic decimeters. Prefix zeros to complete the field. For volumes less than 1 dm^3, enter the letter T in Column 44 to indicate trace. Note: 1 $dm.^3$ equals 1 liter.

Columns 45-47 — PRESERVATION

Enter the sample preservation technique, coding water condition in Column 45, bacteria in Column 46, and structure in Column 47. Enter the required information according to the codes given below:

Water (Column 45)	Code
No preservation technique applied or unknown	0
Sealed to preserve entire water content	1
Sealed to preserve partial water content	2

Bacteria (Column 46)	Code
No preservative added or unknown	0
Bacteriostatic agent added	1
Bactericide added	2
Frozen	3
Chilled but not frozen	4
Other (Identify in Remarks space)	9

Structure (Column 47)	Code
No preservation technique applied or unknown . . .	0
Sediment-water interface preserved	1
Peel technique applied	2
Imbedded in plastic	3
Other (Identify in Remarks space)	9

Columns 48-75 SAMPLING REMARKS

Enter additional sampling information in the Remarks space above Columns 48-75. The information will be entered into these columns by the NODC.

Column 76 CARD TYPE

The preprinted numeral 2 on the coding form indicates Card Type 2, the Sampling Information Card; this numeral must be entered in Column 76 of the punch card.

Columns 77-78 CARD NUMBER

These numbers indicate sorting and print-out sequence within a station (NODC consecutive number).

Columns 79-80 DECK NUMBER

The preprinted numerals 41 are assigned by NODC to identify this deck as the Geological Sample Information Deck; these numerals must be entered in Columns 79-80 of the punch card.

CODING THE SAMPLE DESCRIPTION CARD (CARD TYPE 3)

The third portion of the Geological Sample Information Form is devoted to the coding of a basic sample description. For core samples, the length of the uppermost segment described is given in Columns 16 through 23. Detailed chemical, physical, and mineralogical analyses, when available, will be coded on other NODC forms.

Row 2 is used for coding sample data obtained by sampling equipment coded on row 2, Card Type 2.

Columns 1-15

These columns do not appear on the coding form. The information should be reproduced from Card Type 1 during the keypunching operation.

Columns 16-23 CORE INTERVAL

Enter the top and bottom in centimeters of the uppermost core segment described.

Columns 24-32 COLOR

Enter the Munsell color code number for the color of the wet sample beginning in Column 24. Do not suffix zeros to fill the field.

Column 33

Report the presence of odors in this column according to the codes given below.

	Code
Unknown or none	Leave blank
H_2S odor present	1
Fetid non-H_2S odor present (musty, earthy, bituminous)	2
Sharp, pungent odor present (formalin)	3

Columns 34-75 SEDIMENT DESCRIPTION

Write the description of the sediments in the space provided above Columns 34-75. This information will be inserted in Columns 34-75 by NODC prior to keypunching. Abbreviations will be used if necessary.

Column 76 CARD TYPE

The preprinted numeral 3 on the coding form indicates Card Type 3, the Sample Description Card; this numeral must be entered in Column 76 of the punch card.

Columns 77-78 CARD NUMBER

These numbers indicate sorting and print-out sequence within a station (NODC consecutive number).

Columns 79-80 DECK NUMBER

The preprinted numerals 41 are assigned by NODC to identify this deck as the Geological Sample Information Deck; these numerals must be entered in Columns 79 and 80 of the punch card.

FOLLOWING DAY

EXPLANATION:

If day change (diagonal) line is crossed from right to left, subtract one day; from left to right, add one day.

To convert from local time to any other time, locate local time in zone column and proceed horizontally to zone wanted. Example 05 in L (-11) time is 18 GMT of preceding day.

TABLE 2

Conversion from Seconds to Hundredths of a Minute

APPENDIX A

EXPLANATION OF THE NODC LISTING FORMAT

Two types of listings are available: the Archive Listing and the Publication Listing.

The Archive Listing printed on plain tabulating paper is used for routine release of data. Stations are double spaced and are listed in continuous order. Columnar headings are not printed· identification of fields is accomplished by use of a template provided with each listing.

The Publication Listing is identical in format to the Archive Listing but is printed on heavy white paper suitable for photo-offset lithographic reproduction, and includes the columnar heading.

An example of the NODC Publication Listing is shown in Appendix C.

The following is a complete description of the entries, units, and codes appearing on the listing.

CARD TYPE I TEMPLATE

ENTRY		DESCRIPTION OF FIELD
NODC		
	REF. NO.	This number is assigned by NODC for data storage and retrieval purposes. Reference sources for each cruise are available.
	CONSEC. NO.	This number is assigned by NODC consecutively for each station. The NODC Reference and Consecutive Numbers define each station in the NODC archives.
MARS. SQ. 10° SQ. 1° SQ.		Marsden Square number(s) according to the Marsden Square system (FIGURES 2 & 3)
DEPTH RANGE		This number indicates sounding depth as a range and is used for data storage and retrieval purposes.
STATION TIME (GMT)		Date and time given by originator in GMT.
YR.		Year
MO.		Month
DAY		Day of month
HR.		Station hour to nearest hour

ENTRY	DESCRIPTION OF FIELD
ORIGINATOR's IDENTIFICATION	
SHIP CODE	NODC Ship code. This code indicates name of ship.
CRUISE NO.	Cruise Number as assigned by Originator.
STAT./SAMPLE NO.	Station or Sample number as assigned by Originator.
COUNT.	NODC country code. This code (both numeric and alphanumeric) indicates the nationality of the originator.
INST.	Institution code. This code (both numeric and alphanumeric) reflects the agency or institution conducting the survey.
LATITUDE	
ACC.	Code for navigational accuracy.
DEG.	In degrees, minutes, and hundredths of minutes, N. or S.
MIN. 1/100	
LONGITUDE	
DEG.	In degrees, minutes, and hundredths of minutes, E. or W.
MIN. 1/100	
SND. DEV.	Code indicating device used for recording sounding depth.
DEPTH m.	Sounding depth in meters.
CORR.	Code indicates if sounding depth is corrected or uncorrected.
SAMPLE OBT.	Code for general nature of sample obtained.
ANAL.	Code indicating the nature of the sample analysis.
SAMP. MET.	Code for general type of sampling apparatus used.

ENTRY	DESCRIPTION OF FIELD
PHOTO	
BOT.	Code indicates if bottom photograph was taken during sampling.
SAMP.	Code indicates if a photograph of the sample was taken.
CARD TYPE	Card type I identifies the Master Identification Card.
CARD NO.	Number indicates print-out sequence within a station (NODC consecutive number).
DECK NO.	Deck 41 identifies the NODC Geological Sample Information Deck.

CARD TYPE II TEMPLATE

ENTRY	DESCRIPTION OF FIELD
DEV.	Code indicates type of primary sampler used to obtain sample and subsampler used if an additional sample was obtained.
COND.	Code describes condition of samples when brought back on board.
TOT. WT. Kg.	Total weight (including all added weights) of the coring device.
FREE FL. m.	Free Fall distance to the nearest meter.
PENET. m. 1/10	Ocean bottom penetration of the corer in meters to nearest tenth.
DIAM. cm. 1/10	Core diameter or inside diameter of corer to nearest tenth of a centimeter.
LENGTH cm.	Total length of core, including disturbed portion, to nearest centimeter.

ENTRY	DESCRIPTION OF FIELD
COND.	Code describes condition of core as initially obtained.
DIST. PORT. cm.	Length of disturbed portion of core in centimeters.
SEC.	Code describes core sectioning procedure.
EXT.	Indicates if the core is removed from the casing, barrel, or liner of coring device.
VOLUME $dm.^3$	Volume of grab or dredge sample in cubic decimeters.
PRESERVATION H_2O	Code indicates water preservation technique.
BAC.	Code indicates bacteria preservation technique.
STRUC.	Code indicates structure preservation technique.
SAMPLING REMARKS	Originator's additional comments concerning the sampling at this station.
CARD TYPE	Card type II identifies the Sampling Information Card.
CARD NO.	Number indicates print-out sequence within a station (NODC consecutive numbers).
DECK NO.	Deck 41 identifies NODC Geological Sample Information Deck.

CARD TYPE III TEMPLATE

ENTRY	DESCRIPTION OF FIELD
CORE INTERVAL	
TOP	Beginning of uppermost core segment in centimeters.
BOTTOM	Bottom of uppermost core segment in centimeters.

ENTRY	DESCRIPTION OF FIELD
MUNSELL COLOR	Munsell color code number for the color of the wet sample segment.
ODOR	Code indicates presence of odors.
SEDIMENT DESCRIPTION	Description of sediment (numeric and alphanumeric). This entry may be abbreviated.
CARD TYPE	Card type III identifies the Sample Description Card.
CARD NO.	Number indicates print-out sequence within a station (NODC consecutive number).
DECK NO.	Deck 41 identifies the NODC Geological Sample Information Deck.
