INTRODUCTION

The commercial landings of threatened and endangered species of marine turtles throughout U.S. waters have never been reported in detail. The early commercial sea turtle landings were sporadically collected and were published in a series of U.S. Government fisheries documents. Unfortunately, they have never been collated and summarized into a single data base or document. These are important base-line fisheries data on U.S. threatened and endangered species of sea turtles and provide considerable insight into the sociology and economics of the turtle fishery. Additionally, these data also provide basic biological information, such as species composition, seasonality, and sizes. These factors are necessary for understanding the ecology of these unique reptiles and enable resource managers to formulate sound management and conservation strategies, as mandated by the Endangered Species Act of 1973, and subsequent amendments. In this report, I summarize the commercial U.S. sea turtle landings as reported by the U.S. Fisheries Commission, Bureau of Commercial Fisheries and National Marine Fisheries Service for the continental U.S., Puerto Rico, and Hawaii.

COMMERCIAL LANDINGS DATA

The sea turtle data were initially collected by interviews with fisherman, and were later collected and reported by dockside seafood dealers. Unfortunately, there may have been some reluctance to report accurate landings in the late 1800's to government officials, and it is probable that many additional turtles were landed and directly consumed by vessel crews and not officially recorded.

The landings and values data in this paper are from U.S. Government fisheries publications. The "Fishery Industries of the U.S.", were published initially in the Report of the U.S. Commissioner of Fisheries from 1873 to 1939. The early reports describe the coastal marine resources and fisheries reported by the fledgling Fisheries Commission, which evolved into the Bureau of Commercial Fisheries (BCF) and finally the National Marine Fisheries Service (NMFS). The later reports dealt mostly with fisheries statistics. These statistical reports, "Fishery Statistics of the U.S.", were published by the Division of Statistics and Methods of the Fisheries for the years 1940 to 1977, and were a summation of all the individual states' detailed landings compiled into a single volume. The individual state landings were produced in the early 1950's by the BCF/NMFS and the various state marine fisheries departments. These

reports often contained landings data or statistical details not summarized or published in the "Fishery Statistics of the U.S".

The turtle landings data were coded (Appendix 1) and entered in a personal computer using a dbase format (Appendix 2). The Florida Landings (Appendix 3), the Louisiana Landings (Appendix 4), and the Fishery Statistics of the U.S. landings. The data in this report are mostly from the "Fishery Statistics of the U.S.". However, the Florida and Louisiana Landings were utilized to obtain monthly and county information not published in the "Fishery Statistics of the U.S.". The data were presented by species whenever possible, and summarized by all species combined.

These data were not edited for accuracy or to correct obvious errors in species identifications, but are presented here exactly as published. All weights were for whole animals and converted from pounds to kilograms except for those original data sets in Appendices 3-5.

TURTLE FISHERY

There are five species of sea turtle commonly occurring in U.S. coastal waters. These species are: green (*Chelonia mydas*), loggerhead (*Caretta caretta*), Kemp's ridley (*Lepidochelys kemp*), hawksbill (*Eretmochelys imbricata*), and leatherback (*Dermochelys coriacea*). The commercial U.S. sea turtle fishery varied considerably, consisting of directed and non-directed methods. Directed sea turtle fisheries consisted primarily of gill netting, harpooning, diving, and turning. Sea turtles were also captured incidentally by a variety of methods used to commercially capture fish: haul seines, fish gill nets, shrimp trawls and pound nets. Although the turtle by-catch from these individual fisheries varied considerably, the total catch from all the fisheries combined was significant. With the exceptions of some early directed gill net fisheries (e.g. Texas and east central Florida), and the lingering fishery at Cedar Key, the U.S. commercial sea turtle fishery probably consisted mainly of turtles taken incidentally.

The sea turtle landings and values from the northeastern U.S. (RI - NC) were limited with the New Jersey fishery being the most extensive (Tables 1 & 2). The southeastern commercial turtle fishery was flourishing by 1890, and the Florida sea turtle fishery were the most extensive of any other state in the U.S. Louisiana turtle landings were moderate, but consistent for 35 years, and Texas had extensive landings

in the late 1900's. Puerto Rican and Hawaiian landings were consistently moderate.

The turtle landings in the northeast were predominantly a by-catch from the pound net fishery with some otter trawl, (listed as shrimp trawl) seine, and other miscellaneous by-catches (Table 2). The Florida turtle fishery was predominantly from gill nets with some by-catch landings from other fisheries, particularly shrimp trawls. The Louisiana turtle landings were predominantly shrimp trawl by-catch, with some early inshore net landings. Texas landings resulted from directed gill net and seine fisheries, and some early shrimp trawl by-catch. Puerto Rico and Hawaii used a wide variety of artisanal gear ranging from small gill nets to spears.

Turtle landings by month were recorded only from Florida, Louisiana, and Hawaii (Table 4). Landings occurred year-round in all three states with May being the heaviest month in Florida, April in Louisiana, and October in Hawaii.

Turtle landings were reported by county, or parrish, district, or island for several states (Table 5). With the exception of Monroe County, FL, all landings by county were captured in the immediate vicinity. The green turtle landings from Monroe county were imported from the Caribbean and landed at Key West.

The price per kilogram for turtles varied considerably, ranging from \$0.02 to \$1.76/kg, depending on species, year and location (Table 6).

ACKNOWLEDGMENTS

I would like to thank Jorge Fernandez for his extraordinary efforts setting up the dbase data files and generating the myriad tables and graphs. This data recovery project was made possible through a grant from the Earth System Data and Information Management (ESDIM) Program of the U.S. National Oceanic and Atmospheric Administration (NOAA).

Appendix 1. The format for coding commercial sea turtle landings data.

COMMERCIAL U.S. SEA TURTLE LANDINGS

1. YEAR: _____ 2. MONTH: _____ 3. STATE: _____
4. DISTRICT: _____ 5. COUNTY _____ 6. SPECIES: _____
7. WEIGHT: _____ LB 8. VALUE: \$ _____ 8. GEAR: _____

CODES

STATE:

MA = Massachusetts
RI = Rhode Island
NY = New York
NJ = New Jersey
DE = Delaware
VI = Virginia
MD = Maryland
NC = North Carolina
FE = Florida East
FW = Florida West
LA = Louisiana
TX = Texas
PR = Puerto Rico
HI = Hawaii

SPECIES:

CC = Loggerhead
CM = Green
HB = Hawksbill
ST = Sea Turtle
TT = Turtle
TS = Turtle Shell

GEAR:

STW = Shrimp Trawl
GNN = Gill Net (anchor/set & drift)
GNR = Gill Net (runaround)
PNN = Pound Net
SNN = Seine (haul & common)
SPP = Spear
HND = Hand
GFS = Gaffs
TPS = Turtle traps (fresh H2O?)
STN = Sea Turtle Net
OFG = Other Fishing Gear (e.g "shore fisheries", dip net, hook
& line, SCUBA, unknown)

DISTRICTS: PR/FL/LA HI
 NH = North KA = Kauai
 SH = South HA = Hawaii
 ET = East MA = Maui
 WT = West OA = Oahu
 CL = Central MO = Molokai
 WE = East & West

COUNTIES/PARRISH:

Rhode Island:

NP = Newport
WA = Washington

New York:

New Jersey:

CM = Cape May
AT = Atlantic
MM = Monmouth
OC = Ocean
SM = Salem
CD = Cumberland

Delaware:

KT = Kent
NC = Newcastle
SX = Sussex

Virginia:

CC = Charles City
EC = Elizabeth City
GC = Gloucester
NF = Norfolk
NT = Northumberland
PA = Princes Anne
PG = Prince George
FF = Stafford
WM = Westmoreland
YK = York
AC = Accomac
MT = Mathews
LC = Lancaster
NH = Northampton

Maryland:

CL = Calvert
PG = Prince George
ST = Somerset
WC = Wicomico
CL = Caroline

North Carolina

BR = Brunswick
DR = Dare
BF = Beaufort
CT = Carteret
CU = Currituck

Florida (East):

NU = Nassau
VL = Volusia
DV = Duval
SJ = St. Johns
IR = Indian River
SL = St. Lucie
VL = Volusia
BD = Brevard
PB = Palm Beach
BR = Broward
DD = Dade

Florida (West):

ES = Escambia
LY = Levy
PC = Pasco & Citrus
MR = Monroe
FL = Franklin
WO = Walton & Okaloosa
DI = Dixie
PI = Pinellas
HO = Hillsboro

Georgia:

CH = Chatham

Louisiana

JN = Jefferson
OR = Orleans
SY = St. Tammany
TP = Tangipahoa
TB = Terrebonne
SM = St. Mary
PQ = Plaquemines
SB. St. Bernard

Texas:

AS = Aransas
CA = Calhoun
CN = Cameron
GN = Galveston
HS = Harris
MT = Matagorda
NU = Nueces

Appendix 2. The dbase structure of the data files.

Structure for database:
