U.S. DEPARTMENT OF COMMERCE
National Oceanic and Atmospheric Administration
National Environmental Satellite, Data, and Information Service

Cover Image: Data Stewardship Rating Diagram for NOAA JPSS Visible Infrared Imaging Radiometer Suite (VIIRS) Active Fires Environmental Data Record (EDR) from IDPS

Shades of green are used to represent level 1 through level 5 ratings; denoting Ad Hoc, Minimal, Intermediate, Advanced, and Optimal stages for each of the nine key components, respectively. The dark green level indicates all the practices are completely satisfied. The lighter green levels indicate only some of the practices are satisfied. The lightest green level indicates none of the practices are satisfied.

The stewardship maturity of NCEI data product, NOAA JPSS Visible Infrared Imaging Radiometer Suite (VIIRS) Active Fires Environmental Data Record (EDR) from IDPS, is assessed based on a reference stewardship maturity framework. The current maturity ratings of NOAA JPSS Visible Infrared Imaging Radiometer Suite (VIIRS) Active Fires Environmental Data Record (EDR) from IDPS are at Level 1 or higher for all nine key components with zero Level 1, zero Level 2, two Level 3, four Level 4, and three Level 5 key components.

The National Environmental Satellite, Data, and Information Service (NESDIS) manages the Nation's civil Earth-observing satellite systems, as well as global national data bases for meteorology, oceanography, geophysics, and solar-terrestrial sciences. From these sources, it develops and disseminates environmental data and information products critical to the protection of life and property, national defense, and the national economy, energy development and distribution, global food supplies, and the development of natural resources.

Publication in the NOAA Technical Memorandum series does not preclude later publication in scientific journals in expanded or modified form. The NESDIS series of NOAA Technical Reports is a continuation of the former NESS and EDIS series of NOAA Technical Reports and the NESC and EDS series of Environmental Science Services Administration (ESSA) Technical Reports.

Copies of earlier reports may be available by contacting NESDIS Chief of Staff, NOAA/NESDIS, 1335 East-West Highway, SSMC1, Silver Spring, MD 20910, (301) 713-3578.

Preface

In response to the President's Open Government Initiative and related policies, NOAA has committed to providing improved public access to all of its environmental information, to enable research and commercial innovation through ease of data discovery and use [Casey, 2016].

OneStop supports NOAA's efforts by leveraging existing access technologies and infusing specific innovations to provide improved discover, access, and visualization services for NOAA's data. Also, OneStop is viewed by a NESDIS as a pathfinder effort with an initial focus on selected high-priority datasets from NESDIS and other program data meeting OneStop standards, but eventually scalable across NOAA's data. Lastly, OneStop is implementing the USGEO Common Framework for Earth Observation Data and leveraging/supporting the NOAA Big Data Project (BDP) and Big Earth Data Initiative (BEDI) [Casey, 2016].

As with any process of improvement planning, agencies need to find out where they are in terms of their compliance to the federal regulations and what they need to do if any areas of non-compliance are identified. To this end, a unified framework would be beneficial for assessing the current stage of stewardship practices applied to individual datasets and for providing a road map that will guide future investments towards enhanced stewardship of environmental datasets. The value and quality of a dataset depends in part on the stewardship practices applied after its development and production. Therefore, a unified framework providing a holistic view of the quality of stewardship practices applied to individual datasets is beneficial to data stewards and users [Casey, 2016].

The Data Stewardship Maturity Matrix (DSMM), jointly developed by domain (data management, technology, and science) subject matter experts from NOAA's National Centers for Environmental Information (NCEI) and Cooperative Institute for Climate and Satellites – North Carolina (CICS-NC), provides such a consistent framework [Peng *et al.*, 2016]. The DSMM, leveraging institutional knowledge and community practices and standards, defines a graduated maturity scale for each of nine key components of scientific data stewardship to enable a consistent assessment of the measureable stewardship practices applied to a given data set or product.

The NOAA Data Stewardship Maturity Technical Series captures stewardship maturity assessment results for individual datasets, provides consistent representation and citable documents of those assessments, ensures transparency, and allows better data quality information integration and content-based search and discovery of NOAA data.

Data Stewardship Maturity Report for NOAA JPSS Visible Infrared Imaging Radiometer Suite (VIIRS) Active Fires Environmental Data Record (EDR) from IDPS

1. Introduction

1.1 Purpose

The purpose of this document is to describe the results of stewardship maturity assessment for NOAA Climate Data Record for Mean Layer Temperature (Upper Troposphere & Lower Stratosphere from UCAR, Version 2, utilizing the Scientific Data Stewardship Maturity Matrix or DSMM [Peng, et al, 2016]. DSMM defines levels of stewardship maturity stages for Preservability, Accessibility, Usability, Production Sustainability, Data Quality Assurance, Data Quality Control/Monitoring, Data Quality Assessment, Transparency/Traceability, and Data Integrity key components. Each of these components is ranked from ‘Ad hoc’ to ‘Optimal’ (see Appendix I). This report is based on evaluation performed by NOAA OneStop metadata specialists working with Subject Matter Experts and utilizing the DSMM template [Peng, 2016].

1.2 Scope

Assessing stewardship maturity - the current state of how datasets are documented, preserved, stewarded, and made accessible publicly, is a critical step towards meeting U.S. federal regulations, organizational requirements, and user needs [Peng et al., 2016]. The goal of this document is to provide consistent and transparent stewardship maturity information to data users and decision-makers.

1.3 Dataset Abstract

This dataset contains a high quality operational environmental data record (EDR) that contains pinpoint locations of active fires (AF) as identified by an algorithm based on the Moderate Resolution Imaging Spectroradiometer (MODIS) Fires and Thermal Anomalies Collection 4 product, but improved upon and adapted for use by the Visible Infrared Imaging Radiometer (VIIRS) instrument onboard the Suomi-NPP satellite. The product also contains quality information which provides support information on the quality of fire retrievals. The algorithm utilizes sensor data from the 4 micron and 11 micron spectral bands (M13 and M15), at a spatial resolution of 750 meters at nadir to deliver a list of fire pixels at a given location on Earth approximately every 12 hours. By default, IDPS VIIRS AF data obtained from the Comprehensive Large Array-Data Stewardship System (CLASS) are distributed as aggregated files of four 86-second granules in Hierarchical Data Format v.5 (HDF5) file format with metadata attributes included.

1.4 Document Maintenance

This document is generated and maintained by NOAA's National Centers for Environmental Information. More on policy is available at <https://www.ncei.noaa.gov/>.

2. Results

The data stewardship maturity assessment information is summarized in Table 1. Each component is displayed along with its corresponding score in a color-coded table.

Table 3. Stewardship Maturity Levels and Detailed Justifications for Each of Nine DSMM Key Components for the Dataset.

DSMM Key Component	Stewardship Maturity Rating, Justification, and Comments
Preservability	<p>Level 4.5</p> <ul style="list-style-type: none">▪ Archived by NCEI which is a NOAA designated archive compliant to NARA standards.▪ Metadata following ISO 19115-2.▪ Compliant to OIAS RM▪ Plans to update metadata to ISO 19115-1 at a later date and may be a pilot dataset for the OneStop initiative.▪ Using CLASS <p>Comments: CLASS is CMMI-Level 3</p>
Accessibility	<p>Level 5</p> <ul style="list-style-type: none">▪ Collection level searchable online▪ Direct file download available CLASS FTP: ftp://ftp-npp.bou.class.noaa.gov/▪ CLASS ordering : http://www.class.noaa.gov/saa/products/search?datatype_family=VIIRS_EDR▪ Granules searchable and orderable via CLASS▪ CLASS has dissemination reports available internally and externally. Users have to e-mail the CLASS Help Desk to request access to the metrics tools. <p>Comments: A CLASS improvement (GEARS) is in the works.</p>
Usability	<p>Level 4.5</p> <ul style="list-style-type: none">▪ HDF5 data format▪ ATBD/OAD/CDFCB/User Guide/SRS/Data Dictionary available online: https://www.jpss.noaa.gov/sciencedocs.html▪ Data flow diagram available online: https://www.star.nesdis.noaa.gov/jpss/documents/AMM/NPP/Land_AF_Prov.pdf▪ Data paper published in peer-reviewed journal: https://doi.org/10.1002/2013JD020453 (external link)▪ Data visualization capability and data download in multiple formats: https://viirsfire.geog.umd.edu/maps▪ https://www.star.nesdis.noaa.gov/jpss/EDRs/products_activeFires.php#prod0▪ CLASS has deaggregating/subsetting options for downloads. <p>Comments: Multiple visualization options through JPSS LTM and UMD project page. Multiple formats available for CONUS through the UMD Active Fires link. No known external rankings.</p>

Table 3. Stewardship Maturity Levels and Detailed Justifications for Each of Nine DSMM Key Components for the Dataset.	
DSMM Key Component	Stewardship Maturity Rating, Justification, and Comments
Production Sustainability	<p>Level 5</p> <ul style="list-style-type: none"> ▪ In addition to institutional commitment within NOAA/JPSS/STAR there is external commitment from the USFS, Univ of MD, and Univ of Colorado. ▪ Product improvement process in place (Currently working through different stages of validation. Stage one validation complete.) ▪ New products in development for this program including a new finer resolution product in addition to algorithm improvements for the legacy product. NDE product is in the works. See this presentation for specific product improvements https://www.orbit.nesdis.noaa.gov/star/documents/meetings/2015JPSSAnnual/dayFour/07_Session7c_Csiszar_%20Fire.pdf <p>Comments:</p>
Data Quality Assurance	<p>Level 4</p> <ul style="list-style-type: none"> ▪ Product maturity document available online that outlines the rigorous QA/QC controls implemented on the product: https://www.star.nesdis.noaa.gov/jpss/AlgorithmMaturity.php ▪ QF for TB may be considered data quality metadata at the file level <p>Comments: No known external reviews.</p>
Data Quality Control/Monitoring	<p>Level 3.5</p> <ul style="list-style-type: none"> ▪ Data quality control and monitoring steps are available online per the JPSS validation requirements. Anomaly detection procedure, reporting, and remedies are also available as a requirement for the validated (operational) maturity phase. https://www.star.nesdis.noaa.gov/jpss/AlgorithmMaturity.php ▪ Long term product monitoring application available to the public: https://www.star.nesdis.noaa.gov/jpss/EDRs/index.php# <p>Comments: No data quality information in the metadata record.</p>
Data Quality Assessment	<p>Level 3</p> <ul style="list-style-type: none"> ▪ Beta & Provisional (Research) & Validated (Operational) product assessments are available in the algorithm maturity review documents available here: https://www.star.nesdis.noaa.gov/jpss/AlgorithmMaturity.php ▪ ATBD available here: https://www.jpss.noaa.gov/sciencedocs.html ▪ Validated (Operational) product evaluation paper published in peer-reviewed journal: https://doi.org/10.1002/2013JD020453 (external link) <p>Comments: No data quality information in the metadata record. No known external rankings.</p>

Table 3. Stewardship Maturity Levels and Detailed Justifications for Each of Nine DSMM Key Components for the Dataset.	
DSMM Key Component	Stewardship Maturity Rating, Justification, and Comments
Transparency / Traceability	<p>Level 4</p> <ul style="list-style-type: none"> ▪ ATBD/OAD available here: https://www.jpss.noaa.gov/sciencedocs.html ▪ DOI pending ▪ CLASS Assigned OID ▪ Evaluation paper published in peer-reviewed journal: https://doi.org/10.1002/2013JD020453 (external link) ▪ Under NOAA JPSS Office (NJO) Configuration Management Plan: https://www.star.nesdis.noaa.gov/JPSS/Documents/CM/JPSS_STAR_AIT_SCM_Plan.pdf <p>Comments: Paper could also be linked for data quality assessment. Verify if they have system information available online for 5.</p>
Data Integrity	<p>Level 5</p> <ul style="list-style-type: none"> ▪ CLASS offers data signatures option for downloads and checksums available. ▪ NCEI can certify data for a fee. https://www.ncdc.noaa.gov/customer-support/certification-data ▪ NCEI data integrity is verified at ingest. ▪ CLASS verifies checksums at ingest and at archive <p>Comments:</p>

3. Acknowledgment

This work is supported by the NOAA OneStop Project.

We thank the dataset POCs for their valuable input, as well as the collaborative efforts of the OneStop teams, especially the Metadata team. We would also like to show appreciation to Ge Peng for her contributions.

The draft of this data stewardship maturity report is systematically generated by a tool created by Kieran Hodnett and populated with the stewardship maturity assessment done by the author(s) of this report. The tool was developed based on a Word template created collaboratively by Robert Partee II, Raisa Ionin, Paul Lemieux III, Ge Peng, Don Collins, and Sonny Zinn with helpful input from the NOAA Central Library and the NCEI Communication Team.

Appendix I: The Scientific Data Stewardship Maturity Matrix (DSMM)

Table A1: This matrix (Version: NCDC-CICS-SMM-0001-Rev.1. 12/09/2014) describes the criterion used to evaluate data stewardship maturity for each of the nine DSMM key components [Peng *et al.*, 2015].

DSMM Component	Level 1 <i>Ad hoc</i> Little or no management	Level 2 <i>Minimal</i> Limited management	Level 3 <i>Intermediate</i> Defined management, partially implemented	Level 4 <i>Advanced</i> Well-defined management, fully implemented	Level 5 <i>Optimal</i> Full management, audited, measured, controlled
<i>Preservability</i> <i>(The state of being preservable)</i>	Any storage location Data only	Non-designated repository Redundancy Limited archiving metadata	Designated archive Redundancy Community-standard archiving metadata Conforming to limited archiving standards	Level 3 + Conforming to community archiving standards	Level 4 + Archiving process performance controlled, measured, and audited Future archiving standard changes planned
<i>Accessibility</i> <i>(The state of being searchable and accessible publicly)</i>	Not publically available person-to-person	Publically available direct file download (e.g., via anonymous FTP server) Collection or dataset level searchable online	Level 2 + Non-standard data service Limited data server performance Granule/file level searchable Limited search metrics	Level 3 + Community-standard data service Enhanced data server performance Conforming to community search metrics Dissemination report metrics defined and implemented internally	Level 4 + Dissemination reports available online Future technology and standard changes planned

<i>Usability</i> <i>(The state of being easy to use)</i>	<p>Extensive product-specific knowledge required</p> <p>No documentation online</p>	<p>Non-standard data format</p> <p>Limited documentation (e.g., user's guide online)</p>	<p>Community standard-based interoperable format & metadata</p> <p>Documentation (e.g. source code, product algorithm document, processing or/and data flow diagram) online</p>	<p>Level 3 +</p> <p>Basic capability (e.g., subsetting, aggregating) & data characterization overall/global,</p> <p>e.g., climatology, error estimates) available online</p>	<p>Level 4 +</p> <p>Enhanced online capability (e.g., visualization, multiple data formats)</p> <p>Community metrics of data characterization (regional/cell) online</p> <p>External ranking</p>
<i>Production Sustainability</i> <i>(The state of data production being sustainable and extendable)</i>	<p>Ad Hoc or Not applicable</p> <p>To obligation or deliverable requirement</p>	<p>Short-term</p> <p>Individual PI's commitment (grant obligations)</p>	<p>Medium-term</p> <p>Institutional commitment (contractual deliverables with specs and schedule defined)</p>	<p>Long-term</p> <p>Institutional commitment</p> <p>Product improvement process in place</p>	<p>Level 4 +</p> <p>National or international commitment</p> <p>Changes for echnology planned</p>
<i>Data Quality Assurance</i> <i>(The state of data quality being assured)</i>	<p>Data quality assurance (DQA) procedure unknown or none</p>	<p>Ad Hoc and random</p> <p>QA procedure not defined and documented</p>	<p>DQA procedure defined and documented and partially implemented</p>	<p>DQA procedure well documented, fully implemented and available online with master reference data</p> <p>Limited data quality assurance metadata</p>	<p>Level 4 +</p> <p>DQA procedure monitored and reported</p> <p>Conforming to community quality metadata & standards</p> <p>External review</p>

Data Quality Control/Monitoring <i>The state of data quality being controlled and monitored</i>	None or Sampling unknown or spotty Analysis unknown or random in time	Sampling and analysis are regular in time and space Limited product-specific metrics defined & implemented	Level 2 + Sampling and analysis are frequent and systematic but not automatic Community metrics defined and partially implemented Procedure documented and available online	Level 3 + Anomaly detection procedure well-documented and fully implemented using community metrics, automatic, tracked and reported Limited quality monitoring metadata	Level 4 + Cross-validation of temporal & spatial characteristics Physical consistency check Conforming to community quality metadata & standards
Data Quality Assessment <i>(The state of data quality being assessed)</i>	Algorithm/method/model Theoretical basis assessed (methods and results online)	Level 1 + Research product assessed (methods and results online)	Level 2 + Operational product assessed (methods and results online)	Level 3 + Quality metadata assessed Limited quality assessment metadata	Level 4 + Assessment performed on a recurring basis Conforming to community quality metadata & standards External ranking
Transparency/Traceability <i>(The state of being transparent, trackable, and traceable)</i>	Limited product information available Person-to-person	Product information available in literature	Algorithm Theoretical Basis Document (ATBD) & source code online Dataset configuration managed (CM) Unique Object Identifier (OID) assigned (dataset, documentation, source code) Data citation tracked (e.g., utilizing Digital Object Identifier	Level 3 + Operational Algorithm Description (OAD) online, OID assigned, and under CM	Level 4 + System information online Complete data provenance online

<i>Data Integrity</i> <i>(The state of data integrity being verifiable)</i>	Unknown or no data ingest integrity check	Data ingest integrity verifiable (e.g. checksum technology)	(DOI) system) Level 2 + Data archive integrity verifiable	Level 3 + Data access integrity verifiable Conforming to community data integrity technology standard	Level 4 + Data authenticity verifiable (e.g., data signature technology) Performance of data integrity check monitored and reported
