Data Stewardship Maturity Report for JPSS Microwave Integrated Retrieval System (MiRS) Advanced Technology Microwave Sounder (ATMS) Sounding Products

Table 1 Legend				
Level 1	Level 2	Level 3	Level 4	Level 5
Ad Hoc	Minimal	Intermediate	Advanced	Optimal
Little or no management	Limited Management	Defined Management, partially implemented	Well-defined Management, fully implemented	Full Management, audited, measured, controlled

Table 1. Scores for the Nine DSMM Key Components at a Glance		
Preservability - 4.5	Accessibility - 5	Usability - 4.5
Production Sustainability - 5	Data Quality Assurance - 3.5	Data Quality Control/Monitoring - 4.75
Data Quality Assessment - 3.5	Transparency/Traceability - 3.5	Data Integrity - 5

National Environmental Satellite, Data, and Information Service

Cover Image: Data Stewardship Rating Diagram for JPSS Microwave Integrated Retrieval System (MiRS) Advanced Technology Microwave Sounder (ATMS) Sounding Products

Shades of green are used to represent level 1 through level 5 ratings; denoting Ad Hoc, Minimal, Intermediate, Advanced, and Optimal stages for each of the nine key components, respectively. The dark green level indicates all the practices are completely satisfied. The lighter green levels indicate only some of the practices are satisfied. The lightest green level indicates none of the practices are satisfied.

The stewardship maturity of NCEI data product, JPSS Microwave Integrated Retrieval System (MiRS) Advanced Technology Microwave Sounder (ATMS) Sounding Products, is assessed based on a reference stewardship maturity framework. The current maturity ratings of JPSS Microwave Integrated Retrieval System (MiRS) Advanced Technology Microwave Sounder (ATMS) Sounding Products are at Level 1 or higher for all nine key components with zero Level 1, zero Level 2, three Level 3, three Level 4, and three Level 5 key components.

The National Environmental Satellite, Data, and Information Service (NESDIS) manages the Nation's civil Earth-observing satellite systems, as well as global national data bases for meteorology, oceanography, geophysics, and solar-terrestrial sciences. From these sources, it develops and disseminates environmental data and information products critical to the protection of life and property, national defense, and the national economy, energy development and distribution, global food supplies, and the development of natural resources.

Publication in the NOAA Technical Memorandum series does not preclude later publication in scientific journals in expanded or modified form. The NESDIS series of NOAA Technical Reports is a continuation of the former NESS and EDIS series of NOAA Technical Reports and the NESC and EDS series of Environmental Science Services Administration (ESSA) Technical Reports.

Copies of earlier reports may be available by contacting NESDIS Chief of Staff, NOAA/NESDIS, 1335 East-West Highway, SSMC1, Silver Spring, MD 20910, (301) 713-3578.

Preface

In response to the President's Open Government Initiative and related policies, NOAA has committed to providing improved public access to all of its environmental information, to enable research and commercial innovation through ease of data discovery and use [Casey, 2016].

OneStop supports NOAA's efforts by leveraging existing access technologies and infusing specific innovations to provide improved discover, access, and visualization services for NOAA's data. Also, OneStop is viewed by a NESDIS as a pathfinder effort with an initial focus on selected high-priority datasets from NESDIS and other program data meeting OneStop standards, but eventually scalable across NOAA's data. Lastly, OneStop is implementing the USGEO Common Framework for Earth Observation Data and leveraging/supporting the NOAA Big Data Project (BDP) and Big Earth Data Initiative (BEDI) [Casey, 2016].

As with any process of improvement planning, agencies need to find out where they are in terms of their compliance to the federal regulations and what they need to do if any areas of non-compliance are identified. To this end, a unified framework would be beneficial for assessing the current stage of stewardship practices applied to individual datasets and for providing a road map that will guide future investments towards enhanced stewardship of environmental datasets. The value and quality of a dataset depends in part on the stewardship practices applied after its development and production. Therefore, a unified framework providing a holistic view of the quality of stewardship practices applied to individual datasets is beneficial to data stewards and users [Casey, 2016].

The Data Stewardship Maturity Matrix (DSMM), jointly developed by domain (data management, technology, and science) subject matter experts from NOAA's National Centers for Environmental Information (NCEI) and Cooperative Institute for Climate and Satellites – North Carolina (CICS-NC), provides such a consistent framework [Peng *et al.*, 2016]. The DSMM, leveraging institutional knowledge and community practices and standards, defines a graduated maturity scale for each of nine key components of scientific data stewardship to enable a consistent assessment of the measureable stewardship practices applied to a given data set or product.

The NOAA Data Stewardship Maturity Technical Series captures stewardship maturity assessment results for individual datasets, provides consistent representation and citable documents of those assessments, ensures transparency, and allows better data quality information integration and content-based search and discovery of NOAA data.

Data Stewardship Maturity Report for JPSS Microwave Integrated Retrieval System (MiRS) Advanced Technology Microwave Sounder (ATMS) Sounding Products

1. Introduction

1.1 Purpose

The purpose of this document is to describe the results of stewardship maturity assessment for NOAA Climate Data Record for Mean Layer Temperature (Upper Troposphere & Lower Stratosphere from UCAR, Version 2, utilizing the Scientific Data Stewardship Maturity Matrix or DSMM [Peng, et al, 2016]. DSMM defines levels of stewardship maturity stages for Preservability, Accessibility, Usability, Production Sustainability, Data Quality Assurance, Data Quality Control/Monitoring, Data Quality Assessment, Transparency/Traceability, and Data Integrity key components. Each of these components is ranked from ‘Ad hoc’ to ‘Optimal’ (see Appendix I). This report is based on evaluation performed by NOAA OneStop metadata specialists working with Subject Matter Experts and utilizing the DSMM template [Peng, 2016].

1.2 Scope

Assessing stewardship maturity - the current state of how datasets are documented, preserved, stewarded, and made accessible publicly, is a critical step towards meeting U.S. federal regulations, organizational requirements, and user needs [Peng et al., 2016]. The goal of this document is to provide consistent and transparent stewardship maturity information to data users and decision-makers.

1.3 Dataset Abstract

This dataset contains temperature and humidity profiles from the NOAA Microwave Integrated Retrieval System (MIRS) using sensor data from the Advanced Technology Microwave Sounder (ATMS) onboard the Suomi National Polar-orbiting Partnership (S-NPP) satellite. ATMS is a cross-track scanner with 22 channels in spectral bands from 23 GHz through 183 GHz. MIRS was developed by the NOAA/NESDIS Center for Satellite Application and Research (STAR) and is produced operationally at the NOAA/NESDIS Office of Satellite and Product Operations (OSPO). The sounding (SND) products file contains temperature and water vapor profiles at 850, 900 and 950 millibars. Quality control metrics and flags defining retrieval product quality are also provided. Each product file encompasses one 32-second granule of data, corresponding to 4 scan lines of ATMS data. The products are distributed in netCDF-4 file format with metadata attributes included.

1.4 Document Maintenance

This document is generated and maintained by NOAA's National Centers for Environmental Information. More on policy is available at <https://www.ncei.noaa.gov/>.

2. Results

The data stewardship maturity assessment information is summarized in Table 1. Each component is displayed along with its corresponding score in a color-coded table.

Table 3. Stewardship Maturity Levels and Detailed Justifications for Each of Nine DSMM Key Components for the Dataset.

DSMM Key Component	Stewardship Maturity Rating, Justification, and Comments
Preservability	Level 4.5 ▪ Archived by NCEI which is a NOAA designated archive compliant to NARA standards. ▪ Metadata following ISO 19115-2. ▪ Compliant to OIAS RM. ▪ Plans to update metadata to ISO 19115-1 at a later date and may be a pilot dataset for the OneStop initiative. ▪ Using CLASS. Comments: CLASS is CMMI-Level 3. No known external audits on the archiving processes.
Accessibility	Level 5 ▪ Collection level searchable online ▪ CLASS ordering: http://www.class.noaa.gov/saa/products/search?datatype_family=NDE_L2 ▪ Granules searchable and orderable via CLASS. ▪ Direct file download available via CLASS FTP: ftp://ftp-npp.bou.class.noaa.gov/ ▪ CLASS has dissemination reports available internally and externally. Users have to e-mail the CLASS Help Desk to request access to the metrics tools. ▪ New technology for OneStop search and discovery planned (i.e. ElasticSearch, Hyrax Servers, etc.) This is part of the CDR data group that will be OneStop ready. Comments: A CLASS improvement (GEARS) is in the works.
Usability	Level 4.5 ▪ Community standard netCDF data format following CF and ACDD conventions. ▪ Data paper [Boukabara, Garrett, et al, 2013] published in peer-reviewed journal available online here: https://doi.org/10.1002/2013JD020448 ▪ CLASS has aggregating/subsetting options for downloads. ▪ Error estimates available in the ATBD [Boukabara, Grassotti, Garrett, et al., 2013] available online here: https://www.star.nesdis.noaa.gov/jpss/Docs.php ▪ JPSS Visualization Long Term Monitoring (LTM) tool available for MIRS NDE products: https://www.star.nesdis.noaa.gov/jpss/EDRs/products_MiRS.php Comments: No known external rankings.

Table 3. Stewardship Maturity Levels and Detailed Justifications for Each of Nine DSMM Key Components for the Dataset.	
DSMM Key Component	Stewardship Maturity Rating, Justification, and Comments
Production Sustainability	Level 5 ▪ Long-term institutional commitment from NESDIS to further develop and improve NOAA Unique Products (NUPs) ▪ Versioning process in place that captures upgrade history of the algorithm. ▪ National commitment from: National Weather Service, NASA, CIRA, Univ of Wisconsin among others. ▪ Global commitment from Taiwan Weather Bureau, CPTEC Brazil, UK Met Office and Max Planck Institute and others. ▪ Changes for processing environment technology planned as this product will transit out of NDE and into the new PDA hardware. Comments: No comments.
Data Quality Assurance	Level 4.5 ▪ Quality assurance procedure documented in the ATBD [Boukabara, Grassotti, et al, 2013] available online here: https://www.star.nesdis.noaa.gov/jpss/Docs.php ▪ DQA procedures are fully implemented and well documented in the STAR JPSS Quality Assurance Plan [Mikles and Liu, 2016] available online here: https://www.star.nesdis.noaa.gov/jpss/Docs.php ▪ Quality flags available at the file level that can be considered limited data quality assurance metadata. Comments: No known external reviews.
Data Quality Control/Monitoring	Level 4.75 ▪ OSPO PAL will perform product quality monitoring as part of the Product Monitoring project (per the User’s Guide). ▪ Daily cross-validation with ECMWF and GDAS models; periodic cross-validation with radiosondes (NPROVS). ▪ Product quality is monitored by ESPC Ops and e-mail alerts are automatically generated when anomalies occur. ▪ Additional metadata file in XML format is generated with each file that contains statistical information that is used to monitor product data quality and processing status. It is used internally at OSPO by monitoring team. ▪ Users can contact the ESPC help desk 24/7 for information about the data product and they can resolve issues through coordination with the PAL. Comments: No known physical consistency checks.

Table 3. Stewardship Maturity Levels and Detailed Justifications for Each of Nine DSMM Key Components for the Dataset.	
DSMM Key Component	Stewardship Maturity Rating, Justification, and Comments
Data Quality Assessment	Level 3.5 ▪ Beta & Provisional (Research) & Validated (Operational) product assessments are available in the algorithm maturity review documents available here: https://www.star.nesdis.noaa.gov/jpss/AlgorithmMaturity.php ▪ ATBD [Boukabara, Grassotti, Garrett, and Mims, 2013] is available online here: https://www.star.nesdis.noaa.gov/jpss/Docs.php ▪ Research product assessed in literature [Boukabara, Garrett, et al, 2013] and available online here: https://doi.org/10.1002/2013JD020448 ▪ Operational product assessed [Grassotti, Zhan, Boukabara, et al, 2015] and available online here: https://agu.confex.com/agu/fm15/webprogram/Paper72920.html ▪ Data quality assessment information in the auxiliary metadata file that is generated by the system. Comments: No known external rankings.
Transparency / Traceability	Level 3.5 ▪ DOI: https://doi.org/10.7289/V51V5C1X ▪ CLASS Assigned OID: MIRSASND ▪ Product information available in literature [Boukabara, Garrett, et al, 2013] and available online here: https://doi.org/10.1002/2013JD020448 ▪ ATBD [Boukabara, Grassotti, Garrett, et al., 2013] available online here: https://www.star.nesdis.noaa.gov/jpss/Docs.php ▪ Configuration Management Plan [Zhao, 2014] available online here: https://www.star.nesdis.noaa.gov/jpss/Docs.php Comments: No OAD available.
Data Integrity	Level 5 ▪ CLASS offers data signatures option for downloads and checksums available. ▪ File level checksums are verified at ingest and at archive. ▪ CLASS maintains a copy of the checksum for validation during dissemination and that checksum is used for validation during the staging process when an order is fulfilled. ▪ Discrepancies identified in checksum validation are automatically reported to CLASS team for investigative purposes. Comments: No comments

3. Acknowledgment

This work is supported by the NOAA OneStop Project.

We thank the dataset POCs for their valuable input, as well as the collaborative efforts of the OneStop teams, especially the Metadata team. We would also like to show appreciation to Ge Peng for her contributions.

The draft of this data stewardship maturity report is systematically generated by a tool created by Kieran Hodnett and populated with the stewardship maturity assessment done by the author(s) of this report. The tool was developed based on a Word template created collaboratively by Robert Partee II, Raisa Ionin, Paul Lemieux III, Ge Peng, Don Collins, and Sonny Zinn with helpful input from the NOAA Central Library and the NCEI Communication Team.

Appendix I: The Scientific Data Stewardship Maturity Matrix (DSMM)

Table A1: This matrix (Version: NCDC-CICS-SMM-0001-Rev.1. 12/09/2014) describes the criterion used to evaluate data stewardship maturity for each of the nine DSMM key components [Peng *et al.*, 2015].

DSMM Component	Level 1 <i>Ad hoc</i> Little or no management	Level 2 <i>Minimal</i> Limited management	Level 3 <i>Intermediate</i> Defined management, partially implemented	Level 4 <i>Advanced</i> Well-defined management, fully implemented	Level 5 <i>Optimal</i> Full management, audited, measured, controlled
<i>Preservability</i> <i>(The state of being preservable)</i>	Any storage location Data only	Non-designated repository Redundancy Limited archiving metadata	Designated archive Redundancy Community-standard archiving metadata Conforming to limited archiving standards	Level 3 + Conforming to community archiving standards	Level 4 + Archiving process performance controlled, measured, and audited Future archiving standard changes planned
<i>Accessibility</i> <i>(The state of being searchable and accessible publicly)</i>	Not publically available person-to-person	Publically available direct file download (e.g., via anonymous FTP server) Collection or dataset level searchable online	Level 2 + Non-standard data service Limited data server performance Granule/file level searchable Limited search metrics	Level 3 + Community-standard data service Enhanced data server performance Conforming to community search metrics Dissemination report metrics defined and implemented internally	Level 4 + Dissemination reports available online Future technology and standard changes planned

<i>Usability</i> <i>(The state of being easy to use)</i>	Extensive product-specific knowledge required No documentation online	Non-standard data format Limited documentation (e.g., user's guide online)	Community standard-based interoperable format & metadata Documentation (e.g. source code, product algorithm document, processing or/and data flow diagram) online	Level 3 + Basic capability (e.g., subsetting, aggregating) & data characterization overall/global, e.g., climatology, error estimates) available online	Level 4 + Enhanced online capability (e.g., visualization, multiple data formats) Community metrics of data characterization (regional/cell) online External ranking
<i>Production Sustainability</i> <i>(The state of data production being sustainable and extendable)</i>	Ad Hoc or Not applicable To obligation or deliverable requirement	Short-term Individual PI's commitment (grant obligations)	Medium-term Institutional commitment (contractual deliverables with specs and schedule defined)	Long-term Institutional commitment Product improvement process in place	Level 4 + National or international commitment Changes for echnology planned
<i>Data Quality Assurance</i> <i>(The state of data quality being assured)</i>	Data quality assurance (DQA) procedure unknown or none	Ad Hoc and random QA procedure not defined and documented	DQA procedure defined and documented and partially implemented	DQA procedure well documented, fully implemented and available online with master reference data Limited data quality assurance metadata	Level 4 + DQA procedure monitored and reported Conforming to community quality metadata & standards External review

Data Quality Control/Monitoring <i>The state of data quality being controlled and monitored</i>	None or Sampling unknown or spotty Analysis unknown or random in time	Sampling and analysis are regular in time and space Limited product-specific metrics defined & implemented	Level 2 + Sampling and analysis are frequent and systematic but not automatic Community metrics defined and partially implemented Procedure documented and available online	Level 3 + Anomaly detection procedure well-documented and fully implemented using community metrics, automatic, tracked and reported Limited quality monitoring metadata	Level 4 + Cross-validation of temporal & spatial characteristics Physical consistency check Conforming to community quality metadata & standards
Data Quality Assessment <i>(The state of data quality being assessed)</i>	Algorithm/method/model Theoretical basis assessed (methods and results online)	Level 1 + Research product assessed (methods and results online)	Level 2 + Operational product assessed (methods and results online)	Level 3 + Quality metadata assessed Limited quality assessment metadata	Level 4 + Assessment performed on a recurring basis Conforming to community quality metadata & standards External ranking
Transparency/Traceability <i>(The state of being transparent, trackable, and traceable)</i>	Limited product information available Person-to-person	Product information available in literature	Algorithm Theoretical Basis Document (ATBD) & source code online Dataset configuration managed (CM) Unique Object Identifier (OID) assigned (dataset, documentation, source code) Data citation tracked (e.g., utilizing Digital Object Identifier	Level 3 + Operational Algorithm Description (OAD) online, OID assigned, and under CM	Level 4 + System information online Complete data provenance online

<i>Data Integrity</i> <i>(The state of data integrity being verifiable)</i>	Unknown or no data ingest integrity check	Data ingest integrity verifiable (e.g. checksum technology)	(DOI) system) Level 2 + Data archive integrity verifiable	Level 3 + Data access integrity verifiable Conforming to community data integrity technology standard	Level 4 + Data authenticity verifiable (e.g., data signature technology) Performance of data integrity check monitored and reported
