## 2016

The Virginia Game Fish Tagging Program (VGFTP) started in 1995 primarily funded from Virginia saltwater fishing license funds and matching funds from VIMS.

The program's origins started in the 1980's when Mr. Claude Bain, III, former director of the Virginia Saltwater Fishing Tournament (VSFT) under the Virginia Marine Resources Commission (VMRC) approached Mr. Jon Lucy at the Virginia Institute of Marine Science (VIMS) about developing a tagging project on red drum.

Bain and Lucy realized not only were critical habitat and seasonal movement

data limited for red drum in state waters, a similar situation existed for a number of other marine recreational species like black drum, cobia, speckled trout, and tautog. As a result, they decided to explore developing a multi-species, angler-assisted tagging program.

Mr. Lewis Gillingham, is the current VMRC Virginia Saltwater Fishing Tournament (VSFT) Director and manages the VMRC portion of the tagging program. Ann Burnett also of the VSFT, deserves special recognition for dedication to the program, as she has more experience than any other staff member with the project (having been there from the start!). Her consistent work, data management and guidance, keep the program on track. Also from the VMRC, Mr. Todd Sperling, deserves credit for taking the VGFTP to new levels with evolving web-based platforms and query options for the VGFTP database program database.

Ms. Susanna Musick, Marine Recreation Specialist in the Marine Advisory Program at VIMS, is the Principal Investigator for the tagging program. Also at VIMS, Manisha Pant provides assistance to the tagging program by assisting with data entry for our most prolific taggers. Ms. Cheryl Teagle coordinates purchasing tags while helping to manage the tagging program budget. VIMS Publications provides critical assistance in the preparation of posters and annual reports. Ms. Susan Stein in the VIMS' Publications Center handles the printing production of annual reports. The VGFTP is a team effort by many critical players, especially the anglers who devote significant time and effort to tagging target fish and reporting fish recaptures.

# VIRGINIA GAME FISH TAGGING PROGRAM 2016

---

## Introduction

Through 2016, the Virginia Game Fish Tagging Program (VGFTP) has maintained a 21-year database of records for tagged and recaptured fish. The program is a cooperative project of the Virginia Saltwater Fishing Tournament (VSFT) under the Virginia Marine Resources Commission-(VMRC) and the Virginia Institute of Marine Science (VIMS) of the College of William and Mary (under the VIMS Marine Advisory Program).

The primary goal of the program is to train and maintain an experienced group of anglers who are willing to volunteer their time and effort to properly tag and release their fish catch. Data on tagged and recaptured fish are summarized in annual reports and are accessible on VIMS website: <http://www.vims.edu/vgftp/>. Time series data are organized and provided whenever requested by anglers, angling groups, researchers, and fishery managers.

Program participants are trained to tag only designated target species in Virginia waters. Participation in the program is capped at two hundred trained taggers. Supporting this number of taggers has been manageable when meeting tag and tagging equipment needs, performing timely data entry, and mailing of tag-recapture reports (and reward items) to anglers reporting catches of tagged fish.

Funding for the program is applied for annually through a competitive proposal process under the VMRC Recreational Fishing Advisory Board. The program funding requires the Board's positive recommendation, which then goes before the VMRC Commissioners for final approval. If funding is approved, Virginia Saltwater Recreational Fishing License Funds (administered by VMRC) primarily cover budget needs, with additional matching funds contributed by VIMS.

A cooperative but separate funding proposal from that of the VSFT office is submitted annually to the VMRC by VIMS. The VIMS portion of the program focuses primarily on coordinating, maintaining and purchasing all tags and tagging equipment (tag guns, tag sticks, tagging needles, and constructing measuring boards). Also included in the VIMS budget are local travel costs and costs for presenting program results at scientific meetings. VIMS also handles several printed materials including tagging training handouts, water-proof tagging data sheets, and laminated posters alerting anglers to target species and the telephone number for reporting recaptured fish. The design, printing and publication of annual reports also falls to VIMS, including data analysis and the publication and maintenance of digital reports on the VIMS website.

The VSFT office also submits a separate proposed budget. This budget predominantly covers expenses associated with purchasing reward items for recaptures and mailing such items (with printed Fish Recapture Reports) to people phoning in tagged fish recapture information. Reporters of tagged fish choose among various reward options including custom T-shirts, caps, sun visors, pewter fish pins, or plastic tackle organizers (as long as such items remain in stock).

Recapture awards encourage diverse members of the public (including commercial fishermen, seafood dealers, etc.) to call in reports of tagged fish they encounter. The reward system and recapture reports provide positive feedback to anglers and encourage them to continue to participate in the program and report future recaptures of tagged fish. Direct association of angler taggers with others in the angling community enhances program awareness, reminds anglers (and commercial fishers) of the importance of reporting tagged fish, and provides the angling community with positive fishery conservation role models. The program succeeds because of good teamwork across the angling community.

The tagging program documents annual and year-to-year movement and habitat utilization patterns of selected finfish species in Virginia waters. For certain species, the program documents significant coastal migrations. Many of these species spawn in the lower Bay or nearshore waters of Virginia and use Virginia estuarine and coastal waters as nursery and feeding grounds.

The program's results are of interest to the angling community and to fishery researchers and managers. The number and size distribution of fishes tagged each year compliment other research-based data sets and can help fishery managers gain a more comprehensive picture of sizes of fish released in the state's marine recreational fishery.

Tagging effort for flounder, red and black drum, speckled trout, cobia, spadefish, triggerfish and sheepshead primarily occurs in the Bay and nearshore coastal waters. However, tagging of tautog, black sea bass, spadefish and gray triggerfish occurs over much broader areas of the Bay and inshore-offshore waters. Tagging for structure-oriented species occurs on sites such as fishing piers, artificial reefs, the Chesapeake Bay Bridge Tunnel complex, shipwrecks and other bottom sites occurring from the lower Bay to sites offshore of Virginia.

In the past, tagging data from the Yorktown Power Station (York River) and the Center for Energy Conservation Power Station (Elizabeth River) helped to document these important over-wintering sites for various species, especially speckled trout and red drum. Historical tagging effort at these warm water discharge sites through cooperation with Virginia Dominion Power came to an end in 2014 due to the closure of those facilities, and that continues to be reflected in VGFTP data.

## Target species

Target species for 2016 appear below. Summer flounder replaced gray trout (weakfish) in 2000, the latest change to date.

Black Drum	<i>Pogonias cromis</i>
Black Sea Bass	<i>Centropristis striata</i>
Cobia	<i>Rachycentron canadum</i>
Summer Flounder	<i>Paralichthys dentatus</i>
Red Drum	<i>Sciaenops ocellatus</i>
Sheepshead	<i>Archosargus probatocephalus</i>
Spadefish	<i>Chaetodipterus faber</i>
Speckled Trout	<i>Cynoscion nebulosus</i>
Tautog	<i>Tautoga onitis</i>
(Gray) Triggerfish	<i>Balistes capriscus</i>

## Program Objectives

Basic objectives guide program activities. There are five main objectives:

(1) Develop and maintain a quality tagging program using a corps of trained angler taggers; tagging effort of these anglers should be directed to target species, especially where one can take advantage of significant numbers of non-legal fishes which anglers are readily discarding alive while complying with recreational fishing regulations.

(2) Where and when appropriate, direct program tagging effort toward opportunistic occurrences of strong year classes of fishes in Virginia's Bay and nearshore-offshore waters, especially species not traditionally subject to scientific tagging studies in such waters, i.e., red drum, black drum, speckled trout, tautog, sheepshead, spadefish, etc. The program does not target species currently monitored and/or targeted in

state waters by research-based tagging studies coordinated by fishery research agencies and institutions, in particular, striped bass.

(3) Maintain a database of tagged and recaptured fish records accessible to the angling community, but also of use to fishery researchers and managers as the database matures. Make summaries and reports of such data available to the angling community through annual reports, websites, presentations to angling clubs, kids fishing clinics, etc. and provide requested data to researchers and fishery managers.

(4) Use the tagging program to enhance education of marine anglers about the importance of reporting tagged fishes to appropriate organizations, agencies, and research institutions to enhance understanding and management of key fishery stocks important to Virginia's marine recreational fisheries.

(5) Use program results to educate the angling community about fishery conservation and management benefits directly connected with proper handling and releasing of non-legal fishes. Tag-recapture data prove that using proper catch and release fishing practices results in better angling catches both short-term and long-term.

The program maintains a group of experienced, trained, angler-taggers who can capitalize on opportunities to tag key species that often exhibit high abundance levels during a given fishing season. These events contribute to supporting specific fisheries in Virginia's valuable recreational fishery and take on even greater value when this program documents sizes and abundance of recreationally-targeted fish and the habitats they utilize.

## **Database Improvements**

As in previous years, Mr. Todd Sperling's (VMRC) skills are indispensable for managing the program's data files. Since 2009, data are quarantined whenever a recaptured fish species does not match that of the tagged fish (such records are linked by their specific fish tag number). This feature allows the review of such data inconsistencies, which may be the result of various issues, i.e., recaptured fish tag numbers being misread and thereby reported incorrectly, a recapture angler's mistake regarding the species of tagged fish they caught, etc. Such reporting irregularities seem to occur most frequently at fishing piers and other heavily fished shoreline locations.

Other cases may include "negative days at large" for recaptured fish, i.e., when a tagged fish's reported recapture date is earlier than the reported recapture date. Also, if a recaptured fish's size is significantly different from what would be expected, this may suggest either the person reporting the recapture badly estimated the fish's length, or the recaptured fish's tag number was reported incorrectly, etc.; such issues can then be investigated and hopefully clarified. These recapture data issues more often occur on reports called into the office and left on voice mail outside of regular office hours.

## **Details of Program Responsibilities**

In addition to handling the majority of recapture data entry, the VSFT office distributes tags, needles, etc. These items are regularly mailed to taggers and records are maintained regarding tag-number series assigned to the participants. This information is important for tracking down late tagged fish data reports for reported recaptures. Similarly, "Fish Recapture Reports" generated from the database are mailed to both the tagger and the angler reporting the recapture (along with the available reward item). This timely feedback loop is critical to the success of the tagging program.

Every tag clearly states that a "REWARD" is offered for reporting recaptures of tagged fishes. Appropriate

reward items (program caps, sun visors, t-shirts, fish pins, etc.) are mailed to anglers (and commercial fishers and fish dealers reporting tags) by the VSFT office along with fish Recapture Reports. The most popular reward item is the t-shirt, which must be printed in limited numbers each year to stay within budget. Typically, late in the fishing year the t-shirt supply becomes exhausted. Then other reward items are substituted for it (most reporters of recaptured fish understand such issues).

The majority of data for both tagged and recaptured fishes are entered into the database at the VSFT office; the data go directly into the database maintained on a server at the VMRC. The VMRC database manager is proactive in contributing to the improvement of tagged and recaptured fish data and outputs. Current options include setting up various reports that provide “single-click” data summaries for review and tracking program results.

VIMS continues to serve as a remote site for entering tagged and recaptured fishes data for selected program participants. To relieve some of the workload from the VSFT office, VIMS staff enter all data for the program’s most productive tagger, Mr. Ed Shepherd. From 2007-2014, Mr. Shepherd has tagged 2,000-10,000 fish annually, which resulted in 550-1000+ recapture reports each year.

At VIMS, tagged fish and recapture data records are also checked for possible inconsistencies and errors; the corrected data are then analyzed and formatted for various presentations and reports. Figures demonstrating fish movement and habitat use patterns are also developed for a variety of educational programs (VIMS Marine Science Day, kids fishing clinics, science teachers and public presentations). Data and graphics are also developed in different formats for various program dissemination needs, i.e. VIMS website pages, annual tagging training workshops, posters, annual reports and presentations (angling clubs, civic groups and scientific meetings). Tag and program equipment orders including the construction of fish measuring boards are handled by VIMS.

VIMS also periodically conducts tag retention field trials to evaluate whether changes might be warranted regarding the type of tag used for a specific species. Depending on the size range of fish, certain tags are more appropriate for small fish specimens (like the 2.5 in T-bar tag) versus large fish (plastic and stainless steel dart tags). For target species larger than 26-28 inches total length, the program recommends using a 6.25 in. stainless steel dart tag with wire core sheath.

Since 2008, select taggers have been testing dogleg dart tags (DD tags) and wide-anchor dart tags (DW tags) for improved retention in speckled trout and red drum. Tag retention studies continued in 2016 for these plastic dart tags to examine patterns of times at large (versus T-bar tags). Recapture rates and times at large are being examined to determine if distinctive patterns result from the DD and DW tags.

## 2016 ACCOMPLISHMENTS

### Tagging Effort and Recaptured Fish Results

Through 2016, the program's database included over 283,026 tag records and approximately 30,949 recapture records (Table 6). (\*Note: VGFTP data referenced here include summaries of fish tagged and recaptured in terms of the number of *fish* recaptured (Table 5) and the *cumulative* number of *recaptures*, including multiple recaptures of the same fish (Table 6).)

During 2016, 87 trained anglers tagged fish. In February, "Top Tagger" awards were presented in Hampton at Bass Pro Shops' Spring Fishing Classic seminar series. The Tagging Program is fortunate to have a consistent group of anglers dedicating volunteer effort into tagging considerable numbers of fish that result in useful recapture data. The 2016 top taggers were responsible for the majority of tagged and recaptured fish data last year. The good-natured competition for the annual awards encourages taggers to work at becoming more consistent in their tagging. By doing so, they have a chance at making the list of annual award winners for any given year.

Trained anglers' tagging accomplishments appear in Tables 1-3 by number of tagged fish. Fifty-six anglers tagged 25 or more fish during 2016, which accounted for about 98 percent of all fishes tagged in the year. This participation level is similar to 2015. These anglers' consistent efforts produce the majority of data on local and regional habitat use and movement patterns of target species.

Top ranking anglers by total recaptures during 2016 appear in Table 4. The majority (97%) of recaptures reported during the year were accounted for by the 31 taggers listed. As expected, anglers tagging the most fish often have the highest number of recaptures per year. Higher numbers of recaptures are associated with a number of variables including fishing (and tagging) frequently, organizing one's tags and data sheets to enhance tagging efficiency, and tagging at locations which hold individual fish for significant periods and which are fished frequently by other anglers.

The range of fishing/tagging areas covered by VGFTP taggers is important to keeping the program data relevant to target species dynamics including year-to-year abundance, habitat use and seasonal migration patterns. However, also important are a smaller number of taggers who routinely push themselves to even higher tagging goals (200-900+ fish per year). The teamwork and cumulative data resulting from taggers at each tagging effort level keep the program responsive to changes in Virginia's recreational fishery. Multiple recaptures of individual fish often occur at fishing piers or other sites that hold fish for extended periods (this is often the case with black sea bass, flounder, etc.). Multiple recaptures of black sea bass at fishing piers demonstrate that careful handling of undersized fish results in reasonable survival rates of the fish. Another positive result of successful releases is such fish often contribute in the future to another good day of fishing. However, especially at fishing piers, the practice also contributes to the referenced problem of some inaccurate reporting of tagged fish recaptures. Further, demand for recapture rewards at these sites can be challenging during certain periods of time and provide pressure in terms of maintaining stock and ensuring that the reported data are accurate. In the future, anglers requesting multiple rewards may need to be given a limited option of rewards in fairness to all program participants and to ensure consistent reward stock.

## 2016 Species Results

### **Black Drum:**

In 2016, 96 black drum were tagged, of which 37.5% (n=36) were adult fish (>16 inches TL). As in previous years, 2016 drum recaptures were low (n=5). The recapture rate in 2016 was approximately 5.2%. From 1995-2016, more than 4,140 black drum were tagged and 217 recaptures were reported (Tbls. 5, 6), for an overall recapture rate of 5.2%. The most popular tagging site in 2016 was the Monitor Merrimac Bridge Tunnel (n=26); this site made up 27% of tagging effort (Tbl. 7). This differs from 1995-2015, where the peak tagging site was Inner Middle Ground Shoal (13% of effort). Black drum recaptures were highest at the Yorktown Fishing Pier (n=2, 40% of effort, Tbl. 8). Historically, the York River Hot Ditch was the top recapture site (20% of recaptures, 1995-2015). Tagged black drum ranged from 7-49.5 inches TL with a peak tagging effort at 16 inches TL (n=8) (Fig. 1). Days at large for black drum ranged from 9 to 21 days for recaptures (*Note: recapture data in this report for days at large include recaptures of fish tagged in previous years*).

**Black Sea Bass:**

In 2016, 2,949 black sea bass were tagged. To better manage program resources, a minimum tagging size limit of 6.5 inches was implemented in 2010. Even with this size limit in place, black sea bass continued to have a high species recapture rate in 2016 at 36.5% (Tbl. 6).

Black sea bass long-term results (1997-2015) show more than 36,396 fish tags and 8,832 recapture records (overall recapture rate = 24.3%, Tbls. 5, 6). The top tagging site in 2016 was Fort Monroe Area/Pier which made up 83.5% of the tagging effort (Tbl. 9). Fort Monroe was also at the top of the list for tagging for black sea bass from 1997-2015. For recaptures, 96.4% took place at Fort Monroe (Tbl. 10), and Fort Monroe has been the top recapture site in the past (1997-2015). Tagged black sea bass ranged in size from 6-23.5 inches TL, with 6.5 inch fish at the peak (n=2,321) (Fig. 2). These results are similar to the overall program pattern seen from 1997-2015, when peak effort also occurred at 6 inches TL (n=6,953 tags). Days at large for black sea bass ranged from 0 to 348 days.

**Cobia:**

In 2016, 472 cobia were tagged, of which 94.5% were adult fish (>24 inches TL). The recapture rate for cobia was 13.1%.

The total number of cobia tags from 1995-2015 was 3,337, with 370 recaptures and ~11% recapture rate (Tbl. 6). The most popular tagging location in 2016 was the Baltimore Channel Buoy Line (23.4% of effort, Tbl. 11). From 1995-2015, the top tagging site was also the Baltimore Channel Buoy Line (16% of historical effort). In 2016, recaptures highest among four sites: the 36A Buoy, the Baltimore Channel Buoy Line, the CBBT, 4th Island and Windmill Point Light; each having 4 recaptures (Tbl. 12). Tagged cobia ranged in size from 9-61 inches TL, with 32 inches (n=30) being the peak length (Fig. 3). This is close to tagging size frequencies from 1995-2015, where peak effort occurred at 34 inches TL (n=148). Cobia recapture data for days at large ranged from 3 to 3,212 days and included fish that were tagged in 2007, 2010, and 2012 through 2016. The highest number of recaptures came from cobia that were tagged in 2015 (n=27).

**Flounder:**

In 2016, approximately 1,213 flounder were tagged and 218 were recaptured (Tbl. 5). From 2000-2015, 77,170 tags and 8,257 recaptures have been reported for flounder (Tbl. 6), with an overall recapture rate of 10.7%. The top tagging and recapture site in 2016 was the Fort Monroe Area/Pier making up 37% of tagging effort (Tbl. 13), and 52% of the recapture effort (Tbl. 14). Historically, the Gloucester Point Fishing Pier was the top tagging (15% of effort) and recapture location (n=1,537 recaptures) for summer flounder from 2000-2015. In 2016, tagged flounder varied in size from 8-20 inches TL, with the peak size for tagging at 12 inches TL (n=509) (Fig. 4). This peak could again be a reflection of the 12 inch minimum tagging size guidelines put in place in 2010. Days at large for flounder recaptures ranged from 0 to 765 days (including fish tagged 2014-2016).

**Red drum:**

From 1998-2016, >500 red drum have been tagged annually (except 2001: n=295). In 2016, 1,802 red drum were tagged and there were 95 recaptures (Tbl. 6). From 1995-2016, more than 58,174 red drum tags and 6,678 recapture records were reported for an overall recapture rate of 11.5% (Tbl. 6). The top tagging site in 2016 was Fort Monroe (27.6% of effort, Tbl. 15); with the Elizabeth River, Norfolk-Portsmouth waterfront as the top recapture site (Tbl. 16). From 1995-2015 the York River Hot Ditch was the top red drum tagging and recapture site (20% of tags and 18% of recaptures). In 2016, tagged red drum ranged in size from 7-54 inches TL, with the peak size for tagging at 15 inches TL (n=242) (Fig. 5) and 11.8% of tagged red drum were adults (n=212, >18 in. TL). Tagging effort at this size followed historical patterns 1995-2015 where effort peaked at 15 inches TL (n=3,350 tags). Days at large for recaptures of red drum ranged from 0 to 189 days.

**Sheepshead:**

In 2016, 20 sheepshead tags and no recaptures were reported (Tbl. 6). The top tagging site in

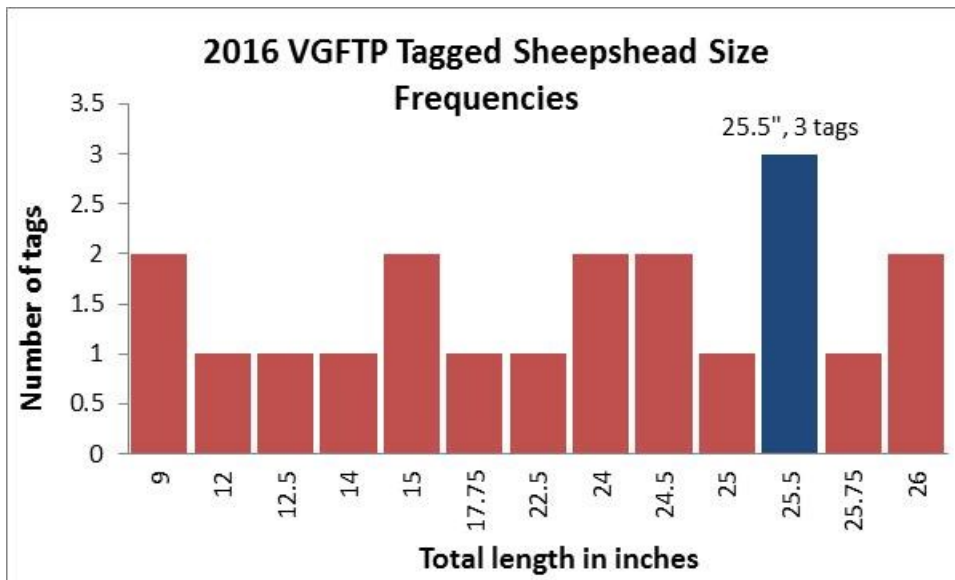

2016 was the Chesapeake Bay Bridge Tunnel (CBBT) 1st island, with 40% of total effort (Tbl. 17). This differs from 2000-2010 results, where the York River Hot Ditch was the top tagging location (35% of effort). In 2016, tagged sheepshead ranged in size from 9-26 inches TL. There was a slight peak in effort at 25.5 inches TL (n=3), but there was variation in effort across the size range (Fig. 6). This pattern differed from 2000-2015 size frequencies, where peak effort occurred at the 6 inch size class (n=89).

Tbl. 18 Spadefish Tagging Sites, 2016

**Spadefish:**

There were 131 spadefish tagged in 2016 and 7 recaptures (Tbl. 6). There were over 6,612 spadefish tags and 659 recaptures reported over the past 21 years, for an overall recapture rate of ~10% (Tbl. 6). The most popular tagging and recapture location in 2016 was CBBT 3rd Island (35.9% of tagging and 57.1% of recapture sites, Tbls. 18,19). This differed from 1995-2015 results as the Chesapeake Light Tower was the top tagging and recapture site (31% of tagging, 34% of recaptures). In 2016, tagged spadefish ranged in size from 4-14.5 inches TL with peak effort at 8 inches TL (n=20) (Fig. 7). All of the tagged spadefish were within the mature size range (>4 in. TL). Fish were at large from 2 to 365 days. All the recaptured fish were tagged in 2016 with the exception of one.

**Speckled trout:**

From 1995-2016, more than 74,821 speckled trout tags and 2,479 recaptures

were reported (3.3% overall recapture rate) (Tbl. 6). In 2016, there were 8,434 tags and 54 recaptures reported; Fort Monroe was the top tagging site (24% of top effort, Tbl. 20). In terms of recaptures the highest effort took place at Lynnhaven Inlet (n=6, Tbl. 21). Historically, the Elizabeth River Hot Ditch was the top tagging and recapture site for speckled trout from 1995-2015. In 2016, tagged speckled trout ranged in size from 6.5-26 inches TL, with a peak at 11 inches TL (n=1,318) (Fig. 8). Peak effort from 1995-2015 took place at the 11 inch size class (n=5,635). Fish recaptured in 2016 were at large from 0 to 87 days.

**Tautog:**

Through 2016, tagging effort on tautog in Virginia waters has resulted in more than 19,645 tags (Tbl. 6). From this effort, there have been 3,033 recaptures (Tbl. 6) with an overall recapture rate of 15.4%. In 2016 alone, there were 760 tags and 169 recaptures. The top tagging site in 2016 was the CBBT 1st island (12.4% of tags, Tbl. 22) and the top recapture site in 2016 was off Virginia Beach midshore waters (16% of recaptures, Tbl. 23). This differed from 1995-2015, when the Cape Henry Wreck was the top tagging and recapture site. In 2016, tagged tautog ranged in size from 6.5-28 inches TL, with the peak at 14 inches (n=84 tags) (Fig. 9). Peak effort from 1995-2010 also took place at a similar size class (13 inches, n=2,043 tags). Tautog recapture data for days at large ranged from 0 to 3,411 days (including fish tagged in 2006, and 2012-2016). A new VGFTP record for longest days at large was broken in 2016, when Mike Perron's tautog that had been tagged at the CBBT 1st island in November 2006, was recaptured in March 2016 at the Santore Wreck. The fish had been at large for 9.3 years and was tagged with a traditional T-bar tag.

**(Gray) Triggerfish:**

During 2016 there were 22 gray triggerfish tagged, and 6 recaptures (Tbls. 5, 6).

There were over 1,392 triggerfish tags and 339 recaptures from 2001-2016 (Tbl. 6). Triggerfish had a high historical recapture rate of 24.4%. The top tagging location in 2016 was the CBBT 4th island (27.3% of effort, Tbl. 24). In previous years (2001-2010), False Cape was the top tagging site, (19% of effort). There were only two triggerfish recapture sites in 2016; with 4 recaptures at the 4th island of the Chesapeake Bay Bridge Tunnel and two at Broad Bay (Tbl. 25). Tagged triggerfish ranged in size from 8.5-15 inches TL, with the peak effort at 11.5 inches (n=6) (Fig. 10). Peak effort from 2001-2015 took place at the 13 inch TL size class (n=133 tags). Days at large ranged from 5 to 34 days.

## CONCLUSION

In 2016, the Tagging Program had a 24% increase in the overall tagging effort (n=15,899 tags) and a 2.6% increase in recaptures (n=1,592) from the previous year (Table 6). Species with an increase in tagging included black sea bass (n=2,949 tags, n=1,076 recaptures); cobia (n=472 tags, 62 recaptures); red drum (n=1,802 tags, 95 recaptures); speckled trout (n=8,434 tags, 54 recaptures) and tautog (n=760 tags, 169 recaptures) (Table 6). Species that had lower tagging numbers in 2016 included black drum (n=96 tags, 5 recaptures), flounder (n=1,213 tags, n=118 recaptures), sheepshead (n=20 tags, 0 recaptures); spadefish (n=131 tags, 7 recaptures); and triggerfish (n=22 tags, 6 recaptures; Table 6).

In conclusion, 2016 saw an increase in tagging and recapture levels, the first increase in four years. Speckled trout led again as the top tagged species, making up 53% of tagging effort in 2016. Results for each target species are being reviewed and the data edited regarding questionable recapture data. These data provided fish movement and site-fidelity patterns of fish captured and released in Chesapeake Bay and Atlantic coastal waters. VGFTP data have also provided an important source of information for marine fisheries management. In the past 21 years, more than 500 taggers have been trained and participated in the program and fishing effort has been documented at over 900 locations in Virginia waters.

Figure data in this report are accurate as of May 5, 2017. Future analysis of long-term trends in the VGFTP data will continue with the most recent results available online: <http://www.vims.edu/vgftp/>. This report is considered a “living” document with updated versions posted at the website above.

Recap																						

This report accounts for double tagging and counts the number of **fish** that were tagged and not the number of tags. Double tag info is valid for 2008 and after. For recaptures, this report counts the number of fish recaptured and does **not** count multiple recaptures of the same fish. The first column under each species is the number of recaptured fish and the second column is the number of tagged fish.

\*This table also includes 190 cobia and 199 spadefish that were tagged as part of a special cooperative study with the Virginia Tech Virginia Seafood Agriculture Research and Extension Center in 2012.

## 2016 Tag Recaptures by Species

1. Multiple recaptures are distinguished **in bold** for individual fish by the records having IDENTICAL Tag Numbers and Tag Dates.
2. Multiple recaptures are listed in sequential order, with the most recent recapture listed last on the Tag Number column. Multiple recaptures often document the location of the fish over two different or distinct times. However, two (or more) recaptures of the same tagged fish can occur on the same day and even the same location. These types of events document good tagging and release survival rates for the species.
3. Multiple recapture data provide especially valuable information. This information can only be recorded when anglers write down and report the tag number as soon as possible, then release the fish with the tag still in place.
