## PREFACE

There is a shortage of economic data about west coast fisheries and widespread concern that fishery management measures are being proposed and implemented without adequate information about how fishing and seafood industries are affected or how they will respond. There is also a great deal of concern expressed by industry and government leaders about the potential indirect and induced economic impacts of fishery management decisions.

This report contains fundamental economic statistics related to California fisheries and seafood markets. Statistics are presented in a format that facilitates the analysis of individual fisheries and can be used to show how changes in fisheries and fish markets affect California fishermen and seafood processors and other segments of the California economy. The report contains production, cost and market data and Employment, Income and Output multipliers for 20 California-based fishing fleets and 9 California-based fish processing activities. Information is also presented to show how California fishing industries are linked through their purchases and sales with the rest of the California economy.

All of the data and analysis presented in this report were developed from the results of an economic survey of California fisheries conducted during 1981-1982 by the California Sea Grant College Program (CSG). The survey was conducted in cooperation with the Pacific Coast Federation of Fishermen's Associations

(PCFFA) which helped coordinate the survey of fish harvesters, and the California Seafood Institute (CSI) which helped coordinate the survey of fish processors.<sup>1</sup> Data were collected for calendar year 1980, but the numerical data presented here<sup>2</sup> have been updated to show conditions during calendar year 1982. The report has three sections.

#### Section I - Vessel Operation and Financial Performance Data

This section contains vessel operating data and summary statistics showing fixed and operating costs, revenues, revenue sources and fleet characteristics for twenty separate California fishing fleets. Data presented in this section are useful to researchers concerned with fish harvesting and the costs, revenues, and operating procedures of various California fishing fleets. Data are presented with sufficient detail to allow the analysis of individual fleets or "typical" vessels within fleets without violating the relatively strict confidentiality agreements between Sea Grant and cooperating fishermen's organizations.

#### Section II - The 1982 California Interindustry Fisheries (CIF) Model (An Input-Output Model of California Fisheries)

This updated version of the 1980 CIF model is fully documented with references for all primary survey data and secondary sources used to construct the model. It contains a 68 Sector Transactions table and Technical Coefficients table and instructions for interpreting input-output data.

---

<sup>1</sup>  
PCFFA and CSI contributed by identifying industrial activities and aggregating them into fish harvesting and processing sectors and by arranging interviews with industry specialists and administering mail surveys. Additional assistance was provided by the California Sea Grant Industry Advisory Committee and the NMFS Southwest Fisheries Center.

<sup>2</sup>  
Preliminary results from that survey were made available during 1982 in two papers: Sea Grant Working Paper P-T-5, "The California Interindustry Fisheries Model," and Sea Grant Working Paper P-T-6, "An Economic Impact Calculator for California Fisheries."

### Section III - Employment, Income, and Output Multipliers for California Fish Harvesters and Processors

This section contains Type 1 and Type 2 economic multipliers for each of the twenty California fish harvesting sectors and nine California fish processing sectors included in the study. The multipliers presented in this section are the most often cited results from input-output studies. Type 1 and Type 2 multipliers are presented for each fish harvesting and fish processing sector along with estimated values of the jobs, household incomes, and sales generated in California per dollar increase in exvessel or processed fish sales.

## INTRODUCTION

### Background

The economic survey of California fisheries was undertaken by Sea Grant during 1981/1982 at the request of industry organizations representing California fishermen and seafood processors. Sea Grant researchers and industry leaders recognized the need for more reliable economic information about California fisheries and cooperated in designing and implementing a broad reaching economic survey of California's fisheries. The cooperative effort resulted in an exceptionally thorough and reliable set of economic data that can be used to evaluate the financial performance and economic impacts of California's commercial fisheries.

Sea Grant researchers involved in the project were primarily interested in the economic data-bases that would result from the survey which had many useful applications. Industry leaders were interested primarily in the results of an interindustry analysis of survey data which generated economic "multipliers" and showed how California fishing and seafood processing industries generate benefits throughout the California economy. With the interests of both participating groups and a variety of potential users in mind, the 1981/82 Sea Grant project had two primary goals:

- 1) To develop an economic data base that could be used to improve empirical studies of California fisheries
- 2) To develop a mathematical model showing economic interdependencies associated with California fisheries which could be used to describe how policies affecting California fishermen and seafood processors affect overall economic conditions in the state.

## General Approach

Economic data were collected from government and industry sources to develop profiles of purchases and sales by 20 separate Fish Harvesting Sectors and nine separate Fish Processing Sectors. For developing economic "multipliers" all other industrial activities in the state of California were aggregated into 35 Non-Fishery Sectors.

Data for the fish harvesting and fish processing sectors came primarily from three sources: a review of previous economic studies, a mail survey of harvestors and processors (100% coverage) and extensive face-to-face interviews with "subject area specialists" for each harvesting and processing sector.

Data for non-fishery sectors are based primarily on a 398 sector "input-output model" of the 1980 California economy which was developed during 1981 by the U.S. Dept. of Interior.

## The Survey of Fish Harvesters

The vessel operating statistics and cost and revenue data presented in Section I are based primarily on the Sea Grant mail survey of fish harvesters.<sup>3</sup> The sampling universe for the survey is approximately 3800 commercial fishing vessels and the mail survey was aimed at a 100% sample. The initial mailing was sent with a cover letter from the Pacific Coast Federation of

-----  
3

The CIF model presented in Section II shows purchases and sales within the California economy. In that model all transactions with firms or households located outside California are treated as imports/exports. To provide a full accounting of production and cost relationships, the purchase and sales data presented in Section I include all costs, landings and sales inside and outside California.

Fishermen's Associations (PCFFA) and a three page survey instrument which are both presented in Appendix A-1. A mailing was sent with a prepaid return envelope to the owners of 3200 California-based commercial fishing vessels with carrying capacities over 5 tons (registered with the U.S. Coast Guard) and an additional 350 commercial fishing vessels with carrying capacities less than 5 tons (not registered with the U.S. Coast Guard). The owners of the smaller vessels were identified from membership lists of cooperating industry organizations.<sup>4</sup>

With the help of PCFFA, the survey effort was publicized at industry organization meetings and in industry newsletters and coastal newspapers during the winter of 1980-81 and the initial mailing was sent to owners of 3550 vessels in mid-March, 1981 (corresponding with 1980 tax preparation time). A follow-up letter and a second survey instrument was mailed in early May and since all responses to the initial mailing were returned anonymously to PCFFA offices this follow-up mailing had to be sent to the entire fleet list including those who had already responded. The PCFFA cover letter included in the follow-up mailing thanked

---

<sup>4</sup> U.S. Coast Guard records document all commercial vessels over 5 GRT (gross registered tonnage). On December 31, 1979, this list included 3200 commercial fishing vessels and all of those were sampled. Most of the commercial fishing vessels less than 5 GRT which were not included on the Coast Guard list were small trollers, gillnetters, hook and line boats, harpoon boats and diveboats. Cooperating fishermen groups provided what were thought to be complete lists of these vessels but our final sample list of 3550 vessels was less than the 3800 California commercial fishing vessels estimated by NMFS. The 250 vessel discrepancy has not been reconciled, but any vessels not included in the CIF mail survey are assumed to be small relatively unproductive vessels from CIF Sectors 6, 8, 13, 29 and 20.

those who had responded and encouraged non-respondents to cooperate by filling in the survey instrument and returning it.

The overall response from the survey of fish harvesters was 18% with 13-15% apparently responding to the first mailing and 3-5% apparently responding to the follow-up mailing. Of the 652 returns, 564 contained usable data.

Cooperating industry organizations identified two "subject area specialists" for each major California fishing fleet who were interviewed by Sea Grant researchers during January-June, 1981. These fishing and fish market experts provided "subjective" estimates of costs, sales, etc. for various vessel-types and offered their own estimates of market linkages, trade channels, etc. In June, after the results of the mail survey and the interview process had been tallied, eight of these industry experts and Sea Grant researchers attended a two-day data review session at PCFFA headquarters in Sausalito, California. The purpose of the review session was to reconcile differences in the distributions of vessel costs, revenues and markets from the various sources before the development of the economic data-base

---

5

Most respondents provided useful data in all categories (vessel characteristics, vessel costs, species caught, market distribution) and some provided useful data in some, but not all areas. The 88 returns that were not included as observations in any of the CIF data-bases were those that contained garbled or inconsistent data that could not be reconciled by researchers or industry advisors.

and final specification of the analytical (input-output) model. <sup>6</sup>

In general, researchers and industry representatives at the data review sessions were satisfied with the results of the mail survey. The data-base developed from the mail survey was more thorough and more current than what was available from secondary sources and interpretations of mail survey data were consistent with the impressions of subject area specialists. The production, cost and sales data presented in Section I and the economic data-base used in the fishery portion of the analytical model described in Section II came almost exclusively from the mail survey. <sup>7</sup>

#### Survey of Fish Processors

The sampling universe of California fish buyers and processors was taken from a list of 760 California-based firms with licenses from the California Department of Fish and Game to buy fresh fish for resale. This group includes bait shops, aquaculture firms, and zoos as well as the fish processors, wholesalers, and restaurants that were the prime target of the survey but the available list of licensees offered no criteria

-----  
<sup>6</sup>

This data review workshop was not part of the original plan for the 1981 Sea Grant Project. Funds to cover organization expenses and travel costs for workshop participants were provided by the National Marine Fisheries Service, Southwest Regional Center under a separate grant.

<sup>7</sup>

Through related studies, Sea Grant researchers acquired some detailed economic data related to tuna and wetfish purse-seining and these were used to specify input-output coefficients for sectors 4 and 5. All other data presented for California fish harvesters originated with the 1981 mail survey.

for distinguishing firms by resale function. Recognizing that some oversampling would occur, the decision was made to contact all firms on the list and in early March, 1981, a mailing went to each of the 760 licensees. The mailing included a cover letter from the California Seafood Institute (CSI) and a survey instrument which are both shown in Appendix A-2.

Because many of the firms receiving the survey instrument were not processing for human consumption and did not purchase significant quantities of fish, the percentage of useful respondents was predictably low. A month after the follow-up mailing which was sent on April 15, 64 survey instruments had been returned, a response rate of only 9%. Based on sales figures presented by respondents and information from CSI, however, the firms that did respond appear to account for 70-80% of non-tuna exvessel fish purchases in the state of California.

#### The CIF Model

Input-output models and "interindustry" analysis are described thoroughly in several good economic text books and the technical aspects of the model developed for this project are described in Sea Grant Technical Report P-T-5.<sup>8</sup> The fishery-related "input-output" model which was developed for this project has been called the California Interindustry Fisheries (CIF)

-----  
8

For a complete discussion of Input-Output analysis, see "The Elements of Input-Output Analysis" by W.H. Miernyk, Random House, New York, 1965 or "Input-Output and Regional Economics" by H.W. Richardson, Weidenfeld and Nicholson, London, 1972. The 1981 Sea Grant report describing the CIF model is available from the Publications Office of California Sea Grant, A-032, La Jolla, California 92093.

Model. It is based on economic data from the survey of fish harvesters and processors and the 398 sector input-output model of the 1980 California economy constructed by the U.S. Dept. of Interior (U.S. Forest Service). The California model was developed from the most recent Dept. of Commerce input-output model of the U.S. economy (1972) and the most recent California census data from the U.S. Bureau of the Census (1979).<sup>9</sup> The original Department of Interior model contained only four fisheries sectors (fishing, tuna canning, other fish canning and other fish packing) which were replaced for our purposes with 20 fish harvesting sectors and 9 fish processing sectors to develop the CIF model. The remaining 385 non-fishery industrial sectors of the Department of Interior were then aggregated into 35 broader industrial categories using Standard Industrial Classification (SIC) procedures.<sup>10</sup> The 64 industrial sectors and 2 primary sectors of the CIF model and the results of the input-output analysis are described in Section II and economic "multipliers" based on the input-output analysis are described in

-----  
9

The 1972 national input-output model was published by the Dept. of Commerce in April of 1981 and the 1977 California census data were published in March of 1981. The California state model was developed from the national model using RIMS (Regional Impact Multiplier System) developed by the U.S. Department of Commerce (See Sea Grant Technical Report P-T-6.)

10

The "Standard Industrial Classification Manual" is published every 5-7 years by the U.S. Dept. of Commerce. It contains descriptions of U.S. industries and aggregates industrial activities into 4 digit, 3 digit and 2 digit SIC's and broad industrial divisions. The nonfishery sections of the CIF model are based on the 1977 SIC Manual and define sectors to around 2 digit SIC codes.

Section III.

SECTION I

VESSEL AND FLEETWIDE  
COST AND REVENUE DATA

SECTION I  
VESSEL OPERATING AND  
FLEET-WIDE COST AND REVENUE DATA

This section contains 1982 cost, landings and revenue statistics for each of the 20 California fish harvesting sectors. (See Table 2-1.) These 1982 figures reflect 1980 survey results adjusted to account for input and product price changes to 1982. No adjustments have been made here to account for changes in the abundance or availability of various species of fish between 1980 and 1982 so estimates for each sector reflect production technologies and catch rates for 1980 at 1982 input and exvessel fish prices.

PART I of each data sheet describes the fleet in terms of the criteria used to aggregate survey responses. (See Appendix B-2.) The 20 fish harvesting sectors are mutually exclusive and information presented here summarizes how survey responses were grouped on the basis of primary and secondary gear, home port and catch information.

PART II provides summary statistics about vessel revenues and the source of vessel revenues for sample vessels in each fleet class. The sub-sample of vessels in each sector reporting at least some catch of each species is reported (column 1) and vessel revenues from landings of each species are reported as an average for the entire sample (column 4) and for those vessels reporting at least some catches (column 5). The contribution of each species to the revenues of all sample vessels can be compared to the contribution of each species to the revenues of sample vessels that appear to have fished for that species. The minimum and maximum contribution of each species to vessel revenues (columns 8 and 9) are based on sample vessels reporting at least some catches of species listed along the row.

PART III provides summary statistics about fixed and operating costs reported by sample vessels in each fleet class. The sub-sample of vessels reporting at least some costs in each category are shown (column 10) along with the dollar expenses reported in each category by all sample vessels (column 11). Average vessel costs based on all sample vessels (column 13) and based only on vessels reporting at least some costs in each category (column 14) are shown along with the minimum and maximum shares of total expenses by category (column 17 and 18).

GROUND FISH TRAWLERS, NORTH  
(n = 13)

SECTION II

THE 1982 CALIFORNIA INTERINDUSTRY FISHERIES  
(CIF) MODEL

## SECTION II

### THE 1982 CALIFORNIA INTERINDUSTRY FISHERIES MODEL

#### Model Specifications

The 1982 CIF model contains 64 industrial sectors, including 20 fish harvesting sectors, 9 fish processing sectors, and 35 non-fishery sectors. A list of these industrial sectors is presented as Table 2-1.

The column entries for the Household Sector (Sector 65) show all payments made to California households by each industrial sector including wages, salaries, rents or profits and the row entry for Sector 65 shows all wholesale or retail sales made directly to California households by each industrial sector.

The import/export sector (Sector 66) accounts for all transactions between California-based firms in each industrial sector and all firms and households located outside California. Imports are shown as column entries (Sector 66) and exports are shown as row entries (Sector 66).<sup>11</sup>

#### SPECIAL CATCH-EFFORT RELATIONSHIPS

Input-output models are based on the assumption that the quantities of each input required in a production process change proportionately with changes in output quantities. A 10%

-----  
11

In input-output analysis it is convenient to treat returns to capital and management as payments to households in the same sense that salaries, wages and rents are payments to households. For this reason, the Total Purchases by each industrial sector shown in the last row of the Transactions Table is identical to the Total Sales shown in the last column.

increase in sales by a given industrial sector, for example, is assumed to cause a 10% increase in purchases of all inputs by that industrial sector. Commercial fisheries, however, are a somewhat special case because fishermen are engaged in a unique type of search and capture activity. The use of inputs by a given fishing fleet is related to fishing time (or fishing effort) and in fisheries input-output relationships as reflected in catch per unit fishing effort statistics depend primarily on the abundance and/or availability of fish and the skills, intentions and luck of fishermen.

Procedures to test the stability of input-output relationships under changing biological, economic and regulatory conditions and methods to update the technical coefficients of the CIF model are discussed in Sea Grant Technical Report P-T-10. It should be noted here, however, that the stability of coefficients depends primarily on whether observed or estimated changes in outputs (catches) result from changes in the application of inputs (fishing effort) or changes in the condition of the fishery (catch per unit fishing effort).<sup>12</sup>

-----  
12

An increase in the catch by a given fishing fleet may result from an increase in the abundance/availability of fish and no change in fishing effort or from an increase in fishing effort and no change in the abundance/availability of fish. In the first case, the increase in revenues to fishermen should enter the CIF model as increased payments to Households in the form of increased fishermen's profits. In the second case, the increase in revenues should be associated with a proportionate increase in the purchase of all inputs and a proportionate increase in payments to Households in the form of fishermen's profits. The need to adjust transactions data and technical coefficients to account for changes in the availability of a free input is unusual and required special treatment (See Sea Grant Technical Report P-T-10).

## SPECIES "MAKE" AND "USE" TABLES

All input-output models are based on estimates of dollar transactions between industrial sectors and sales to Households. To develop the CIF model, detailed transactions data were collected to estimate the dollar value of sales by each fish harvesting sector (Sectors 1-20) to each fish processing sector (Sectors 21-30). One option for collecting this kind of data was to ask fishermen the dollar value of their sales to various types of fish processors and/or to ask fish processors the dollar value of their purchases from various fishing fleets. A second option was to ask fish harvesters what products (species) they produce and where they sell various products and/or to ask processors what products (species) they buy and where they buy various products. This roundabout method of determining interindustry transactions is promoted by the U.S. Department of Commerce which used it to develop the most recent national input-output table. This method of developing a product "make" table and a product "use" table results in more reliable transactions data when firms are engaged in multiproduct enterprise.

It can be seen from the survey instruments (Appendix A-1 and A-2) that a "make" and "use" approach was taken to estimate transactions between California fish harvesters and fish processors. Information was requested about the range of products sold by various harvesting sectors and the range of products purchased by various processors and the dollar transactions between harvesters and processors were estimated on the basis "proportionality." If survey results showed, for instance,

that a particular fish harvesting sector accounted for 10% of California landings of a given species of fish, processors were assumed to make 10% of their in-state purchases of that species from that harvesting sector and so on.

A product "make" table showing the dollar value of each species group that was produced and sold by each harvesting sector and a product "use" table showing the dollar value of each species group was purchased and used by each processing sector are presented as Tables 2-2 and 2-3. The combination of data from both tables was used to estimate dollar transactions between California fish harvesters and fish processors, but Tables 2-2 and 2-3 are useful apart from the input-output analysis.<sup>13</sup> Dollar values in these tables can be adjusted quite simply to account for changes in the product mix decision of fishermen, regulatory changes, and other factors that affect the species composition of landings by various California fleets.

#### Input-Output Tables

Input-output (I-0) tables are vastly underutilized as sources of cost and market data. Once "multipliers" are generated through I-0 analysis the information contained in the I-0 tables themselves are frequently forgotten until they are needed to update "multipliers." In this section the Transactions

-----  
13

The matrix showing the dollar transactions between California fish harvesters and fish processors is a 20 x 9 matrix developed from manipulating the "make" table (20 x 13) and the "use" table (13 x 9). It appears in the CIF transactions Table (Table 2-4, Rows 1-20, Columns 21-29).

table and Technical Coefficients table of the CIF model are presented in their entirety. The fundamental value of each of these tables is summarized below.

#### The CIF Transactions Table (Table 2-4)

Table 2-4 shows the estimated dollar value of 1982 transactions among California fish harvesters, fish processors and non-fishery industries.

Reading across the row for a given sector shows the dollar value of sales by the row sector to each other California sector (columns 1-65), sales to California households (column 66), and sales to firms and households outside California (column 67). The last value in each row (column 68) shows the total dollar sales by firms in the row sector during 1982.

Reading down the column for a given sector shows the purchases by the column sector from all other industrial sectors (rows 1-64), purchases from California households (row 65) and purchases from firms and households outside California (row 66). The second to last entry in each column (row 67), shows total costs for each sector which is the same as the total sales value shown for that sector in column 67. The last entry in each column is a residual.

Each row of Table 2-4 provides an overview of the market distribution, level of wholesale and retail sales, and export activities by fishery and non-fishery sectors of the CIF model. Each column of Table 2-4 provides an overview of the inputs used by various fishery and non-fishery sectors of the CIF model and shows whether they are purchased inside or outside of California.

#### The CIF Technical Coefficients Table (Table 2-5)

Table 2-5 shows the dollar value of purchases by each column sector from each of the row sectors per dollar of direct sales by the column sector.

Reading down the column shows the fraction of each dollar spent by firms in the column sector that involves direct purchases from firms in each row sector. The coefficient of .11898215 in row 34, column 9 for example, shows that every dollar worth of sales by large California salmon trollers (Sector 9) requires approximately \$.1189 worth of direct purchases from California shipyards and boatyards (Sector 34).<sup>14</sup>

---

14

Because coefficients are calculated on the basis of purchases per unit sales by a particular sector, reading or summarizing coefficients across rows is not useful.

TABLE 2-1

SECTORS OF THE 1982  
CALIFORNIA INTERINDUSTRY FISHERIES MODEL

Fish Harvesting Sectors (1-20)

Sector Number	Title	Sector Number	Title
1	Groundfish Trawlers, North	11	Salmon-Albacore
2	Groundfish Trawlers, South	12	Long-Liners
3	Shrimp Trawlers	13	Hook & Line
4	Tuna Purse-Seiners	14	Black Cod Pots
5	Wetfish Seiners	15	Crab/Lobster, North
6	Herring Gillnetters	16	Crab/Lobster, South

SECTION III

OUTPUT, INCOME AND EMPLOYMENT MULTIPLIERS

FOR

CALIFORNIA FISH HARVESTERS

CALIFORNIA FISH PROCESSORS

### SECTION III

#### OUTPUT, INCOME AND EMPLOYMENT MULTIPLIERS FOR CALIFORNIA FISH HARVESTERS AND FISH PROCESSORS

##### Background

Firms in every industry are linked through their purchases and sales with firms in other industries and with households. As a result changes in sales by firms in one industrial sector have indirect and induced impacts on sales by firms in other industrial sectors and generate "ripples" of economic change that spread throughout the economy. Input-output models, such as the CIF model, can be used to simulate how changing sales in one industrial sector filter through the economy. They provide the only reliable method of tracing indirect and induced economic impacts and generating economic "multipliers." The "multipliers" generated from the CIF model show the indirect and induced impacts on jobs, incomes, and overall level of economic activity that result from direct changes in exvessel sales by California fish harvesters or processed fish sales by California fish processors.

##### Type I and Type II Multipliers

In the economics literature, it is customary to show "multipliers" that reflect the overall change in a variable per unit of direct change in that variable. Employment multipliers, for instance, show the overall increase in the number of jobs per direct job generated in a given industry and output multipliers show the overall dollar sales generated per dollar of direct

sales in a given industry. Impacts that result from increases in interindustry transactions are usually referred to as "indirect" impacts and multipliers that show "indirect" impacts are usually referred to as TYPE I multipliers. Additional impacts sometimes result because increases in interindustry trade cause increases in household incomes and corresponding increases in household spending that generate additional rounds of economic activity. These impacts that result from increases in household spending are usually referred to as "induced" impacts and multipliers that show "indirect" impacts from interindustry transactions and "induced" impacts from increased household expenditures are usually called TYPE II multipliers. TYPE I and TYPE II output, income, and employment multipliers generated by the 1982 CIF model are presented for each fish harvesting sector in Tables 3-1, 3-2 and 3-3, and for each fish processing sector in Tables 3-4, 3-5 and 3-6.

#### Other Multipliers

Since input-output models are based on assumed proportionality between inputs and outputs, it is possible to convert all multipliers to a common term and present them in terms of dollar sales. The Type I and Type II multipliers described above are the ones most frequently referred to by economists, but many users find it more convenient to have sets of multipliers that show the indirect and induced employment, output, and household income generated per dollar of direct exvessel or processed fish. These are presented in the appropriate tables along with TYPE I and TYPE II multipliers. A

user's guide to CIF multipliers with instructions and examples for applying them in policy analysis is available as Sea Grant Technical Report 83-1 and an abbreviated version is provided here as Appendix C.

24)	Fish Imp/Exp, Brokers	2.50	6.67	10.28	2.66802	4.11073
25)	Tuna Cannery	10.20	20.37	31.78	1.99685	3.11609
26)	Seafood Restaurants	54.00	63.58	77.21	1.17750	1.42983
27)	Other Eat & Drink	54.20	63.91	72.55	1.18352	1.34359
28)	Seafood Markets	15.20	39.11	47.89	2.57272	3.15033
29)	Other Food & Kindred Prod	29.02	44.35	54.93	1.78112	2.20593

Legend:

- D - Direct Employment Created per Million Dollar Sales
- I - Indirect Employment Created per Million Dollar Sales
- IN - Induced Employment Created per Million Dollar Sales

Type I Multiplier -  $(D+I)/D$ , i.e., direct and indirect jobs created per direct job in fish processing.

Type II Multiplier -  $(D+I+IN)/D$ , i.e. direct, indirect and induced jobs created per direct job in fish processing.

APPENDIX A

A-1 COVER LETTER FOR SURVEY OF CALIFORNIA FISH HARVESTERS

A-2 SURVEY INSTRUMENT FOR CALIFORNIA FISH HARVESTERS

A-3 SURVEY INSTRUMENT FOR CALIFORNIA FISH PROCESSORS

APPENDIX A-1  
COVER LETTER FOR SURVEY OF CALIFORNIA FISH HARVESTERS

**PACIFIC COAST FEDERATION OF FISHERMEN'S  
ASSOCIATIONS, INCORPORATED**

3000 BRIDGEWAY BUILDING, SUITE 104 • (415) 332-5080  
P.O. BOX 1626, SAUSALITO, CA 94965, USA

March 3, 1981

Dear Friend,

We all know how important California's fisheries are to us and we know that they affect the well-being of countless others around the State. At the present time, however, there is no method for us to describe how income, jobs, taxes, and wealth are generated throughout California by fishing activities. This lack of evidence hurts all of us in our attempts to lobby and protect our industry against needless interference.

For this reason, the Pacific Coast Federation of Fishermen's Associations (PCFFA) and other fishery-related trade organizations asked the University of California to study the "rippling effects" and "multipliers" associated with economic activity generated by our fishing activities. The study is being conducted by San Diego State University (SDSU) with Sea Grant funds. PCFFA is assisting SDSU by 1) mailing the enclosed questionnaire to commercial fishermen in California and 2) encouraging members of our industry to answer the questions as best they can and then return the questionnaire promptly in the enclosed self-addressed envelope.

SDSU researchers do not need to know your name or the name of your vessel and all responses will be averaged with others before they are used. PCFFA has required that all questionnaires be mailed back anonymously, and will insure that they are destroyed once summary statistics are calculated.

We recognize that 1980 was an unusual year for California fishermen, and adjustments will be made to account for irregularities. Please provide any specific comments you may have about the difference between the 1980 fishing season and other years; a space has been provided on the questionnaire for this vital input.

We also realize that some of your valuable time will be required to answer these questions; however, without this study there is no way for us to show Federal, State, and local governments that policies affecting us have impacts throughout the California economy. By promptly returning the enclosed questionnaire, you will contribute essential data for accomplishing this purpose.

Your individual response will never be known, but your cooperation will be appreciated and will help us all in many ways.

Sincerely,

Zeke Grader  
Pacific Coast Federation of  
Fishermen's Associations

APPENDIX A-2  
SURVEY INSTRUMENT FOR CALIFORNIA FISH HARVESTERS

QUESTIONNAIRE INSTRUCTIONS

This questionnaire asks for information about your catches and expenses. The questions are self-explanatory and answers which supply the greatest detail possible would be appreciated.

If you own or operate more than one vessel and they are similar, you may pool information. If they are not similar, please telephone collect to Dr. Dennis King at 714/265-6335 or Dr. Kenneth Shellhammer at 714/239-0888 to ask for additional questionnaires. If you have any questions at all about the questionnaire or the overall study, please do not hesitate to telephone collect to Dr. King or Dr. Shellhammer at the above numbers. Your prompt response will help a great deal.

Please indicate the number of vessels for which you are supplying data below. \_\_\_\_\_

QUESTIONNAIRE FOR SEAFOOD HARVESTERS

1) Did you fish full time or part time during 1980? CHECK ONE ONLY:  
 Full time  
 Part time  
 No fishing

2) Did you fish full time or part time during 1979? CHECK ONE ONLY:  
 Full time  
 Part time  
 No fishing

If you did not fish at all during either 1979 or 1980, please leave the remaining questions blank and return the questionnaire to us.

If you fished in 1979 but not in 1980, please complete the questionnaire using your 1979 figures.

If you fished in both 1979 and 1980, we request that you give us your 1980 figures. We realize that 1980 was not a normal fishing year and will adjust the data provided to account for this fact. Please assist us in making the proper adjustments by explaining how 1979 and/or 1980 differed from previous years when you operated the same business.

3) What size vessel do you operate? (Note each if more than one.)

_____ tons	_____ feet in length
_____ tons	_____ feet in length
_____ tons	_____ feet in length
_____ tons	_____ feet in length

4) What was your <u>principal</u> gear? (check one only) <input type="checkbox"/> Seine <input type="checkbox"/> Pots/traps <input type="checkbox"/> Trawl <input type="checkbox"/> Scuba <input type="checkbox"/> Troll <input type="checkbox"/> Other (Specify: _____) <input type="checkbox"/> Gillnet	5) What was your <u>secondary</u> gear? (check one only) <input type="checkbox"/> Seine <input type="checkbox"/> Pots/traps <input type="checkbox"/> Trawl <input type="checkbox"/> Scuba <input type="checkbox"/> Troll <input type="checkbox"/> Other (Specify: _____) <input type="checkbox"/> Gillnet <input type="checkbox"/> No secondary gear

REMINDER: THIS IS AN ANONYMOUS QUESTIONNAIRE. PLEASE DO NOT SIGN.

APPENDIX A-3  
SURVEY INSTRUMENT FOR CALIFORNIA FISH PROCESSORS

QUESTIONNAIRE INSTRUCTIONS

This questionnaire asks for information about the economics of your business and we urge you to provide as much detail as possible. Questions refer to business operations during 1980; but if you prefer to give information about other years, please specify which year you are using.

We have assumed that your business falls into one of the industrial sectors listed in Question 1 below. If you operate more than one business in one or more of these sectors, please telephone collect to Dr. Dennis M. King at 714/263-6335 or Dr. Kenneth L. Shellhammer at 714/239-0888 for additional instructions. Also, if you have any questions at all about the questionnaire or the overall study please do not hesitate to telephone collect to either Dr. King or Dr. Shellhammer.

QUESTIONNAIRE FOR SEAFOOD PROCESSORS/DISTRIBUTORS

1) What is the primary nature of your business?  
(CHECK ONE ONLY:)

- Distributor, Wholesaler, Processor
- Broker, Import/Export Business
- Restaurant -- Seafood Specialty House
- Restaurant -- Other (with California Fish and Game, Fish License)
- Seafood Markets (specializing in fresh, semi-processed, or processed fish)
- Non-Seafood Markets (supermarket chains, small variety stores, etc.)
- Cannery (tuna, salmon, sport-fish, etc.)
- Other Businesses, specify by circling (smokers, specialty packers, bait shops, worm farms, fish farms, other)

2) For what year are you supplying the data? \_\_\_\_\_

3) SALES: Please indicate in the first column below what percentage of your sales were made to each of the types of customer listed. In the second column, indicate what percentage of those sales were made to California-based firms or California residents.

<u>Type of Customer</u>	<u>Percent of Total Sales</u>	<u>California-Based Firms or Individuals</u>
Consumers	_____ %	_____ %
Hospitals	_____ %	_____ %
Military Institutions	_____ %	_____ %
Prisons	_____ %	_____ %
Other Institutions (specify: _____)	_____ %	_____ %
Retail Fish Markets	_____ %	_____ %
Other Retail Markets	_____ %	_____ %
Fish Restaurants	_____ %	_____ %
Other Restaurants	_____ %	_____ %
Other Handlers (distributors, wholesalers, processors, brokers)	_____ %	_____ %

APPENDIX A-3 (continued)

4) PURCHASES: Please list below what quantity of each raw fish species you purchased during 1980 and the cost (in dollars) of those purchases. In the last column, indicate what percentage was purchased from firms outside California.

<u>Species Type</u>	<u>Total Amount (\$) Purchased in 1980</u>	<u>Percent (%) Purchased Outside California</u>
Crustaceans (shrimp, crab, lobster)	_____	_____
Mollusks (clams, abalone, squid, oyster)	_____	_____
Flatfish (sole, flounder, halibut)	_____	_____
Wetfish (anchovy, sardine, herring)	_____	_____
Sablefish, Hake, Rockfish	_____	_____
Sharks, Rays, Skates	_____	_____
Salmon (King, Silver, Pink)	_____	_____
Billfish (swordfish, marlin, etc.)	_____	_____
Tuna	_____	_____
Other, circle which species (cod, bass, croaker, perch, etc.)	_____	_____

5) EXPENSES: Please list below what proportion of your total 1980 expenses was made up by each of the items shown. You may report either actual dollar amounts (\$) or percentage of your total 1980 costs (%), but please indicate which measure you are using. In the last column, indicate what proportion was paid to firms outside California. Note: If any individual "Other" type of expense exceeded 3% of your total expenses, please be sure to break it out.

<u>Type of Expenditure</u>	<u>Amount (\$) or Percent of Total Cost</u>	<u>Percent (%) Spent Outside California</u>
<u>A. Material Costs</u>		
Raw Fish Purchased (Total from Question 3)	_____	_____
Other Goods Purchased (specify):		
_____	_____	_____
_____	_____	_____
_____	_____	_____

APPENDIX A-3 (continued)

3) EXPENSES (continued)

<u>Type of Expenditure</u>	<u>Amount or Percent of Total Cost</u>	<u>Percent (%) Spent Outside California</u>

APPENDIX B

DEFINITION OF SECTORS FOR  
1982 CIF MODEL

- B-1 CALIFORNIA FISH HARVESTING SECTORS (SECTORS 1-20)
- B-2 CALIFORNIA FISH PROCESSING SECTORS (SECTORS 21-29)
- B-3 CALIFORNIA NON-FISHERY SECTORS (SECTORS 30-64)

FISH HARVESTING SECTORS OF CIF MODEL  
(Sectors 1-20)

Sector 1 - Groundfish Trawlers, North

Survey response: 13 returns

Criteria

Primary gear: Trawl

Home port: From Monterey - north

Value of catch: Crustaceans less than or equal to any other species (used to eliminate shrimpers)

Sector 2 - Groundfish Trawlers, South

Survey response: 5 returns

Criteria

Primary gear: Trawl

Home port: From Santa Barbara - south

Value of catch: Crustaceans less than or equal to any other species (used to eliminate shrimpers)

Sector 3 - Shrimp Trawlers

Survey response: 2 returns

Criteria

Primary gear: Trawl

Value of catch: Crustaceans greater than or equal to any other species

Sector 4 - Tuna Seiners

Survey response: 4 returns

Criteria

Primary gear: Purse-seine

Holding capacity: Greater than 900 short tons

Value of catch: Exclusively tuna

Sector 5 - Wetfish Seiners

Survey response: 6 returns

Criteria

Primary gear: Purse-seine

Holding capacity: Less than 500 short tons

Value of catch: Mollusks (squid), wetfish (mackerel and anchovy), tuna

Sector 6 - Herring Gillnetters

Survey response: 24 returns

Criteria

Primary gear: Gillnet

Home port: From Monterey - north

Value of catch: Herring (wetfish) greater than any other species

Sector 7 - Other Gillnetters

Survey response: 38 returns

Criteria

Primary gear: Gillnet

Value of catch: Herring (wetfish) less than any other species

Sector 8 - Small Salmon Trollers

Survey response: 72 returns

Criteria

Primary gear: Troll and a few pole and line

Secondary gear: Not pots and traps

Vessel length: Less than or equal to 32 feet

Value of catch: Salmon greater than zero; greater than any other species

Sector 9 - Large Salmon Trollers

Survey response: 124 returns

Criteria

Primary gear: Troll and a few pole and line

Secondary gear: Not pots and traps

Vessel length: Greater than 32 feet

Value of catch: Salmon greater than zero; greater than any other species

Sector 10 - Salmon - Crabber

Survey response: 38 returns

Criteria

Primary gear: Troll

Secondary gear: Pots and traps

Value of catch: a) Crustaceans greater than sablefish

b) Salmon greater than zero

c) Salmon greater than all other species except crustaceans

Sector 11 - Salmon - Albacore

Survey response: 30 returns

Criteria

Primary gear: Troll

Secondary gear: Not pots and traps

Value of catch: a) Salmon greater than zero

b) Tuna greater than zero and greater than any other species except salmon

Sector 12 - Longliners

Survey response: 6 returns

Criteria

Primary gear: Longlines

Sector 13 - Hook and Line

Survey response: 7 returns

Criteria

Primary gear: Hook and line

Sector 14 - Black Cod Pots

Survey response: 3 returns

Criteria

Primary gear: Pots and traps

Value of catch: a) Sablefish greater than any other species  
b) Crustaceans equal to zeroSector 15 - Crab - Lobster, North

Survey response: 35 returns

Criteria

Primary or secondary gear: Pots and traps

Primary gear: Not gillnet

Home port: From Santa Barbara - north

Value of catch: Crustaceans greater than any other species

Sector 16 - Crab - Lobster, South

Survey response: 19 returns

Criteria

Primary or secondary gear: Pots and traps

Primary gear: Not gillnet

Home port: From Santa Barbara - south

Value of catch: Crustaceans greater than any other species

Sector 17 - Baitboats

Survey response: 7 returns

Criteria

Primary gear: Pole and line or rod and reel

Value of catch: a) Tuna greater than any other species  
b) Rockfish equal to zeroSector 18 - Jigboats

Survey response: 31 returns

Criteria

Primary gear: Troll

Value of catch: a) Tuna greater than any other species  
b) Salmon equal to zeroSector 19 - Diveboats

Survey response: 33 returns

Criteria

Primary gear: Scuba or hooka

Sector 20 - Harpoon Billfish

Survey response: 42 returns

Criteria

Primary gear: Harpoon

Value of catch: Billfish greater than any other species

APPENDIX B-2

FISH PROCESSING SECTORS OF THE CIF MODEL  
(Sectors 21 - 29)

Sector 21 - Small Fish Wholesalers, Processors, & Distributors

- \* Engage in some processing, icing and packing of fish but primarily involved in marketing and distribution of fish for subsequent preparation or retail markets.
- \* Reported gross sales during 1980: Less than \$1 million

Sector 22 - Medium Fish Wholesalers, Processors, & Distributors

- \* Engage in some processing, icing and packing of fish but primarily involved in marketing and distribution of fish for subsequent preparation or retail markets.
- \* Reported gross sales during 1980: \$1 million to \$5 million

Sector 23 - Large Fish Wholesalers, Processors, & Distributors

- \* Engage in some processing, icing and packing of fish but primarily involved in marketing and distribution of fish for subsequent preparation or retail markets.
- \* Reported gross sales during 1980: Greater than \$5 million

Sector 24 - Fish Import/Export Brokers

- \* Firms primarily engaged in the trading of fish and seafood products in international markets; may engage in minor processing, repackaging or storing of fishery products.

Sector 25 - Tuna Cannerys

- \* Primarily engaged in the canning of tuna for human consumption and the canning of tuna by-products for petfood. Also involved in the occasional packing of squid, mackerel and other species and the reduction of fish waste to fish meal and fish oil.

Sector 26 - Seafood Restaurants

- \* White tablecloth and family-size seafood specialty restaurants and eating places attached to seafood markets. (See question 1 of processor questionnaire.)

Sector 27 - Other Eating and Drinking Places

- \* Away-from-home non-institutional eating places as defined in Sector 447 of 1977 National Input-Output Tables.

Sector 28 - Seafood Markets

- \* Retail outlets engaged primarily in selling of fresh and frozen seafood products.

Sector 29 - Other Food and Kindred Products

- \* Processors of food and animal products not covered under Sectors 21-28; as defined in Sector 59 of the 1977 S.I.C. for the National Input-Output Tables.

APPENDIX B-3

NON-FISHERY SECTORS OF THE CIF MODEL  
(Sectors 30-65)

CIF Sector Number -----	CIF Sector Title -----	Corresponding 1977 Industrial Classification Number Used in National I-O Tables -----
		(see Appendix A)
30	Forestry & Freshwater Fisheries	11
31	Forestry & Fishing Services	12
32	Petfood	78
33	Animal & Marine Fats & Oils	97
34	Ship & Boat Yards	383,384
35	Motor Freight	422
36	Agriculture	1
37	Mining	13-25
38	Construction	51,52
39	Lumber	136-149
40	Furniture	150-162
41	Glass, Stone, Clay	29-43
42	Metal	254-303
43	Non-electric Machinery	304-335
44	Electric Equipment	336-375,427
45	Transportation Equipment	376-389,420-426
46	Instruments	390-399
47	Misc. Manufactured Goods	400-419
48	Textiles	107-120
49	Apparel	121-135,221-228
50	Paper	163-175
51	Printing	176-190
52	Chemical	191-210
53	Petroleum	211-213
54	Rubber & Plastic	214-219
55	Leather	220
56	Telephone/Public Utilities	427-431
57	Wholesale Traders	432
58	Retail Traders	433
59	Insurance	437,438
60	Finance	434,435
61	Service	441-457
62	Federal Government	458-461
63	State & Local Government	462-464
64	Scrap Materials	466
65	California Households	
66	Imports/Exports (outside California)	

APPENDIX C

AN ECONOMIC IMPACT CALCULATOR  
FOR CALIFORNIA FISHERIES

# AN ECONOMIC IMPACT CALCULATOR FOR CALIFORNIA FISHERIES

This 'impact calculator' provides an easy reference for identifying economic linkages associated with California fisheries. It can be used to estimate the economic impact of fishery management options when more detailed economic analysis is not possible. The impact calculator contains income, output and employment multipliers for 20 California-based fishing fleets and 9 California-based fish processing activities and instructions for using them.

## TABLE OF CONTENTS

Page 1	Introduction and Operating Instructions
Page 2	Table 1 - Dollar Value of 1982 California Fish Landings
Page 3	Table 2 - Income, Output and Employment Multipliers for California Fish Harvesters and Fish Processors
Page 4	Table 3 - Dollar Value of 1982 Fish Purchases by California Fish Processors Table 4 - Dollar Value of 1982 Transactions between California Fish Harvesters and Processors

## INTRODUCTION

Conserving coastal fisheries sometimes requires changes in regulations that must be implemented quickly before there is time to thoroughly assess direct and indirect economic impacts. As California fisheries become more fully utilized, there are more occasions when within-season regulatory changes and immediate changes in season or area closures will be employed to protect fish resources. There is usually more than one management option available for achieving conservation goals, but there is rarely time for conducting special-purpose studies to show how various options can affect the California economy.

The landing of fish by California fishermen and the handling of fish by California processors has a 'rippling' effect that generates jobs, incomes and economic activity throughout the state. The economic impact calculator presented here contains multipliers to estimate the indirect and induced changes in the California economy that result from changes in landings by California fishermen or changes in the amount of fish processed in California.

The values presented here are based on the results of an inter-industry study of California fisheries performed during 1981-1982. The computer simulation developed as part of that study and the methods used to generate the economic multipliers used here are described thoroughly in Sea Grant Publication No. 83-1, The California Interindustry Fisheries (CIF) Model, which is available from the California Sea Grant Office, Scripps Institution of Oceanography, La Jolla, CA 92037.

## INSTRUCTIONS

### Requirements

The user must determine how a change or a proposed change affects the exvessel value of California fish landings. If more than one fleet is affected the direct change in the value of exvessel landings by each fleet must be estimated. Since vessels in each fleet can respond to change by redirecting fishing effort the user must consider the value of landings of all primary and secondary target species in determining the change in the value of landings by each fleet.

### Procedures

- Step 1 - Estimate change in exvessel fish sales by each relevant sector.
- Step 2 - Look up output, income, and employment multipliers in Table 2.
- Step 3 - Multiply change in exvessel fish sales for each relevant sector by the appropriate multiplier.
- Step 4 - Add values calculated for each relevant sector in Step 3. (Note that multipliers for fish processing sectors already include the impact of changes in fish harvesting sectors. Multipliers showing the impact of changes in processed fish sales, when they are used, should not be combined with the impact estimates associated with fish harvesting sectors.)

### Example

Suppose that a regulatory change is expected to increase fishing by California salmon/albacore trollers and result in increased albacore landings of 2000 short tons. At 1982 prices this would mean an increase of \$3.5 million in landings by Sector 11. If the regulatory change is expected to have no other direct impact on California fish harvesters, the expected direct, indirect, and induced impacts on the California economy are:

Increased California Household Income	\$ 3.13 million	(0.89479 x \$3.5 million)
Increased California Economic Activity	\$12.51 million	(3.57494 x \$3.5 million)
Increased California Employment	344 jobs	(98.43 x \$3.5)

TABLE 1

## DOLLAR VALUE OF 1982 CALIFORNIA FISH LANDINGS

Harvesting Sectors	Crustaceans	Mollusks	Flatfish	Wetfish	Sable/ Rockfish	Shark/Rays/ Skates	Salmon	Billfish	Tuna	Cod/Bass/ Perch/Other	Total
1) Groundfish Trawlers, N	17,576	0	7,750,541	0	10,874,594	2,608	293,402	0	2,442	3,591	18,944,755

This table shows the dollar value of 1982 landings by each of California's major fishing fleets. READING DOWN A COLUMN shows the 1982 dollar value of landings of a given species by each major fleet class. READING ACROSS A ROW shows the 1982 dollar value of landings of each species by a given fleet class.

TABLE 2

INCOME, OUTPUT, AND EMPLOYMENT MULTIPLIERS FOR CALIFORNIA  
FISH HARVESTERS AND FISH PROCESSORS \*

Sector Number & Title	Household Income Generated per Dollar Value of Landings	California Output Generated per Dollar Value of Landings	California Jobs Generated per Million Dollar Value of Landings
<b>Harvesting Sectors</b>			
1) Groundfish Trawlers, Northern	0.97445	3.71761	100.86
2) Groundfish Trawlers, Southern	1.10276	3.71933	32.24
3) Shrimp Trawlers	1.11234	3.80333	46.57
4) Tuna Purse-Seiners	1.04829	3.68427	28.18
5) Wetfish Seiners	1.06005	3.84751	82.87
6) Herring Gillnetters	0.99589	3.47650	48.67
7) Other Gillnetters	1.02570	3.74547	103.18
8) Small Salmon Trollers	0.86765	3.55519	385.87

<b>TOTAL</b>	<b>2790</b>	<b>25170</b>	<b>52270</b>	<b>12790</b>	<b>134050</b>	<b>0</b>	<b>227070</b>

This table shows the 1982 dollar value of transactions between California fishermen and California-based fish buyers. Reading down a column shows the dollar value of transactions between a given type of fish buyer and operators in each fleet class. Reading across a row shows the dollar value of transactions between operators in a given fleet class and each type of fish buyer.

\* In the analysis used to generate values for this table Sectors 26-29 are shown to buy fish from primary on-shore buyers (Sectors 21-25) and not directly from fishermen (Sectors 1-20). This introduces a small amount of error into the analysis since there are certainly some transactions between fishermen (Sectors 1-20) and other fish buyers (Sectors 26-29).
