

Supporting coastal communities, businesses and Texans

Texas Sea Grant is a unique partnership that unites the resources of the federal government, the State of Texas and universities across the state to create knowledge, tools, products and services that help coastal communities, marine industries and the people of Texas.

We support practical research that provides solutions to real-world problems, and our extension team works directly with coastal stakeholders and residents to help them adopt the resulting tools and techniques to benefit themselves and their communities.

Inspired by the Land Grant agricultural extension model, we have served the State of Texas for 46 years from our headquarters at Texas A&M University in College Station and our extension field offices in counties and cities along the Texas coast.

Texas Sea Grant 2014-2017 Impacts

4,316 acres

of coastal
habitat restored

**277 university
students
supported**

70 students

received jobs in their field
within two years of graduation
