The National Oceanic and Atmospheric Administration (NOAA), organized in 1970, has evolved into an agency that establishes national policies and manages and conserves our oceanic, coastal, and atmospheric resources. An organizational element within NOAA, the Office of Fisheries is responsible for fisheries policy and the direction of the National Marine Fisheries Service (NMFS).

In addition to its formal publications, the NMFS uses the NOAA Technical Memorandum series to issue informal scientific and technical publications when complete formal review and editorial processing are not appropriate or feasible. Documents within this series, however, reflect sound professional work and may be referenced in the formal scientific and technical literature.

NOAA Technical Memorandum NMFS

This TM series is used for documentation and timely communication of preliminary results, interim reports, or special purpose information. The TMs have not received complete formal review, editorial control, or detailed editing.

SUMMARY

This report lists the placement of 2454 osteological specimens in 17 museums and collections in the U.S., Canada, U.K., Japan, France, and the Netherlands.

U.S. Government scientific observers onboard commercial tuna purse seiners in the eastern tropical Pacific (Gerrodette 2009) collected 2454 heads or whole carcasses of dolphins killed in the fishing operation between 1966 and 1992. The specimens were prepared at the Southwest Fisheries Science Center (SWFSC) or the National Museum of Natural History and dispersed to museums in several countries. The osteological specimens (Appendix) consist of skulls or complete skeletons. Associated life-history data (reproductive condition) and other tissues (gonads and teeth) are archived at the SWFSC, as are the original field data forms (containing blood stains from the specimens). Photographs and external measurements are available for some. The museum material includes a number of series of specimens taken together in single schools.

The entries are listed alphabetically by species and museum acronym and include museum number, field number (observer's initials plus serial number, except for CV and PQ series, which use initials of the vessel), sex (M or F), body length in cm (tip of rostrum to base of notch in flukes), locality (degrees, minutes, N/S longitude; degrees, minutes, E/W longitude), and date (year, month and day). An electronic copy of the list is available from the authors.

In the course of collecting, preparing, shipping and curating the thousands of specimens collected, there were inevitably some specimen mix-ups: 1) a specimen of *Stenella attenuata* was given two catalog numbers at the U.S. National Museum (USNM 487258 and 487320); 2) another specimen of *S. attenuata* was given two numbers (USNM 482809 and 502344); 3) at sea on a tunaboat, 2 specimens of *S. attenuata* collected at the same place and time were given the same field number CWO 376 (USNM 487315 and 487388); the length and sex may be wrong for one of them; 4) at the SWFSC, 2 skulls of *Stenella longirostris* were both noted as shipped to the British Museum (NHM(BM) ZD.1990.93 and ZD.1990.94) and the U.S. National Museum (USNM 504351 and 504352); the data for one of the pairs of museum specimens must be erroneous. These errors are not noted in the appendix list, which reflects the current museum catalog lists.

ACKNOWLEDGEMENTS

We owe thanks to the curators who supplied the information on the specimens in their museums: Kamal Khidas (CMNMH), Lawrence Heany and William Stanley (FMNH), James Dines and David Janiger (LACM), Catherine Lefevre (MNHN), Richard Sabin (NHM(BM)), Tadasu Yamada (NSM), Gary Shugart (PSM), Michelle Berman (SBMNH), Phillip Unit (SDMNH), Janet Braun (SNOMNH), Charles Potter (USNM), Jeff Bradley and Laura Morse (UWBM), and Wendy van Bohemer and Adri Rol (ZMA). The 158 tunaboat observers who collected the specimens spent a total of more than 13 years at sea in pursuit of data that helped improve the conservation status of the dolphins involved in the fishery: D.
