Catalogue of the Invertebrate Fauna of Old Woman Creek Estuary, Watershed, and Adjacent Waters of Lake Erie

INTRODUCTION

Although much of Ohio's Lake Erie shoreline is highly developed, a few areas with significant natural features remain relatively undisturbed. One of these is a freshwater estuary located at the mouth of Old Woman Creek, about 5 km east of the city of Huron, Ohio. On the south shore of Lake Erie, this estuary lies near the southernmost point of the Great Lakes system. The Ohio Department of Natural Resources began the process of acquiring the property surrounding this estuary in 1975 and applied to the National Oceanic and Atmospheric Administration for financial assistance to protect this unique natural area. In 1980 Old Woman Creek estuary received National Estuarine Research Reserve (NERR) designation. The NERR system is a network of federal, state, and community partnerships which serve to promote informed management of our nation's estuarine and coastal habitats through linked programs of scientific understanding, public education, and stewardship. The 230-hectare Old Woman Creek National Estuarine Research Reserve and State Nature Preserve (hereafter referred to as the Reserve) serves as a field laboratory where scientists can study naturally functioning systems and is a place where students and the public can learn about estuarine ecology in a natural setting.

As a transition zone between land and water, Old Woman Creek estuary and its immediate environs contain several distinct habitats, including woodlands, a prairie remnant, creek valley, swamp forest, marshes, wooded coves, open waters of the estuary, an island, barrier beach, and nearshore Lake Erie (Figure 1). The estuary is the drowned mouth of a relatively small tributary to Lake Erie. Estuarine wetlands, consisting of 60 hectares, extend 2 km south of the Lake Erie shore. As the result of wave action and littoral drift, a barrier beach has formed at the mouth which bars off the estuary for extended periods. The barrier is periodically broken by storm flow from the watershed, but occasionally Lake Erie storm surges spill over the bar and into the estuary.

Old Woman Creek drains 69 km² of primarily agricultural land (Figure 2). The headwater tributaries of Old Woman Creek originate on the till plain surface at an elevation of approximately 270 m above sea level. The creek empties into Lake Erie 24 km downstream, dropping 96 m as it flows over the rolling till plain, through the high Berea escarpment, and down the gentle lake plain. Two main branches, east and west, originate in the till plain, cut independently through the sandstone escarpment, and join on the lake plain about 2 km south of the estuary. Floral habitats within the watershed include hardwood forests, meadows, ravines, sandstone hills, abandoned beach ridges, creek banks, floodplains, active and old agricultural fields, and rights-of-way margins.

INVERTEBRATES

Invertebrate is the name given to any of the animals or animal-like organisms without backbones as contrasted with the vertebrates (e.g. fish, amphibians, reptiles, birds, and mammals); all of which have a vertebral column. Taxonomically, invertebrates are grouped into some 37 phyla in two kingdoms: Protista and Animalia. Representatives of 13 of the invertebrate phyla have been identified in Old Woman Creek estuary and watershed, and adjacent waters and tributaries of Lake Erie. Altogether, a total of 1,352 taxa of aquatic and terrestrial invertebrates documented from the study area are listed in the catalogue.

PROTISTA: PROTOZOANS

Protozoans consist of a large group of unicellular animals that have adapted their cell to serve as the entire body. Classified as a subkingdom of the Kingdom Protista, protozoans are not simple organisms because within a single cell they must perform all of the body functions for which higher animals have many organ systems. Protozoans live under almost all natural conditions where moisture is found (Jahn et al. 1979). Within Old Woman Creek estuary and watershed researchers have identified 318 taxa of these microscopic creatures.

The locomotor organelles of Protozoa are used to separate them into major taxonomic groups. These organelles include: (1) undulipodia, which posses cilia or flagella and (2) pseudopodia, which are elongated extensions of the body formed by protoplasmic flows. Undulipodia produce rotary, undulatory, and helical wave motions that propel the cell, whereas pseudopodia create flowing motions (Pearse et al. 1987). The protozoans identified at Old Woman Creek are of the following types (taxa reported):

SUBKINGDOM PROTOZOA	UNDULIPODIA	PSEUDOPODIA
PHYLUM SARCOMASTIGOPHORA (198)	CILIA	FLAGELLA
Subphylum Mastigophora (145)	•	
Class Dinoflagellata (2)	•	
Class Phytomastigophora (48)	•	
Class Euglenaea (60)	•	
Class Zoomastigophora (35)	•	
Subphylum Sarcodina (53)		•
Class Lobosa (33)		•
Class Filosa (4)		•
Class Granuloreticulosa (2)		•
Class Heliozoa (14)		•
PHYLUM CILIOPHORA (120)	•	
Class Kinetofragminophora (53)	•	
Class Oligohymenophora (28)	•	
Class Polyhymenophora (39)	•	

PHYLUM SARCOMASTIGOPHORA

The sarcomastigophorans include both flagellated and amoeboid protozoans, thus the phylum is divided into two subphyla based on the type of locomotion organelles. The mastigophorans possess flagella, whereas the sarcodines utilize pseudopodia.

Subphylum Mastigophora

Mastigophorans are protozoans that have one or more flagella. Some are plant-like and contain green chloroplasts (chromatophores), such as the dinoflagellates, phytomastigophores, and euglenoids. Other are more animal-like and lack chloroplasts, such as the zoomastigophores. Many of the species in this subphylum are considered algae and are also listed in *Catalogue of Algal Flora and Lower Plants* [Old Woman Creek Technical Report No. 13: Site Profile Contribution No. 4].

Class Dinoflagellata. Dinoflagellates differ from other mastigophores in having a transverse groove or “girdle” holding a circumferential flagella. The groove typically has a posterior extension which has another (longitudinal) flagella. The body is commonly armored with thick cellulose plates ranging in color from reddish-brown to yellow. The forward part of an armored cell is referred to as the epitheca and the behind part is the hypotheca. Dinoflagellates are a major food source for aquatic organisms. The genus *Gymnodinium*, which is a benthic inhabitant of the estuary, has green chloroplasts but lacks a protective cellulose case (theca).

Class Phytomastigophora. Three orders of this class comprise common benthic groups in the estuary: cryptomonads, chrysomonads, and volvoceans. Cryptomonads are very small, flattened protozoans with distinct reservoir pockets and yellow to brownish-green chloroplasts. Chrysomonads are also very small protozoans that possess a variety of features including spines, pallmella (group of cells in a gelatinous matrix), lorica (loose fitting sheath), branched stalk, and colonial arrangements. Volvoceans are larger solitary or colonial protozoans with cellulose walls through which 2 to 8 flagella extend from each cell.

Class Euglenea. Euglenoids are flagellates that typically have grassy green chloroplasts and reddish sigma (eyespot with photoreceptive function). They store carbohydrates as granules in an anterior reservoir (Ruppert and Barnes 1994). The family Trachelomonadidae consists of euglenoids that are each housed in a self-secreted lorica of various shapes. The order Peranemida are colorless euglenoids that obtain their nutrition by absorbing dissolved food through the cell membrane (saprobic) or by the ingestion of organic material as animals must do (holozoic). They exhibit a distinct gullet in contrast to the indistinct gullet of the pigmented euglenoids.

The organisms known as “euglenoids” constitute a controversial group in terms of the traditional plant verses animal debate. Most euglenoids are chlorophyll-bearing (chlorophytes), protozoa-like organisms of the Protista, and as such the chlorophytes can be considered members of the algae, Division Euglenophyta (Taft and Taft 1971).

Class Zoomastigophora. These mastigophorans lack chloroplasts and stigma. Members of the family Codonosigidae typically have a transparent, ovoid body with a protruding collar that encircles a flagellum. Some individuals resemble collared cells lining the incurrent channels of sponges, suggesting an evolutionary relationship. Codonosigids are solitary or colonial, some with lorica, and some are stalked. The other common family in Old Woman Creek, Bodonidae, has two flagella and kinetoplasts (a replicating structure located near the base of the flagella). Nutrition is holozoic or coprozoic (ingestion fecal pellets that have enriched by microbial activity).

Subphylum Sarcodina

Sarcodina are distinguished by their movement, which is induced protoplasmic flow, and their pseudopodia which are temporary cytoplasmic extensions. Pseudopodia can be long and thin (axopodia), tapered and branched (filopodia), granular and interweaving or “anastomosing” (granuloreticulopodia), large and finger-like (lobopodia), and polytubular (myxopodia). In addition to locomotion, pseudopodia are used to capture food. Four classes of these protozoans have been identified in Old Woman Creek estuary.

Class Lobosa. This large group contains the protozoans more commonly known as “amoebas” and their close relatives which form tests or shells. Amoebas typically form lobopodia of various types which facilitate locomotion. The family Diffugiidae, represented by several benthic species in the estuary, form shells composed of mineral particles that are ingested by these protozoans and embedded in a secreted matrix (Ruppert and Barnes 1994).

Class Filosa. Members of this class found in Old Woman Creek feed on algae. *Vampyrella lateritia* has a round bright orange body, the color imparted by carotinoid granules derived from algal food. Using filopodia that resemble suctorial tentacles, these protozoans enter algal cells by digesting a hole in the cellulose wall of the alga, insert pseudopodia and digest the internal protoplasm, and then move to the next cell to repeat the process (Jahn et al. 1979). *Vampyrella* is responsible for the destruction of much filamentous algae, such as the green alga *Mougeotia*.

Class Granuloreticulosa. Most of the protozoans in this group form a calcareous test from which, through small pores, the granuloreticulopodia are extended in bundles that branch and form interweaving networks around the body (Jahn et al. 1979). In Old Woman Creek estuary, this class is represented by *Biomyxa vagans* in the order Athalamida and *Diplophrys archeri* in the order Foraminiferida.

Class Heliozoa. These delicate protozoans have spherical bodies with many radiating axopodia giving rise to their common name, “sun animalcule.” *Actinophrys sol*, found in Old Woman Creek, is a typical freshwater form of this group. Some members, such as the genus *Heterophrys*, have skeletons composed of silica secreted by the organism and embedded in an outer gelatinous covering.

PHYLUM CILIOPHORA

The ciliates propel their bodies and food with short cilia (undulipodia). Many species have two types of nuclei, large ones (macronuclei) and small ones (micronuclei). Many ciliates have cilia in rows on the body or in tufts, but no specialized cilia around the mouth. Other ciliates have cilia grouped in or around the mouth, besides in rows over the body.

Class Kinetofragminophora. Members of this class lack cilia as special organelles around or in the mouth. However, some members of the order Prostomatida do have club-shaped tactile cilia around the mouth. Representative of this group in the estuary, *Coleps octospina* has a barrel-shaped body with eight posterior spines. Ciliates in the order Haptorida found in the estuary are rapacious carnivores, such as *Didinium nasutum* which preys on *Paramecium*. Members of the order Suctorida only have cilia as larvae; adults are sessile with sucking and piercing tentacles used to catch prey and extract the cytoplasm. The suctorean *Acineta*, has a short stalk which is commonly attached to algae on the carapaces of turtles.

Class Oligohymenophora. These ciliates have a series of cilia or an undulating membrane that curves counter-clockwise along the rim of the mouth cavity. The common, and extensively studied, aquatic genera *Paramecium* and *Tetrahymena* are members of this class and are residents of the estuary. These ciliates possess water expelling vesicles to eliminate excess water engulfed during the feeding process. Members of the suborder Sessilina of the order Peritrichida, such as *Vorticella campanula*, are often attached by a self-produced stalk to a variety of substrates in aquatic habitats, but large peritrichs have been reported in western Lake Erie plankton (Herdendorf and Monaco 1983). Planktonic *Vorticella* are commonly associated with colonies of the blue green alga *Anabaena flos-aqua*.

Class Polyhymenophora. These ciliates all have a band of membranelles (fused rows of cilia) arranged clockwise around or leading to the mouth. Members of the order Hypotrichida scuttle about on their ventral cirri (tufts of cilia fused together to form stiff, motile structures) as if they had tiny legs. In the estuary, Styloynchia is typical of this order with distinct frontal, ventral, anal, and caudal cirri (Kudo 1939). In the family Tininnidae of the order Oligotrichida, the transparent body of *Tinntinnidium fluviatile* is attached inside a trumpet-shaped lorica. The lorica is commonly impregnated with an agglomeration of sediment particles and is attached to submerged vegetation in the estuary.

ANIMALIA

Invertebrate animals differ most importantly from plants in that these animals are heterotrophs, that is they must obtain energy in the form of organic food produced by other organisms. Most of the distinctive characteristics of animals are associated with the requirements of finding, engulfing, and digesting food (Parker 1982). Animalia invertebrates from the following 11 phyla have been identified in the Old Woman Creek study area, altogether yielding 1,034 species (taxa reported):

- PHYLUM PORIFERA:** Class Demospongiae (horny sponges) (2)
- PHYLUM CNIDARIA:** Class Hydrozoa (hydras) (2)
- PHYLUM PLATYHELMINTHES:** Class Turbellaria (flatworms) (5)
- PHYLUM GASTROTRICHA:** Class Chaetonotida (gastrotrichs) (2)
- PHYLUM ROTIFERA** (rotifers) (34)
 Class Bdelloidea (3)
 Class Monogononta (31)
- PHYLUM NEMATODA:** Class Adenophorea (roundworms) (3)
- PHYLUM MOLLUSCA:** (33)
 Class Gastropoda (snails) (11)
 Class Bivalvia (clams) (22)
- PHYLUM ANNELIDA:** (46)
 Class Hirudinea (leeches) (4)
 Class Oligochaeta (segmented worms) (42)
- PHYLUM ARTHROPODA:** (901)
 Class Arachnida: (77)
 Order Araneae (spiders) (74)
 Order Acriformes (water mites) (3)
- Class Crustacea: (83)
 Subclass Branchiopoda: (39)
 Order Cladocera (water fleas) (39)
 Subclass Ostracoda (seed shrimps) (9)
 Subclass Copepoda (water-hoppers): (25)
 Order Calanoida (9)
 Order Harpacticoida (4)
 Order Cyclopoida (12)
 Subclass Branchiura: Order Arguloida (fish lice) (1)
 Subclass Malacostraca: (9)
 Order Isopoda (sow bugs) (2)
 Order Amphipoda (scuds) (4)
 Order Decapoda (crayfishes & shrimps) (3)
- Class Insecta: (741)
 Subclass Entognatha: (4)
 Orders Collembola & Diplura (springtails & diplurans) (4)
- Subclass Ectognatha: (737)
 Order Thysanura (bristletails) (1)
 Order Ephemeroptera (mayflies) (18)
 Order Odonata (damselflies & dragonflies) (49)
 Orders Blattaria & Mantodea (cockroaches & mantids) (4)
 Order Isoptera (termites) (1)
 Order Orthoptera (grasshoppers & crickets) (15)
 Order Dermaptera (earwigs) (4)
 Order Plecoptera (stoneflies) (14)
 Order Thysanoptera (thrips) (3)
 Order Hemiptera (true bugs) (78)
 Order Homoptera (cicadas, leafhoppers & aphids) (32)
 Order Neuroptera (nerve-wing insects) (11)
 Order Coleoptera (beetles) (178)
 Orders Mecoptera & Siphonaptera (scorpionflies & fleas) (3)
 Order Diptera (true flies) (126)
 Order Trichoptera (caddisflies) (65)
 Order Lepidoptera (butterflies & moths) (83)
 Order Hymenoptera (ants, bees & wasps) (52)
- PHYLUM TARDIGRADA:** Class Eutardigada (water bears) (1)
- PHYLUM BRYOZOA:** Class Phylactoaeata (bryozoans) (5)

PHYLUM PORIFERA

This phylum includes small freshwater sponges that are occasionally found in freshwater wetlands. They live in colonies, forming finger-like lobes, cushion-shaped masses, or encrusting patches. Because sponges do not require sunlight, they often live on the underside of submerged logs and other objects, commonly in association with bryozoan colonies and zebra mussels. Sponges of the estuary, Family Spongillidae, do not have specialized organs and are made up of a loose network of cells supported by siliceous spicules embedded in a collagen binder known as spongin (Thorp and Covich 1991). The chief food sources for sponges are very fine particulate matter and planktonic organisms suspended in the water column. As sedentary animals, they obtain their food by filtering the water that surrounds them through a series of pores located on the outer surface of their body.

PHYLUM CNIDARIA

This phylum, also known as Coelenterata, is primarily composed of marine members and has been relatively unsuccessful in adapting to freshwater except for the class Hydrozoa. In Old Woman Creek watershed two species of this class have been identified, the brown hydra (*Hydra americana*) from the estuary and a freshwater jellyfish (*Craspedacusta sowerbyi*) from an abandoned sandstone quarry pit (Baillie Quarry) 3.4 km northeast of Berlin Heights. The polyps of hydroids are common on many hard, submerged surfaces, while the medusoid jellyfish are rare and can be seemingly absent for a number of years. The body wall of cniderians is characterized by three layers, a thin acellular gel (mesoglea) sandwiched between two thicker cellular layers (ectoderm and endoderm) that surround a central body cavity. These animals capture most of their invertebrate prey with ectodermal batteries of stinging or sticky nematocysts.

PHYLUM PLATYHELMINTHES

In Old Woman Creek estuary this phyla is represented by 5 species in three orders of the class Turbellaria. Two of the orders (Catenulida and Neorhabdocoela) are considered micoturbellarians and members are typically less than 1 mm in length, whereas individuals of the other order (Tricladida) can reach up to 20 mm and are considered macroturbellarians. Triclads, also known as planarians, have been the subject of more study than the smaller orders. Turbellarians are unsegmented flatworms that live in benthic and epiphytic environments. Most flatworms scavenge bacteria, algae, and protozoans, although triclads are predatory on other invertebrates. These animals were never found in great numbers in the estuary, but they were widespread in the sediment and on plants.

PHYLUM GASTROTRICHA

Gastrotrichs are microscopic, elongated animals that colonize sediments and submerged plant stems and leaves. One genus, *Chaetonotus*, has been identified in Old Woman Creek estuary. *Chaetonotus* feeds on organic debris, algae, protozoans, and bacteria which are swept into its terminal mouth by the beat of four ciliated tufts which are arranged in pairs on either side of the head (Kershaw 1983). The body wall is covered by a cuticle secreted by the epidermis and the dorsal surface bears a series of spines and scales. Gastrotrichs have a relatively short life span—usually between 3 to 21 days.

PHYLUM ROTIFERA

Rotifers are small (<1 mm long) but active members of the aquatic community. The head characterized by a crown of feeding cilia (corona) that gives the appearance of revolving wheels—hence the group's scientific name "Rotifera" and the common name "wheel animalcules"—and a muscular pharynx with a set of hard jaws, the mastax. The cilia of the head region are also used for locomotion. Most species are transparent and many have a thickened, sometimes armored, body wall (lorica) that tapers to a tail-like projection called a foot. The foot contains glands that can secrete an adhesive material used to anchor the rotifer during feeding (Pearse et al. 1987). Thus these animals can be either planktonic or sessile. Some 34 taxa of rotifers have been identified for Old Woman Creek estuary and the adjacent waters of Lake Erie, in 2 classes, 3 orders, and 10 families. Rotifers occur in a variety of aquatic habitats, both benthic and planktonic. As a group, rotifers are considered generalist suspension feeders, consuming a wide variety of small animal prey and plants. However, certain species have highly specific food habits. Most rotifers are females—the male being diminutive and short-lived.

PHYLUM NEMATODA

Nematodes, commonly known as roundworms because of their circular cross-section, are a diverse group of animals that can occur in great numbers within a small area. Three genera (*Tobrilus*, *Dorylaimus*, and *Criconemoides*) in 3 orders and in 3 families of the class Adenophorea have been identified in Old Woman Creek estuary. Nematodes are small invertebrates (generally less than 1 cm long) that occur in most benthic and epiphytic habitats in the estuary and at times they are very abundant. Roundworms totally lack cilia and flagella. They move by undulatory propulsion in which sinusoidal waves pass backwards along the body length. This strategy is particularly suitable for movement in a fluid medium. The genus *Tobrilus* feeds on small microfauna, including other nematodes, *Dorylaimus* is adapted for harvesting algae and other microflora, and *Criconemoides* is an ectoparasite that commonly attacks plant roots which in turn form galls which then become preferred feeding sites for others of their kind (Parker 1982).

PHYLUM MOLLUSCA

These soft-bodied animals, often with hard calcareous shells, include two familiar freshwater classes: Gastropoda (snails) and Bivalvia (clams). Their fleshy mantle secretes a shell which consists of a protein matrix reinforced by crystalline calcium carbonate in the form of either calcite or aragonite. Respiratory gills (ctenidia) are located in a posterior cavity formed by folds in the mantle.

Class Gastropoda. Snails possess a single shell (or valve) that is either flatly coiled or spiraled into a cone-like shape. In the estuary, the shells are typically drab-colored and range in size from a few millimeters for the small physids to over 50 mm for the Japanese mystery snail (*Cipangopaludina japonicus*). Part of the soft body protrudes from the shell aperture and bears a distinctive head with a pair of tentacles, often containing photosensitive eyes. Ten species of aquatic snails, in 2 orders and 5 families, have been identified in Old Woman Creek estuary, as well as one terrestrial species in the watershed. Most of the snails are benthic organisms that move slowly over the sediments of the estuary. Many feed on encrusted growths of algae, while others are detritivores or omnivores. Some burrow into the soft muds or detritus during dry periods or when habitats become frozen solid in winter. The land snail, *Mesodon thyroidus* in the family Polygyridae, prefers the humid woodlands surrounding the estuary. Members of this family live under dead wood, leaves, and stones. They are mainly active nocturnally or during rain, and chiefly feed on mold and fungi (Parker 1982).

Class Bivalvia. Clams and mussels possess a two-piece shell, made up of 2 valves, thus the name "bivalve." The two opposing valves are connected by a hinge and are opened and closed with powerful muscles. Clam shells are commonly oval shaped, range in color from yellow to brown or green, and possess concentric, annular growth lines. Zebra and quagga mussels (*Dreissena polymorpha* and *Dreissena bugensis*), recent invaders of Lake Erie, have distinctive strips and litter the barrier beach at the estuary mouth. Unlike the snails, the protruding soft body parts of the bivalves lack head, eyes, and tentacles. Bivalves generally feed by filtering planktonic microorganisms out of the water, but some burrowing forms feed on organic matter strained from the substrate. Eight species of bivalves, in 2 orders and 3 families, have been found in Old Woman Creek estuary and an additional 14 species are found in the adjacent nearshore waters and tributaries of Lake Erie. Four of the bivalves reported for the nearshore waters of Lake Erie in the vicinity of the Reserve are listed by the Ohio Division of Wildlife (1992) as threatened (T) or of special interest (S); no other invertebrates found within the study area appear on the State list:

- Black sandshell (*Ligumia recta*) (T)
- Fawnsfoot (*Truncilla donaciformis*) (T)
- Deertoe (*Truncilla truncata*) (S)
- Purple wartyback (*Cyclonaiastuberculata*) (S)

PHYLUM ANELIDA

The most obvious trait of annelids is their body plan which consists of an elongated and segmented tube. Each segment is essentially the same and divided from the next segment by a ring-like marking. Two classes are found in the estuary, the leeches (*Hirudinea*) and aquatic and terrestrial earthworms (*Oligochaeta*).

Class Hirudinea. Leeches are flattened, segmented worms—often patterned and brightly colored. They possess both anterior (front) and posterior (rear) suckers, which are variously used for attachment, feeding, or locomotion. The leeches found in the estuary are either predators of other macroinvertebrates or temporary ectoparasites of fishes, amphibians, turtles, or water birds. Of the 4 species of leeches documented for the estuary, *Batracobdellaphalera*, a fish parasite, is the most common.

Class Oligochaeta. Aquatic earthworms are generally elongated, cylindrical worms that bear a few short bristles or hairs (chaeta) on each body segment. The silty bottom sediments and algal mats of the estuary have yielded 42 species of oligochaets in 2 orders and 4 families. Many are deposit feeders on the soft sediments of the estuary, utilizing the organic components for their nutrient source. Others feed primarily on periphyton or detritus, and a few are carnivorous, such as *Chaetogaster* spp.

PHYLUM ARTHROPODA

This phylum is the most successful in terms of numbers and diversity of terrestrial invertebrate animals and one of the most prominent freshwater taxa. Three of the classes are diverse and important components of the Old Woman Creek estuary and watershed: Arachnida (spiders and water mites); Crustacea (cladocerans, copepods, amphipods, and crayfishes); and Insecta (flies, bugs, and beetles). As a group, most members are characterized by a chitinous exoskeleton and ridged, jointed appendages which have been modified as legs, mouthparts, and antennae.

Class Arachnida

This class includes spiders, scorpions, ticks, and mites. In general, they are terrestrial arthropods that have their body divided into two main regions: (1) a cephalothorax (fused head and thorax) bearing 6 pair of appendages, of which 4 pairs are walking legs, and (2) an abdomen that bears no locomotive appendages. The 4 pairs of walking legs and the absence of antennas serve as a simple way to distinguish arachnids from insects which have 3 pairs of walking legs and prominent antennas. The two arachnid orders that contain spiders and mites are represented in the watershed.

Order Araneae. In spiders the cephalothorax is covered by a carapace shield which usually contains 8 simple eyes. The abdomen generally has 3 pairs of silk spinnerets. The proteinaceous fluid silk which issues from these appendages polymerizes under tension forming a hardened

thread (Pearse et al. 1987). The tips of the spinnerets have a battery of minute spinning tubes that connect with several kinds of silk glands which produce different types of silk for such purposes as constructing various parts of a web, producing adhesive threads, making a protective cocoon, and binding the prey. All spiders spin silk, but relatively few weave the spiraling orb webs (family Araneidae) found in the uplands surrounding the estuary. Within the Old Woman Creek watershed, 74 species of spiders, in 16 families, have been identified.

Order Acariformes. Mites differ from spiders in having their cephalothorax and abdomen fuse into an unsegmented, ovoid body. Only members of the suborder Hydrachnida have become adapted to aquatic environments. Most water mites are brightly colored—commonly dark red, scarlet, or orange. They breath air but spend extended periods on the mud bottom and submerged plants of the estuary searching for prey. Like spiders, water mites are carnivorous feeders, clutching their prey and sucking the body juice. Three genera of water mites have been identified in Old Woman Creek estuary.

Class Crustacea

Crustaceans are characterized by bodies that are divided into linear segments which are grouped into a head, thorax, and abdomen. They possess paired, joined appendages; and have an exoskeleton—a hard, durable, and protective body covering. The sclerotization of the covering (stiffening facilitated by chitinous plates) is interrupted at the joints which insures mobility. The exoskeleton is molted at intervals to permit growth of the individual. Nine orders of crustaceans are found in the Old Woman Creek study area, including cladocerans, ostracods, copepods (calanoids, harpacticoids, and cyclopoids), arguloids, isopods, amphipods, and decapods.

Subclass Branchiopoda. Order Cladocera (water fleas) consist of small crustaceans, 0.2 to 3.0 mm in length, that swim in rapid jerks caused by the beating of branched second antennae. Cladocerans are the preferred food of many young and adult estuary fishes. They have a distinct head with vision organs, usually consisting of a compound eye and a smaller light sensitive eye or ocellus (Ruppert and Barnes 1994). The body is covered by a protective bivalve carapace. Complex movements of thoracic legs produce a constant current of water between the valves which facilitates the filtering of food particles, such as bacteria, algae, protozoans, and organic detritus from the water. In Old Woman Creek, its estuary, and the adjacent nearshore waters of Lake Erie, a total of 39 species, in 8 families, have been identified.

Subclass Ostracoda. Commonly known as seed shrimp, these small crustaceans are distinguished by a bivalved carapace which envelops their soft body. They are typically herbivores or detritivores that live in benthic habitats. Nine species of ostracods, in 5 separate families, have been found in the estuary.

Subclass Copepoda. Copepods are another group of small crustaceans—subdivided into three orders: Calanoida, Harpacticoida, and Cyclopoida. Copepods have been estimated as the most numerous multicellular animal in the world (Pearse et al. 1987). They are voracious consumers of phytoplankton and small invertebrates and are in turn fed on by a variety of larger invertebrates and fishes. The copepod body is shrimp-like and ranges from 0.3 to 3.0 mm in length. They appear to glide rapidly and smoothly through the water by using thoracic appendages (calanoids) or the second antennae (cyclopoids). Harpacticoids are more benthic in nature and tend to crawl over the bottom. Identification of the three orders is based mainly on morphological details of appendages and feeding habits. Calanoid copepods feed largely by filtration of plankton. Their second antennae are used as screws to produce a current from which phytoplankton is either filtered or seized by the mouth. Cyclopoid copepods (so named for a single eye spot in the front of the head) do not filter feed but use mandibles to capture a variety of small animals, including mosquito larvae. Harpacticoid copepods inhabit macrophytes and littoral sediments, and feed mainly by scraping organic matter from submerged surfaces. A total 25 copepod species, in 4 families, have been reported from the estuary.

Subclass Branchiura. In the estuary, this subclass is represented by one genus, *Argulus*, in the order Arguloida. As the common name “fish lice” suggests, these small crustaceans are ectoparasites and attach themselves to the gills of fish. Their mandibles have been modified to form a pair of hooks and their maxillules have become large suckers. In *Argulus* the mandibles are incorporated into a specialized proboscis and a sheathed, hollow spine is used to pierce the skin of the host fish and extract body fluids (Thorp and Covich 1991).

Subclass Malacostraca. This subclass contains three important orders which are represented in Old Woman Creek estuary: Isopoda (aquatic sow bugs), Amphipoda (scuds), and Decapoda (crayfishes and shrimps). Isopods are dorsoventrally flattened and well adapted for crawling. As the name of the order implies, their walking-leg appendages are all similar in design. Most isopods are detritus feeders, such as *Caecidotea racovitzai*. Amphipods are more compressed laterally and tend to swim on their sides. Their first three pleopods (abdominal appendages) are modified as swimmerets. Two common amphipods in the estuary are *Gammarus fasciatus* and *Hyalella azteca*. Decapods are the largest arthropods in the estuary and are represented by two crayfishes (*Cambarus diogones* and *Orconectes rusticus*) and a glass shrimp (*Palaemonetes kadiakensis*).

Class Insecta

Insects, the largest class of invertebrates found in the Old Woman Creek watershed, consist of two subclasses: Entognatha, primitive insects represented by springtails and diplurans, and Ectognatha, true insects represented by 22 orders. Altogether, 741 taxa of insects have been identified from the study area.

Orders Collembola & Diplura. These orders include the springtails and diplurans. These primitive insects are small, wingless, and usually blind. Springtails have an abdominal jumping organ and well-developed legs. Diplurans have a v-shaped tail formed by two caudal filaments at the end of their abdomen. These insects live in damp leaf humus, decomposing wood, and soil beneath stones and fallen trees in the upland woodlots surrounding the estuary and throughout the watershed.

Order Thysanura. This order includes the silverfish. These fast-running insects have three narrow, elongated appendages at the end of the abdomen. Unlike the more primitive entognathan insects which occupy similar natural habitats, silverfish have compound eyes. These silver-gray insects can be domestic pests, feeding on the starch in books and textiles.

Order Ephemeroptera. This order includes the mayflies. These winged insects have medium-sized, elongated soft bodies with usually three long threadlike tails. Mayflies are unique insects in that a fully winged terrestrial life stage (subimago) precedes the sexually mature adult stage. The adult mouthparts are reduced and useless, thus they are short-lived as their "ephemeral" order name implies. Mayflies spend nearly all of their lives as nymphs in the waters of the creek, estuary, and lake. Aquatic nymphs of some 18 species have been found in the estuary, Old Woman Creek, and adjacent tributaries. The burrowing mayfly, *Hexagenia limbata*, has only two tails and is noteworthy because it emerges in enormous numbers from Lake Erie, piling up along the shore and in the streets of lakeside towns. Up until the middle 1950s this frequently happened along the shores of the lake, but environmental degradation in Lake Erie dramatically reduced the numbers of these insects for four decades. With improved the Lake Erie water quality in the 1990s, mayflies have experienced a resurgence.

Order Odonata. This order includes the damselflies and dragonflies. Within the Old Woman Creek study area, 25 species of damselflies and another 24 species of dragonflies have been identified. These relatively large, beautifully colored insects spend most of their time in flight. Their immature stages are aquatic (breathing by means of gills) and the adults are most often found near water. Both nymphs and adults are predaceous on various other insects and invertebrates, but they are harmless to humans in that they neither bite nor sting. The gills of damselfly nymphs are in the form of three leaflike structures at the end of the abdomen, while dragonfly gills are internal within the rectum. Dragonflies draw water in through the anus, extract dissolved oxygen, and expel it through the same organ. To escape predation, they can expel water rapidly yielding a type of jet propulsion. Adults of both groups have four elongated, many-veined, and membranous wings, but can be distinguished by the position of the wings while at rest—damselflies fold their wings close together vertically over their backs, while dragonflies hold their wings straight out horizontally from the body.

Orders Blattaria and Mantodea. These orders include the cockroaches and mantids. Cockroaches are relatively large, flattened, oval-shaped, and fast-running insects with long hair-like antennae and numerous leg spines. Their head is concealed under a triangular shield (pronotum). They have an unpleasant odor and feed at night, hiding in crevices during the day. The Oriental cockroach (*Blatta orientalis*) and the American cockroach (*Periplaneta americana*) commonly invade houses within the watershed, while the small, wood cockroach (*Parcoblatta*) is more often found in woodlots under dead logs and stones.

Mantids are large, elongated, and slow-moving insects that are striking in appearance because their front legs are bent in an upraised or "praying" position. They are predaceous on a variety of insects, usually laying in wait for their prey in this attitude. They are colored a protective green and brown that makes them difficult to see in foliage. Although strong fliers, they are rarely observed on the wing. The Chinese mantid (or praying mantis) (*Tenodera aridifolia sinensis*), now relatively common in the watershed, was introduced to the United States about 100 years ago near Philadelphia (Borror and DeLong 1971).

Order Isoptera. This order includes the termites. These social insects, sometimes called white ants, live in colonies that have a caste system with reproductive males and females, sterile workers, and sterile soldiers. Termites are destructive in that they feed entirely on wood, which is digested by protozoan living in their gut. The eastern subterranean termite (*Reticulitermes flavipes*) is found in the watershed. This termite eats the soft spring growth of wood, hollowing out the sapwood along the length of the grain and leaving only brown specks of excrement behind. As they consume living trees or wood buildings, they maintain contact with the ground by means of earthen tubes connecting the feeding galleries with the ground (Swan and Papp 1972).

Order Orthoptera. This order includes the grasshoppers, katydids, and crickets. These insects are noted for their powerful hind legs which are adapted for jumping by greatly enlarged third segments of the leg (femora). They usually have two pairs of long, narrow, many-veined wings. Crickets and katydids produce a characteristic sound, or song, by rubbing specialized parts of their forewings together, while band-winged grasshoppers snap hind wings in flight. Males generally do the singing; songs function mainly in getting the sexes together. Most members of this order are plant feeders, some very destructive to cultivated plants. Within the watershed, 6 grasshopper, 2 katydid, and 7 cricket species have been identified.

Order Dermaptera. This order includes the earwigs. These are medium-sized insects, typically brown in color, with short leathery forewings and long membranous hindwings that fold straight back under the front pair. Some species are wingless, such as the ring-legged earwig (*Euborellia annulipes*) which occasionally invades dwellings feeding on foodstuffs and house plants. A distinctive feature of earwigs is a pair of curved, pincer-like cerci at the hind end of insect that are used in defense, such as grasping an attacking ant. The wings of the European earwig

(*Forficulaauricularia*) are not strong enough to take off from the ground or for sustained flight and they can only fly by taking off from a high place. The order is represented by at least 3 species in the watershed.

Order Plecoptera. This order includes the stoneflies. The common name of these insects comes from the fact that they spend most of their life as nymphs (2-3 years) crawling among stones in streams, and as adults (15-20 days) they often rest on rocks near the water. They are poor fliers and are seldom found far from water. Stonefly nymphs are similar in appearance to mayfly nymphs, but they only have two tail filaments. Because stonefly nymphs lack extensive gills, obtaining oxygen from by diffusion through the body cuticle in many species, they occur only in oxygen-rich water. Thus, the presence of stonefly nymphs in a stream is an indicator of good water quality conditions. Most of the 14 stonefly species identified for the study were found in Old Woman Creek upstream of the estuary or in nearby Mill Hollow on the Vermilion River. The green-winged stonefly (*Isoperla duplicata*) feeds on the pollen of foliage along the banks of Old Woman Creek.

Order Thysanoptera. This order includes the thrips. They are mostly small, inconspicuous insects with two pairs of wings fringed with eyelash-like hairs. Although small, their bodies are well armored (sclerotized) and solid brown, black, or yellow in color. They can be found in most blossoms and feed by sucking juices from plants. A common thrips (family Thripidae), a three-tailed thrips (family Phlaeothripidae), and a banded thrips (family Aeolothripidae) have been observed in the watershed.

Order Hemiptera. This order includes the true bugs. These insects have widely differing sizes, shapes and habits. Their wings are usually thickened at the base and membranous at the tip. The main unifying characteristic of this order is the structure of the piercing-sucking beak (rostrum) and mouthparts which is common to all members. During piercing, the rostrum, richly supplied with organs of smell and touch, does not enter the tissue of the food organism, but guides a bundle of hollow, barbed stylets to the a favorable spot for the bite. Juices are most often sucked from the sieve tubes in the vascular bundles of plants. The order contains aquatic bugs such as water scorpions (*Nepa* and *Ranata*), giant water bugs (*Belostoma*), water boatmen (*Trichocorixa*), backswimmers (*Notonecta*), and water striders (*Gerris*), as well diverse terrestrial bugs including lace bugs (*Corythucha*), plant bugs (*Lygus*), assassin bugs (*Sinea*), seed bugs (*Lygaeus*), and stink bugs (family Pentatomidae), all of which have representatives in the study area. Unlike their land-based, plant eating counterparts, many water bugs attack any animal which they can manage, large or small, including small fish. Altogether, 78 species of bugs in 28 families have been identified in the vicinity of Old Woman Creek.

Order Homoptera. This order includes the cicadas, leafhoppers, and aphids. These insects are closely related to the true bugs, except homopteran wings are similar along their length and not

divided into a thickened, stronger base and a more fragile tip as they are in the order Hemiptera. All homopterans are terrestrial and vegetarians; most of them suck the juices from vascular plants. Many members of this order are serious pests of cultivated plants, causing damage by feeding and by serving as vectors of plant diseases. Common representatives in the study area include spittlebugs (*Philaenus*), cicadas (*Tibicen*), leafhoppers (*Graphocephala*), and aphids (*Aphis*). A total of 32 species of homopterans in 10 families have been found in the watershed.

Order Neuroptera. This order includes the nerve-wing insects, such as dobsonflies, alderflies, and lacewings. Members of this order have many veins in their delicate wings. The nymphs of dobsonflies (*Corydalus*) are aquatic; known as hellgrammites, they are extremely predacious and cannibalistic during this 2-to-3-year phase in streams such as Old Woman Creek. The larvae of the spongillafly (*Climacia*) are parasitic on and live in the cavities of freshwater sponges. These larvae move onto land in summer where they weave a cocoon, covered with hexagonal meshed net, on vertical objects near the shore. Here transformation to a pupa takes place before they emerge as flying adults. The green lacewing known as golden eye (*Chrysopa oculata*) appears in autumn in the watershed as a greenish shimmering insect with sparkling gold eyes and transparent wings that look as fragile as glass. Within the watershed, 11 species of neuropterans in 6 families have been identified.

Order Coleoptera. This order includes the beetles and weevils. The extraordinary variety in their forms has made the beetles the insect order with by far the greatest number of species. In Old Woman Creek watershed 178 species of beetles in 39 families have been reported. This is a small number, however, compared with the nearly 350,000 species of beetles that have been described world wide. The name of the order means sheathed wings, referring to the hardened forewings that cover the membranous hindwings. Most beetles are herbivorous, but some families that live in Old Woman Creek and the estuary are hunters, such as the predaceous diving beetles (*Dytiscus* and *Laccophilus*), while other water beetles are scavengers (*Berosus* and *Hydrophilus*). Most of the beetle families are terrestrial and have the ability to fly, but most often only to reach low vegetation. Land beetles eat leaves, bark, dung, and some textiles. The larvae, called grubs, can be either predacious or vegetarians. Although some species attack plants and food stores, others eat plant pests and pollinate flowers.

Orders Mecoptera and Siphonaptera. These orders include the scorpionflies and fleas. The slender bodies of scorpionflies are amber-colored with dark spots or bands on their four membranous wings. The common name for these insects is derived from the male genitalia which looks like the upward curved sting organ of a scorpion. The common scorpionfly, *Panorpa helena*, occurs in the watershed and inhabits woods and ravines with dense vegetation. They feed chiefly on dead or injured insects.

Fleas are small wingless insects that feed on the blood of birds and mammals. The genus *Ctenocephalides* includes the cat flea (*C. felis*) and the dog flea (*C. canis*) that are common pests of cats and dogs in the watershed and also occur in buildings where these domestic animals are kept. The dog flea serves as the intermediate host of the dog tapeworm (*Dipylidium caninum*).

Order Diptera. This order includes the true flies. Common in all habitats, flies are easily distinguished from other insects because they only have one pair of complete wings. Most flies have large compound eyes and mouthparts that are modified for piercing, lapping, or sucking. The larvae, called maggots, of many species are soft, legless, headless, and often white. The aquatic larvae of mosquitoes (*Aedes* and *Culex*), midges (*Chironomus* and *Procladius*), and crane flies (*Tipula*), found in the estuary, are slender and have distinct heads. Many of the chironomid larvae are blood red in color. These "bloodworms" have hemoglobin in their circulatory system that allows them to store oxygen and survive at near anoxic conditions. A total of 126 species of flies, in 38 families, have been identified within the study area, 54 species of which are in the midge family (Chironomidae).

Order Trichoptera. This order includes the caddisflies. Trichopterans are an advanced order of insects, closely related to the order Lepidoptera (butterflies and moths), but adapted for aquatic life in the immature stages. Adult caddisflies are similar to moths except their wings usually possess hairs rather than the scales typical of moth wings. Caddisflies are usually brownish, inconspicuous, small, and moth-like insects that are most active at night. Like mayflies, the adults have reduced mouthparts and seldom, if ever, eat. The head and thorax of the aquatic larvae are sclerotized and pigmented, while the abdomen is soft and color light brown to a brilliant green. Their 3 pairs of legs are prominent and directed forward. Many larvae construct portable cases of various natural objects, such as grains of sand and gravel, leaves, or twigs, which are fastened together with a gluelike substance or with silk. Larval cases vary considerably, both in shape and in the materials employed, but each species makes a characteristic type of case, including tube-makers (*Polycentropus*), log-cabin makers (*Limnephilus*), and sailcase makers (*Helicopsyche*). Larvae of some species construct silken nets (*Hydropsyche*) and feed on material caught in the nets. Most larvae feed on plant material, but a few non-case makers (*Rhyacophila* and *Phryganea*) are predaceous. Within the estuary and adjacent streams tributary to Lake Erie, a total of 65 species of caddisflies, in 9 families, have been identified.

Order Lepidoptera. This order includes the butterflies and moths. As noted earlier, these insects have 4 large membranous wings that are covered with scales. When handled some of these scales easily rub off. Moths and butterflies are separated on the basis of certain head structures, while individual families are further divided on the basis of wing venation. Moths have threadlike or plumose antennae and a bristle (frenulum) at the front base of the hind wing, whereas butterflies have knobbed antennae and lack a frenulum. Lepidopterans feed principally on nectar and other

liquid foods, and are commonly associated with flowers. Their flight is somewhat erratic, but relatively fast. A few butterflies, such as the monarch (*Danaus plexippus*), migrate great distances. The larvae of this particular species feeds on milkweed. Lepidopteran larvae, commonly called caterpillars, are cylindrical in shape with well developed heads, 3 pairs of thorax legs, and 5 pairs of abdominal prolegs. Many larvae pupate in silken cocoons. A total of 83 moths and butterflies, in 25 families, have been found in the watershed.

Order Hymenoptera. This order includes the ants, bees, and wasps. From a human standpoint, this order is regarded as the most beneficial of all the insects, for it contains food producers (honeybees), plant pollinators, and parasites or predators of various insect pests. The insects in this order also exhibit a great diversity of habits and complexity of behavior culminating in elaborate social organizations. The winged members have four membranous wings, with the hindwing smaller than the forewing. In flight, a tiny set of hooks are employed to attach the two sets of wings together. Ants, bees, and wasps have a constricted "waist" or pedicel between the thorax and the abdomen, whereas sawflies and horntails (*Tremex*) do not. Larvae have well-developed heads and mouthparts, but are legless except for sawflies. Most species are solitary, but ants and some bees and wasps have a complex social organization with sterile workers. Investigators have identified 52 species of hymenopterans, in 21 families, within the Old Woman Creek watershed.

PHYLUM TARDIGRADA

Tardigrades, or water bears, are near microscopic animals that live in the film of water surrounding mosses, algae, and rooted aquatic plants. The body has a somewhat bear-like appearance and consists of a distinct head and trunk with four pairs of leg-like projections, each bearing four claws. They crawl over vegetation, using their claws to grasp, while they feed on algal filaments and plant leaflets by sucking out cellular fluids. The tardigrades collected in the estuary belong to the family Macrobiotidae.

PHYLUM BRYOZOA

Bryozoans are aquatic animals that occur in colonies. The individual animals (zooids) grow in a non-living case. They have a unique tentacular food collecting organ called the lophophore. In the estuary, *Pectinatella magnifica* creates massive gelatinous colonies, *Plumatella casmiana* forms more honeycomb masses, *Lophopodella carteri* is found in small sac-like masses, and *Plumatella repens* occurs in branching and threadlike colonies. Called "moss animals" bryozoan colonies often look like mossy masses on lily pads or encrustation on floating twigs and branches. When the colonies disintegrate in the fall, most species produce a large number of oval winter buds (statoblasts). Similar to the gemmules of a sponge, individuals produced from these buds form new colonies in the spring.

CATALOGUE

This catalogue comprises Contribution No. 3 to the Reserve Site Profile and contains a listing of all the known invertebrate animals in the environs of Old Woman Creek estuary and in its watershed. The diversity of habitats present within the Reserve, Old Woman Creek watershed, and the adjacent nearshore waters of Lake Erie contribute to a variety of plant and animal communities—each comprised of a distinctive invertebrate fauna. A total of 318 protozoan, 4 sponge and hydroid, 7 flatworm and gastrotrich, 34 rotifer, 3 nematode, 33 mollusk, 46 annelid worm and leech, 77 spider and water mite, 83 crustacean, 741 insect, and 6 tardigrade and bryozoan species have been identified in the Reserve, watershed, and adjacent tributaries and waters of Lake Erie; nearly 60% of these taxa are found within the boundaries of the Reserve.

This catalogue consists of four appendices. Appendix A contains of a complete phylogenetic (evolutionary relationship) listing of all the invertebrate taxa identified in Old Woman Creek estuary and watershed, and adjacent tributaries and waters of Lake Erie. Elements of the list include: (1) taxonomic classification, (2) scientific name, (3) describer (author of scientific name), and (4) common name, as well as codes for (5) data sources, (6) locations within the study area, and (7) habitat preferences. The data for this appendix were compiled from publications and reports prepared by some 35 scientists and naturalists who have conducted research in the Reserve, watershed, and environs. The individual source documents are cited at the end of Appendix A.

Appendix B is a checklist of the invertebrates in the study area, also arranged phylogenetically by phylum, class, and order, but abbreviated to include only the scientific name, common name, family, and general location (e.g. estuary, Old Woman Creek above the estuary, Lake Erie, and adjacent tributaries). Appendix C consists of an alphabetized list, by scientific name, of all the invertebrates known for the study area, followed by the common name, phylum, and general locations for each species. Appendix D is a similar list, but alphabetized by common name, followed by the scientific name, phylum, and general locations for each species. In general, arrangement of classes, orders, families, and subfamilies follows the classification synopsis of Parker (1982). Data sources, references, and keys for codes designations are given at the end of appropriate appendices.

• <i>Limnodrilus profundicola</i> (Verrill, 1871) Birnkhurst, 1965 * tubificid worm	9	ES	LEB
• <i>Limnodrilus udekemianus</i> Claparède, 1862 * tubificid worm	9	ES	LEB
• <i>Quistadrilus multisetosus</i> Smith, 1900 * tubificid worm	9	ES	LEB
• <i>Rhyacodrilus coccineus</i> (Vejdovsky, 1875) * tubificid worm	9	ES	LEB
• <i>Telmatodrilus</i> sp.? Eisen, 1879 * tubificid worm	9	ES	LEB
*tubificid sp. * tubificid worm	12	ES	LEB
Family Naididae			
• <i>Amphichaeta leydigii</i> Tauber, 1879 * naidid worm	9	ES	LEB
• <i>Chaetogaster diaphanus</i> Gruithuisen, 1828 * naidid worm	9	ES	LEB
• <i>Chaetogaster diastrophus?</i> Gruithuisen, 1828 * naidid worm	9	ES	LEB
• <i>Chaetogaster limnaei</i> Von Baer, 1827 * naidid worm	9	ES	LEB
• <i>Dero nivea</i> Aiyer, 1929 * naidid worm	9	ES	LEB, VES
• <i>Dero trifida?</i> Loden, 1979 * naidid worm	9	ES	LEB
• <i>Dero vaga</i> Leidy, 1880 [= <i>Auloporus vaga</i>] * naidid worm	9	ES	LEB
• <i>Haemonais waldvogeli</i> Bretscher, 1900 * naidid worm	9	ES	LEB
• <i>Nais barbata</i> Müller, 1873 * naidid worm	9	ES	LEB
• <i>Nais communis</i> Piguet, 1909 * naidid worm	9	ES	LEB, VES
• <i>Nais elinguis</i> Müller, 1773 * naidid worm	9	ES	LEB, VES
• <i>Nais pardalis</i> Piguet, 1906 * naidid worm	9	ES	LEB, VES
• <i>Nais pseudobtusa</i> Piguet, 1906 * naidid worm	9	ES	LEB
• <i>Nais variabilis</i> Piguet, 1906 * naidid worm	9	ES	LEB, VES
• <i>Ophidonais serpentina</i> (Müller, 1773) Gervais, 1938 * naidid worm	9	ES	LEB
• <i>Pristina longiseta longiseta</i> Ehrenberg, 1828 * naidid worm	9	ES	LEB
• <i>Pristina sima?</i> (Marcus, 1944) Sperber, 1948 * naidid worm	9	ES	LEB
• <i>Pristinella acuminata?</i> Liang, 1958 * naidid worm	9	ES	LEB
• <i>Pristinella jenkinae</i> (Stephenson, 1931) * naidid worm	9	ES	LEB
• <i>Pristinaella osborni</i> (Walton, 1906) * naidid worm	9	ES	LEB
• <i>Vejdovskyella comata</i> (Vejdovsky, 1883) Michaelsen, 1903 * naidid worm	9	ES	LEB
• <i>Vejdovskyella intermedia</i> (Bretscher, 1896) Piguet, 1928 * naidid worm	9	ES	LEB
Family Aeolosomatidae			
• <i>Aeolosoma headleyi</i> Beddard, 1888 * aquatic earthworm	9	ES	LEB
• <i>Aeolosoma hemprichi</i> Ehrenberg, 1831 * aquatic earthworm	9	ES	LEB

PHYLUM ARTHROPODA (joint-legged animals)
CLASS ARACHNIDA (terrestrial chelicerates)

ORDER ARANEAE (spiders)

Family Pholcidae (long-legged spiders)

- *Pholcus phalangioides* (Fuesslin) Emerton, 1882 * cellar spider
 - Family Theridiidae (comb-footed or cobweb spiders)**
 - *Achaearanea tepidariorum* (Koch) Levi, 1955

* American house spider

- *American house spider*
 - *Crustulina altera* Gertsch & Archer * comb-footed spider
 - *Steatoda borealis* (Hentz) Emerton, 1882 * comb-footed spider

• *Steatoda triangulosa* (Walckenaer) Emerton, 1886

- *Theridion frondeum* Hentz, 1850 * comb-footed spider
 - Family Linyphiidae (sheet-web weavers)**
 - *Atenocyrta cornuta* (Cambridge, 1875) * sheet web weaver

- *Atopogyna cornupalis* (Cambridge, 1875) * sheath web weaver
- *Bathyphantes* sp. 3. Monga : sheet web weaver

- *Bathyphantes* sp.? Menge * sheet-web weaver
 - *Ceraticelus fissiceps* (Cambridge) * dwarf spider
 - *Frontinella pyramitela* (Walckenaer) * sheet-web weaver
 - *Lepthyphantes zebra* (Emerton, 1882) Zorsch, 1937 * s-w w.
 - *Meioneta unimaculata* (Banks, 1892) Comstock, 1912 * s-w w.
 - *Neriene radiata?* van Heislinger, 1969 [or *Microlin* sp.] * s-w w.
 - *Pityohyphantes costatus* (Hentz, 1850) Chamberlin & Ivie, 1943
* hammock spider

Family Araneidae (orb weavers)

- *Araneus marmoreus* Clerck, 1757 * marbled orb weaver
 - *Araneus trifolium* (Hentz) * orb weaver
 - *Argiope aurantia* Lucas, 1833 * black & yellow garden spider
 - *Argiope trifasciata* (Forskål, 1775) Levi, 1968 * banded garden spider
 - *Cyclosa conica* (Pallus, 1772) Emerton, 1884 * orb weaver
 - *Eustala anastera* (Walckenaer, 1841) Comstock, 1912 * orb weaver
 - *Gea heptagon* (Hentz) * orb weaver
 - *Mangora placida* (Hentz, 1847) Comstock, 1912 * orb weaver
 - *Micrathena gracilis* (Walckenaer) * orb weaver
 - *Neoscona crucifera* (Lucas) * orb weaver
 - *Verrucosa arenata* (Walckenaer) * orb weaver

Family Mimetidae (ambush spiders)

- *Ero canionis* Chamberlin * ambush spider

Family Tetragnathidae (large-jawed orb weavers)

- *Tetragnatha elongata* Walckenaer, 1805 * stilt-legged spider
 - *Tetragnatha laboriosa* Hentz * long-jawed orb weaver

Family Agelenidae (funnel-web weavers)

- *Agelenopsis pennsylvanica*. (Koch) * grass spider
 - *Cirurina robusta* Simon, 1886 * funnel-web weaver
 - *Coras medicinalis* (Hentz, 1821) Comstock, 1912 * f-w. weaver

Family Amaurobiidae (thread-web weavers)

- *Callobius* sp.? Chamberlin * thread-web weaver

Family Dictynidae (loose-web weavers)

 - *Cicurina pallida* Keyserling * loose-web weaver

• *Dictynia annulipes* (Blackwell, 1846) Chamberlin

- ## **Family Anyphaenidae (hunting spiders)**

• *Anyphaena celer* (Hentz 1847) Simon 1897

- Anhyphnaea celer* (Meytz, 1847) Simon, 1897 + Hunting spider
A-15

- *Alona cf. circumfimbriata* Megard, 1967 * water flea
- *Alona costata* Sars, 1862 * water flea
- *Alona guttata* Sars, 1862 * water flea
- *Alona quadrangularis* Müller, 1785 * water flea
- *Alonella excisa* (Fischer, 1854) * water flea
[or *Alonella exigua?* Lilljeborg, 1853] * water flea
- *Alonella hamulata* (Birge) * water flea
- *Alonella nana* (Baird, 1850) * water flea
- *Alonella setulosa* (Megard, 1967) * water flea
- *Chydorus sphaericus* (Müller, 1785) * water flea
- *Chydorus* sp. Leach, 1843 * water flea
- *Disparalona leei* (Chien) * water flea
- *Leydigia acanthocercoides* (Fischer, 1854) * water flea
- *Leydigia leydi* (Schødler, 1863) * water flea
- *Pleuroxus cf. denticulatus* Birge, 1878 * water flea
- *Pleuroxus procurvus* Birge, 1878 * water flea
- *Pseudochydorus globosus* (Baird, 1850) * water flea

Family Macrothricidae

- *Ilyocryptus sordidus* (Lieven, 1848) * water flea
- *Macrothrix laticornis* (Jurine, 1820) * water flea

Family Moinidae

- *Moina micrura* Kurz, 1874 * water flea

	SOURCE	LOCATION	HABITAT
Suborder Ctenopoda			
Family Sididae			
• <i>Diaphanosoma birgei</i> Korinek, 1981 * water flea	2,6,7,8	CK,ES,LE	LEP
• <i>Latona setifera</i> (Müller, 1785) * water flea	9	ES	LEB
• <i>Sida crystallina</i> (Müller, 1785) * water flea	8,17	ES	LEP
Suborder Haplopoda			
Family Leptodoridae			
• <i>Leptodora kindtii</i> (Focke, 1844) * large water flea	6,7,17	LE	LEP
Suborder Onychopoda			
Family Cercopagidae			
• <i>Bythotrephes cederstroemi</i> Schödler, 1877 * spiny water flea	16	LE	LKP

Subclass Ostracoda (seed shrimps)

ORDER PODOCOPINA

Family Darwinulidae

- *Darwinula stevensoni* (Brady & Robertson, 1870) * seed shrimp

Family Candonidae

- *Candonia simpsoni* Sharpe, 1897 * seed shrimp

Family Cyprididae

- *Cypris maculata* Hoff, 1942 * seed shrimp

- *Cypris ophthalmica* (Jurine, 1820) * seed shrimp

- *Cypris pellucida* Sars, 1901 * seed shrimp

- *Cypris* sp. Zenker, 1854 * seed shrimp

- *Physocypria pustulosa* Sharpe, 1897 * seed shrimp

Family Cypridopsidae

- *Cypridopsis vidua* (Müller, 1776) * seed shrimp

Family Ilyocypriidae

- *Pelocypris* sp. Klie, 1931 * seed shrimp

Subclass Copepoda (copepods)

ORDER CALANOIDA

Family Temoridae

- *Epischura lacustris* Forbes, 1882 * copepod

- *Eurytemora affinis* (Poppe, 1880) * copepod

Family Diaptomidae

- *Diaptomus* sp. Westwood * copepod

- *Leptodiaptomus ashlandi* (Marsh, 1893) * copepod

- *Leptodiaptomus minutus* (Lilljeborg, 1889) * copepod

- *Leptodiaptomus sicilis* (Forbes, 1882) * copepod

- *Leptodiaptomus sicloides* (Lilljeborg, 1889) * copepod

- *Skistodiaptomus oregonensis* (Lilljeborg, 1889) * copepod

- *Skistodiaptomus pallidus* (Herrick, 1879) * copepod

- *Skistodiaptomus* sp. (Lilljeborg, 1889) * copepod

ORDER HARPACTICOIDA

Family Canthocamptidae

- *Attheyella illinoiensis* (Forbes, 1882) * copepod

- *Bryocamptus* sp. Chappuis, 1927 * copepod

- *Canthocamptus robertcokeri* Wilson, 1958 * copepod

- *Nitocra hibernica* (Brady, 1880) * copepod

- *Nitocra* sp. (Brady, 1880) * copepod

- *Paracanthocamptus* sp. (Brady, 1880) * copepod

	SOURCE	LOCATION	HABITAT
• <i>Diacyclops thomasi</i> (Forbes, 1882) * copepod	2,6,7,8,9	CK,ES,LE	LEB,LEP
• <i>Eucyclops agilis</i> (Koch, 1838) * copepod	7,9	ES,LE	LEB,LEP,VES
• <i>Eucyclops elegans</i> (Lilljeborg, 1901) [= <i>E. speratus</i>] * copepod	2,8,9	ES	LEB,LEP
• <i>Macrocylops albidus</i> (Jurine, 1820) * copepod	7,8,9	ES	LEB,LEP
• <i>Mesocyclops edax</i> (Forbes, 1891) * copepod	2,6,7,8,9	CK,ES,LE	LEB,LEP
• <i>Microcyclops varicans rubellus</i> (Lilljeborg, 1901) * copepod	9	ES	LEB
• <i>Paracyclops fimbriatus poppei</i> (Rehberg, 1880) * copepod	2,8,9	ES	LEB,LEP
• <i>Tropocyclops prasinus mexicanus</i> Kiefer, 1938 * copepod	6,7,8,9	CK,ES,LE	LEB,LEP

Subclass Branchiura

ORDER ARGULOIDA

Family Argulidae (fish lice)

• <i>Argulus</i> sp. Müller * fish louse	7	ES	LEP
--	---	----	-----

Subclass Malacostraca

ORDER ISOPODA (sowbugs)

Family Asellidae (aquatic sowbugs)

• <i>Asellus</i> sp. Geoffroy [= <i>Caecidotea</i> sp.] * aquatic sowbug	17	ES	LEB
• <i>Caecidotea racovitzai racovitzai</i> (Williams, 1970) * aquatic sowbug	9	ES	LEB

ORDER AMPHIPODA (scuds or sideswimmers)

Family Gammaridae

• <i>Crangonyx gracilis</i> Smith * sideswimmer	17	ES	LEB
• <i>Gammarus fasciatus</i> Say * sideswimmer	9,12	ES	LEB
• <i>Gammarus pseudolimnaeus</i> Bousfield * sideswimmer	17	ES	LEB

Family Talitridae

• <i>Halella azteca</i> Saussure * sideswimmer	6,9	ES	LEB
--	-----	----	-----

ORDER DECAPODA (crayfishes & shrimps)

Infraorder Caridae (shrimps)

Family Palaemonidae (freshwater prawns)

• <i>Palaemonetes kadiakensis</i> Rathbun, 1902 * Mississippi glass shrimp	9,17b	ES	LEB,VES
---	-------	----	---------

Infraorder Asacidea

Family Cambaridae (crayfishes)

• <i>Cambarus diogones</i> Girard, 1852 * devil crayfish	17	ES	LEB
• <i>Orconectes rusticus</i> (Girard, 1852) * rusty crayfish	17	ES	LEB

CLASS INSECTA [=HEXAPODA] (insects & allies)

Subclass Entognatha (diplurans & springtails)

ORDER COLLEMBOLA (springtails)

Family Entomobryidae (entomobryids)

• entomobryid spp. [2] * springtails	9,15	CK,ES	LEB,LEP,UWD
--------------------------------------	------	-------	-------------

Family Isotomidae (isotomids)

• isotomid sp. * springtail	9	ES	LEB,LEP
-----------------------------	---	----	---------

ORDER DIPLURA (diplurans)

Family Campodeidae

• dipluran sp. * dipluran	15	CK	UWD
---------------------------	----	----	-----

Subclass Ectognatha (true insects)

ORDER THYSANURA (bristletails)

Family Lepismatidae (silverfish)

• lepismatid sp. * silverfish	15	CK	UWD,RUL
-------------------------------	----	----	---------

ORDER EPHEMEROPTERA (mayflies)
Suborder Schistonota (splitback mayflies)

Family Baetidae (small minnow mayflies)

- *Baetis* sp. Leach, 1815 * bluewing olive
- baetid sp. * small minnow mayfly

Family Oligoneuriidae (brushlegged mayflies)

- *Isonychia sicca* (Walsh, 1862) * brushlegged mayfly
- *Isonychia* sp. Eaton, 1871 * brushlegged mayfly

Family Heptageniidae (stream or flatheaded mayflies)

- *Heptagenia pulla* Clemens, 1913 * graywing olive
- *Heptagenia* sp. Walsh, 1863 * flatheaded mayfly
- *Stenacron* sp. (Traver) Jensen, 1974 * yellow may
- *Stenonema femoratum* (Say, 1823) * pale red fox
- *Stenonema* sp. Traver, 1933 * flatheaded mayfly or yellow may

Family Leptophlebiidae (pronggills)

- *Leptophlebia* sp. Westwood, 1840 * pronggill mayfly

Family Polymitarcyidae (pale burrowers)

- *Ephoron* sp. Williamson, 1802 * pale burrowing mayfly

Family Ephemeridae (common burrowers)

- *Ephemera* sp. Linnaeus, 1758 * burrowing mayfly
- *Hexagenia limbata* (Serville, 1829) * burrowing mayfly
- *Hexagenia* spp. Walsh, 1863 * burrowing mayflies

Suborder Pannota (fusedback mayflies)

Family Ephemerellidae (spiny crawlers)

- *Ephemerella* sp. Walsh, 1862 * spiny crawler

Family Caenidae (small squaregills)

- *Caenis simulans* McDunnough, 1931 * squaregill mayfly
- *Caenis* sp. Stephens, 1835 * squaregill mayfly

ORDER ODONATA (damselflies & dragonflies)

Suborder Zygoptera (damselflies)

Family Lestidae (spread-winged damselflies)

- *Lestes forcipatus* Rambur, 1842 * marsh spreadwing
- *Lestes* sp. Leach, 1815 * spreadwing

Family Coenagrionidae (narrow-winged damselflies or bluets)

- *Argia fumipennis* Burmeister * dancer
- *Argia meosta* (Hagen, 1861) * dancer
- *Argia apicalis* Say, 1839 * dancer
- *Argia tibialis* Ranbur, 1842 * dancer
- *Argia translata* Hagen, 1865* dancer
- *Argia violacea* (Hagen, 1861) * purple damselfly or violet dancer
- *Argia* sp. Rambur, 1842 * dancer
- *Chromagrion* sp. Needham, 1839 * variegated damsel
- *Enallagma antennatum* (Say, 1839) * bluet
- *Enallagma civile* (Hagen, 1861) * civil bluet
- *Enallagma exsulans* Hagen, 1861 * bluet
- *Enallagma signatum* Hagen, 1861 * bluet
- *Enallagma vespertum* Calvert, 1913 * bluet
- *Enallagma* sp. Charpentier, 1840 * bluet
- *Ischnura posita* (Hagen, 1861) * forktail
- *Ischnura verticalis* (Say, 1839) * forktail
- *Ischnura* sp. Charpentier, 1840 * forktail

	SOURCE	LOCATION	HABITAT
Family Coenagrionidae (continued)			
• <i>Nehalennia irene</i> Hagen, 1861 * green damsel	14	ES	LKS
• coenagrionid sp. * narrow-winged damselfly	15,17a	ES	UWD
Family Calopterygidae (broad-winged damselflies)			
• <i>Calopteryx maculata</i> (Beauvais, 1805) [= <i>Agrion maculatus</i>] * blackwinged damselfly	3,14,15,17a	CK,TR	RAV,UWD
• <i>Calopteryx</i> sp. Leach, 1815 * bandwing damselfly	17a	ES	LEB,UWD
• <i>Hetaerina americana</i> (Fabricius, 1798) * American ruby spot	17a	ES	UWD
• calopterygid sp. * broad-winged damselfly	17a	ES	UWD
Suborder Anisoptera (dragonflies)			
Family Gomphidae (clubtails)			
• <i>Dromogomphus spoliatus</i> Hagen, 1857 * spinylegged clubtail	17a	TR	STM
• <i>Dromogomphus spinosus</i> Sely, 1854 * spinylegged clubtail	17a	TR	STM
• <i>Hagenius brevistylus</i> Sely, 1854 * black dragonfly	17a	TR	STM
Family Aeshnidae (darner)			
• <i>Anax junius</i> (Drury, 1770) * big green darner	3,14,15,17a	ES,CK	OGS,UWD
• <i>Aeshna</i> sp. Fabricuis, 1775 * blue darner or paddletail	17a	ES	LEB
Family Corduliidae (green-eyed skimmer)			
• <i>Epitheca princeps</i> (Hagen, 1861) * royal skimmer	14	ES	WET
• corduliid sp. * emerald dragonfly	15	CK	UWD
Family Libellulidae (common skimmers)			
• <i>Celithemis elisa</i> Hagen, 1861 * spotted skimmer or calico pennant	14,15	CK,TR	UWD,WET
• <i>Erythemis simplicicollis</i> (Say, 1839) * eastern pondhawk	3,14,15,17a	CK,ES,TR	OGS,UWD,WET
• <i>Leucorrhinia</i> sp. Brittinger, 1850 * whitefaced skimmer	9	ES	LEB
• <i>Libellula luctuosa</i> Burmeister, 1839 * widow dragonfly	3,14,15,17a	CK,TR	LKS,UWD,STM
• <i>Libellula pulchella</i> Drury, 1773 * tenspot dragonfly	3,15,17a	CK,ES	STM,WET
• <i>Libellula</i> sp. Linnaeus, 1758 * skimmer dragonfly	17a	ES	WET
• <i>Pachydiplax longipennis</i> (Burmeister, 1839) * blue pirate	14	ES	WET
• <i>Pantala flavescens</i> (Fabricius, 1798) * yellow skimmer	17a	TR	STM
• <i>Pantala hymenea</i> (Say, 1839) * globe skimmer	3,14,17a	CK,ES,TR	LEB,LKS,STM
• <i>Perithemis tenera</i> (Say, 1839) * eastern amber-winged skimmer	14,15,17a	CK,ES,TR	STM,WET
• <i>Plathemis lydia</i> (Drury, 1770) * common white-tailed skimmer	3,15,17a	CK,TR	STM
• <i>Sympetrum semicinctum</i> Say, 1839 * red skimmer	14	TR	WET
• <i>Sympetrum rubicundulum</i> Say, 1839 * red skimmer	17a	TR	STM
• <i>Tramea lacerata</i> Hagen, 1861 * raggedy skimmer	14	TR	WET
• <i>Tramea onusta</i> Hagen, 1861 * red saddlebags dragonfly	15	CK	STM
Family Macromiidae (belted & river skimmers)			
• <i>Macromia illinoiensis</i> Walsh, 1862 * river skimmer	17a	TR	STM
• <i>Macromia taeniolata</i> Rambur, 1842 * river skimmer	17a	TR	STM
ORDER BLATTARIA (cockroaches)			
Family Blattidae (common cockroaches)			
• <i>Blatta orientalis</i> ? Linnaeus * Oriental cockroach	15	CK	UWD
• <i>Periplaneta americana</i> ? (Linnaeus) * American cockroach	15	CK	UWD
Family Blattellidae (small cockroaches)			
• <i>Parcoblatta</i> sp.? (De Geer) * wood cockroach	15	CK	UWD
ORDER MANTODEA (mantids)			
Family Mantidae (praying mantids)			
• <i>Tenodera aridifolia sinensis</i> Saussure * Chinese mantid or praying mantis	15,17	CK,TR	RUL,UWD

ORDER ISOPTERA (termites)
Family Rhinotermitidae

- *Reticulitermes flavipes* (Kollar) * eastern subterranean termite

ORDER ORTHOPTERA (crickets & grasshoppers)
Suborder Ensifera (crickets)
Family Gryllacrididae (camel crickets)

- *Ceuthophilus* sp. Scudder * camel or cave cricket

Family Tettigoniidae (katydids)

- *Microcentrum rhombifolium* (Saussure, 1859)

* broad-winged katydid

- *Pterophylla camellifolia* (Fabricius, 1775) * northern katydid

Family Gryllotalpidae (mole crickets)

- *Neocurtilla hexadactyla* (Perty, 1832) * northern mole cricket

- *Neocurtilla* sp. Kirby * mole cricket

Family Gryllidae (true crickets)

- *Gryllus* sp. Linnaeus * field cricket

- gryllid sp. * tree cricket

Suborder Caelifera (grasshoppers)
Family Acrididae (short-horned grasshoppers)

- acridid sp. * eastern lubber grasshopper

- cyrtacanthacridin sp. * spur-throated grasshopper

- oedipidin sp. * band-winged grasshopper

Family Tetrigidae (pygmy grasshoppers)

- *Nomotettix cristatus* (Scudder, 1863) * pygmy grasshopper

- *Paratettix cucullatus* (Burmeister, 1838) * pygmy grasshopper

- tetrigid sp. * pygmy grasshopper

Family Tridactylidae (pygmy mole crickets)

- *Ellipes minuta minuta* (Scudder, 1863) * pygmy mole cricket

- tridactylid sp. * pygmy mole cricket

ORDER DERMAPTERA (earwigs)
Family Labiduridae

- *Euborellia annulipes?* (Lucas, 1847) * ring-legged earwig

Family Labiidae

- *Labia* sp.? Leach * little earwig

Family Forficulidae

- *Forficula auricularia?* Linnaeus, 1758 * European earwig

- forficulid sp. * earwig

ORDER PLECOPTERA (stoneflies)
Family Nemouridae (nemourid broadbacks)

- nemourid sp. * broadback stonefly

Family Capniidae (slender winter stoneflies)

- *Allocapnia recta* Claassen * spring stonefly

- *Allocapnia vivipara* Claassen * spring stonefly

- capniid sp. * winter stonefly

Family Taeniopterygida (taeniopterygid broadbacks)

- taeniopterygid sp. * broadback stonefly

Family Perlidae (common stoneflies)

- *Acroneuria* sp.? Pictet, 1841 * stonefly

- *Neoperla* sp. Needham, 1905 * stonefly

- *Neophasganophora* sp.? Lestage, 1922 * great stonefly

- *Paragnetina* sp.? Klapalek, 1907 * stonefly

Family Phlaeothripidae (three-tailed thrips)			
• phlaeothripid sp. * mullin thrips	15	CK	LWD
ORDER HEMIPTERA (true bugs)			
Family Nepidae (water scorpions)			
• <i>Nepa</i> sp. Linnaeus, 1758 * oval water scorpion	17a	TR	STM
• <i>Ranatra fusca</i> Palisot de Beauvis, 1805 * water scorpion	10	ES	LEB
• <i>Ranatra nigra</i> Herrich-Schaffer, 1853 * water scorpion	10	ES	LEB
• <i>Ranatrasp.</i> Fabricius, 1790 * sticklike water scorpion	10,17a	ES,TR	LEB,STM
Family Belostomatidae (giant water bugs)			
• <i>Belostoma flumineum</i> Say, 1831 * giant water bug	10	ES	LEB
• <i>Belostoma</i> sp. Latreille, 1807 * giant water bug	9	ES	LEB,VES
Family Corixidae (water boatmen)			
• <i>Corisella inscripta</i> (Uhler, 1894) * water boatman	10	ES	LEB
• <i>Hesperocorixa lucida</i> (Abbott, 1916) * water boatman	10	ES	LEB
• <i>Hesperocorixa</i> sp. Kirkaldy, 1908 * water boatman	17a	TR	STM
• <i>Palmarcorixa buenoi</i> Abbott, 1913 * water boatman	10	ES	LEB
• <i>Palmarcorixa nana</i> Walley, 1936 * water boatman	10	ES	LEB
• <i>Palmarcorixa</i> sp. Abbott, 1912 * water boatman	9,10	ES	LEB
• <i>Sigara alternata</i> (Say, 1832) * water boatman	10	ES	LEB
• <i>Sigara modesta</i> (Abbott, 1916) * water boatman	10	ES	LEB
• <i>Sigara</i> sp. Fabricius, 1775 * water boatman	9,17a	CK,ES,TR	LEB,STM,VES
• <i>Trichocorixa calva</i> (Say, 1832) * water boatman	10	ES	LEB
• <i>Trichocorixa kanza</i> Saller, 1948 * water boatman	10	ES	LEB
• <i>Trichocorixa</i> sp. Kirkaldy, 1908 * water boatman	3,9,17,17a	CK,ES	LEB,VES,STM
• corixid sp. * water boatman	15	CK	STM
Family Gelastocoridae (toad bugs)			
• <i>Gelastocoris</i> sp. Kirkaldy, 1897 * toad bug	17a	TR	STM
• gelastocorid sp. * toad bug	15	CK	STM
Family Naucoridae (creeping water bugs)			
• <i>Pelocoris</i> sp. Stål, 1876 * creeping water bug	8,17	ES	LEB
Family Notonectidae (backswimmers)			
• <i>Notonecta irrorata</i> Uhler, 1879 * backswimmer	10	ES	LEP
• <i>Notonecta raleighi lunata</i> Hungerford, 1926 * backswimmer	10	ES	LEP
• <i>Notonecta undulata</i> Say, 1832 * backswimmer	9,10	ES	LEP
• notonectid sp. * backswimmer	15	CK	STM

	SOURCE	LOCATION	HABITAT
Family Mesoveliidae (water treaders)			
• <i>Mesovelia mulsanti</i> White, 1879 * water treader	10	ES	LEP
• <i>Mesovelia</i> sp. Mulsant & Rey, 1852 * water treader	9	ES	LEP
Family Hydrometridae (water measurers)			
• <i>Hydrometra martini</i> Kirkaldy, 1900 * water measurer	10	ES	LEB
• <i>Hydrometra</i> sp. Lamarck, 1807 * water measurer	17a	CK	STM
Family Hebridae (velvet water bugs)			
• <i>Merragatas</i> sp. White, 1877 * velvet water bug	17a	TR	STM
• hebrid sp. * velvet water bug	15	CK	STM
Family Veliidae (small water striders)			
• <i>Microvelia</i> sp. Westwood, 1834 * small water strider	3,17a	CK,TR	STM
• <i>Rhagovelia</i> sp. Mayr, 1865 * small water strider	3,17a	CK,TR	STM
Family Gerridae (water striders)			
• <i>Aquarius</i> sp. Schellenberg * water strider	17a	TR	STM
• <i>Gerris buenoi</i> Kirkaldy, 1911 * water strider	10	ES	LEP
• <i>Gerris canaliculatus</i> Say, 1831 * water strider	17	ES	LEP
• <i>Gerris comatus</i> Drake & Hottes, 1925 * water strider	10	ES	LEP
• <i>Gerris marginatus</i> Say, 1832 * water strider	10	ES	LEP
• <i>Gerris remigis</i> Say, 1832 * water strider	17a	ES	LEP
• <i>Gerris</i> sp. Fabricius, 1794 * water strider	3,9,15,17a	CK,ES	LEP,STM
• <i>Metrobates hesperius</i> Uhler, 1871 * water strider	17a	TR	STM
• <i>Metrobates</i> sp. Uhler, 1871 * riffle water strider	3,17a	CK,ES,TR	LEP,STM
• <i>Rheumatobates</i> sp. Bergroth, 1892 * water strider	17a	TR	STM
• <i>Trepobates</i> sp. Uhler, 1894 * water strider	3,9,15,17a	CK,ES,TR	LEP,STM,VES
Family Saldidae (shore bugs)			
• <i>Micracanthia</i> sp. Reuter, 1912 * shore bug	3,17a	CK,ES	LKS,STM
Family Tingidae (lace bugs)			
• <i>Corythucha pruni</i> Osborn & Drake * lace bug	15	CK	UWD
• tingid sp. * lace bug	17a	ES	UWD
Family Miridae (leaf or plant bugs)			
• <i>Leptoptera dolabrata</i> (Linnaeus) * meadowplant bug	15	CK	UWD
• <i>Lygus lineolaris?</i> (Beauvois) * tarnished plant bug	15	CK	UWD
• <i>Pecilocapsus lineatus</i> Fabricius* four-lined leaf bug	15	CK	UWD
• mirid sp. * plant bug	17a	CK,ES	UWD
Family Nabidae (damsel bugs)			
• <i>Hoplistoscelus sordidus</i> (Reuter) * damsel bug	15	CK	UWD
• <i>Lasiomerus</i> sp. (Reuter) * damsel bug	15	CK	UWD
• <i>Nabis</i> sp. Latreille, 1802 * damsel bug	15	CK	UWD
• nabid sp. * damsel bug	15	CK	UWD
Family Anthocoridae (flower bugs)			
• <i>Orius insidiosus</i> (Say) * insidious flower bug	15	CK	UWD
Family Phymatidae (ambush bugs)			
• <i>Phymata pennsylvanica</i> Handlirsh * ambush bug	15	CK	UWD
Family Reduviidae (assassin bugs)			
• <i>Sinea diadema</i> (Fabricius) * assassin bug	15	CK	UWD
• <i>Zelus exsanguis</i> (Stål) * assassin bug	15	CK	UWD
• reduviid sp.? * assassin bug	15	CK	UWD
Family Aradidae (flat or fungus bugs)			
• <i>Aradus</i> sp. Fabricius, 1803 * flat bug	15	CK	UWD
• aradid sp. * flat bug	15	CK	UWD

	SOURCE	LOCATION	HABITAT
Family Lygaeidae (seed bugs)			
• <i>Geocoris uliginosus</i> (Say) * big-eyed bug	15	CK	UWD
• <i>Lygaeus kalmii</i> Stål * small milkweed bug	15	CK	UWD
• <i>Myodocha serripes</i> Oliver * seed bug	15	CK	UWD
• lygaeid sp. * seed bug	17a	ES	UWD
Family Coreidae (leaf-footed bugs)			
• <i>Anasa tristis</i> (De Geer) * squash bug	15	CK	UWD
• <i>Leptoglossus oppositus?</i> Say * lead-footed bug	15	CK	UWD
Family Alydidae (broad-headed bugs)			
• alydid sp. * broad-headed bug	15	CK	UWD
Family Rhopalidae (scentless plant bugs)			
• <i>Arhyssus lateralis</i> (Say) * scentless plant bug	15	CK	UWD
• <i>Leptocoris trivittatus</i> (Say) * boxelder bug	15	CK	UWD
Family Cydnidae (burrower bugs)			
• cydnid sp. * burrower bug	15	CK	UWD
Family Thyreocoridae (negro bugs)			
• thyreocorid sp. * negro bug	15	CK	UWD
Family Scutelleridae (shield-backed bugs)			
• scutellerid sp. * shield-backed bug	17a	ES	UWD
Family Pentatomidae (stink bugs)			
• <i>Euschistus icterius</i> (Linnaeus) * green stink bug	15	CK	UWD
• <i>Thyanta pallido-virens</i> (Stål) * green stink bug	15	CK	UWD
• pentatomid sp. * gray stink bug	15	CK	UWD
ORDER HOMOPTERA (cicadas, leafhoppers & aphids)			
Family Acanaloniidae (planthoppers)			
• acanaloniid sp. * planthopper	15	CK	UWD
Family Cercopidae (froghoppers & spittlebugs)			
• <i>Philaenus spumarius</i> (Linnaeus) * meadow spittlebug	15	CK	UWD
• cercopid sp. * froghopper	15,17a	CK,ES	UWD
Family Cicadidae (cicadas or harvestflies)			
• <i>Tibicen canicularis</i> Harris * dog day cicada	15	CK	UWD
• <i>Tibicen linnei</i> (Smith & Grossbeck) * dog day cicada	15	CK	UWD
• cicadid sp. * cicada	17a	ES	UWD
Family Cicadellidae (leafhoppers)			
• <i>Draeculacephala mollipes</i> (Say) * cicadelin leafhopper	15	CK	UWD
• <i>Empoascus fabae</i> (Harris) * potato leafhopper	15	CK	UWD
• <i>Graphocephala coccinea</i> (Foerster) * colorful leafhopper	15	CK	UWD
• <i>Penthima americana</i> Fitch * gyponin leafhopper	15	CK	UWD
• <i>Typhlocyba pomaria</i> (McAtee) * white apple leafhopper	15	CK	UWD
• cicadellid spp. [5] * leafhoppers	15,17a	CK,ES	UWD
Family Membracidae (treehoppers)			
• membracid sp. * treehopper	15,17a	CK,ES	UWD
Family Psyllidae (jumping plantlice)			
• <i>Cacopsylla pyricola</i> (Foerster) * pear psylla	15	CK	UWD
• <i>Pachypsylla celtidismamma</i> Riley * hackberry nipple gall	15	CK	UWD
Family Aphididae (aphids)			
• <i>Aphis pomi</i> De Geer * green apple aphid	15	CK	UWD
• <i>Dysaphis plantaginea</i> (Passerini) * rosy apple aphid	15	CK	UWD
• <i>Eriosoma lanigerum</i> (Hausmann) * wooly aphid	15	CK	UWD
• <i>Melaphis rhois?</i> (Fitch) * sumac gall	15	CK	UWD
• <i>Myzus cerasi</i> (Fabricius) * black cherry aphid	15	CK	UWD

	SOURCE	LOCATION	HABITAT
Family Aphididae (continued)			
• <i>Myzus persicae</i> (Sulzer) * green peach aphid	15	CK	UWD
• <i>Periphyllus lyropictus</i> (Kessler) * Norway maple aphid	15	CK	UWD
• aphid sp. * red aphid	15	CK	UWD
Family Adelgidae [=Chermidae] (pine & spruce aphids)			
• <i>Adelges abeitis</i> (Linnaeus) * eastern spruce gall adelgid	15	CK	UWD
• <i>Adelges cooleyi</i> Gillette * Cooley spruce gall adelgid	15	CK	UWD
Family Phylloxeridae (bark & gall aphids)			
• <i>Daktulosphaira vitifoliae</i> (Fitch) * grape phylloxera	15	CK	UWD
• <i>Phylloxera caryaecaulis?</i> Fitch * shag-bark hickory gall	15	CK	UWD
Family Diaspididae (armored scales)			
• <i>Quadraspidiotus perniciosus</i> (Comstock) * San Jose scale	15	CK	UWD
ORDER NEUROPTERA (nerve-wing insects)			
Suborder Megaloptera (dobsonflies & alderflies)			
Family Corydalidae (dobsonflies or hellgrammites)			
• <i>Chauliodes</i> sp. Latreille * hellgrammite or fishfly	9,17a	CK,ES	LEB,STM
• <i>Corydalus cornutus</i> (Linnaeus) * hellgrammite	17a	CK,TR	STM
• <i>Corydalus</i> sp. Latreille * dobsonfly	15,17a	CK,TR	STM
• corydalid sp. * fishfly	15	CK	STM
Family Sialidae (alderflies)			
• <i>Sialis infumata</i> Newman * alderfly	17a	TR	STM
• <i>Sialis</i> sp. Latreille * alderfly	6,9,15,17a	CK,ES,TR	LEB,STM
Suborder Planipennia (dustywings & lacewings)			
Family Coniopterygidae (dustywings)			
• coniopterygid sp. * dustywing	15	CK	UWD
Family Sisyridae (spongillaflies)			
• <i>Climaciasp.</i> McLachlan * spongillafly	17,17a	LE,TR	LKB,LKS,STM
Family Hemerobiidae (brown lacewings)			
• hemerobiid sp. * brown lacewing	15	CK	UWD
Family Chrysopidae (green lacewings)			
• <i>Chrysopa oculata</i> Say * golden eye, green lacewing	15	CK	UWD
• chrysopid sp. * lacewing	17a	ES	UWD
ORDER COLEOPTERA (beetles)			
Family Carabidae (predaceous ground beetles)			
[=Cicindelidae]			
• <i>Brachinus</i> sp.? Weber, 1801 * bombardier ground beetle	15	CK	UWD
• <i>Calathus</i> sp. Bonelli, 1810 * ground beetle	15	CK	UWD
• <i>Cicindela</i> sp. Linnaeus, 1758 * tiger beetle	15	CK	UWD
• <i>Elaphrus ruscarius</i> Say * marsh or bog beetle	15	CK	WET
• <i>Harpalus compar</i> LeConte * ground beetle	15	CK	UWD
• <i>Harpalus herbivagus</i> Say * ground beetle	15	CK	UWD
• <i>Platynus placidus</i> (Say)* ground beetle	15	CK	UWD
• <i>Scarites subterraneus?</i> Fabricius, 1787 * ground beetle	15	CK	UWD
• <i>Stenolophus</i> sp.? Dejean, 1829 * ground beetle	15	CK	UWD
• carabid sp. * ground beetle	15,17a	CK,ES	LEB,UWD
Family Haliplidae (crawling water beetles)			
• <i>Haliplus borealis</i> LeConte* crawling water beetle	10	ES	LEB
• <i>Haliplus immaculicollis</i> Harris * crawling water beetle	10	ES	LEB
• <i>Haliplus triopsis</i> Say, 1823 * crawling water beetle	10,17a	ES,TR	LEB,STM
• <i>Haliplus</i> sp. Latreille, 1802 * crawling water beetle	17,17a	ES,TR	LEB,STM

	SOURCE	LOCATION	HABITAT
Family Haliplidae (continued)			
• <i>Peltodytes duodecimpunctatus</i> (Say) * crawling water beetle	10	ES	LEB
• <i>Peltodytes edentulus</i> (LeConte) * crawling water beetle	10	ES	LEB
• <i>Peltodytes lengi</i> Roberts * crawling water beetle	10	ES	LEB
• <i>Peltodytes muticus</i> (LeConte) * crawling water beetle	10	ES	LEB
• <i>Peltodytes sexmaculatus</i> Roberts * crawling water beetle	10	ES	LEB
• <i>Peltodytes</i> sp. Régimbart, 1878 * crawling water beetle	9	ES	VES
Family Noteridae (burrowing water beetles)			
• <i>Hydrocanthus iricolor</i> Say * burrowing water beetle	10	ES	LEB
• <i>noterid</i> sp. * burrowing water beetle	12,17a	ES	LEB
Family Dytiscidae (predaceous diving beetles)			
• <i>Acilius sylvanus</i> Hilsenhoff * striped diving beetle	10	ES	LEB
• <i>Acilius</i> sp. Leach, 1817 * striped diving beetle	3,17a	CK	STM
• <i>Agabus</i> sp. Leach, 1817 * diving beetle	3,17a	CK,ES	LEB,STM
• <i>Bidessus</i> sp. Sharp, 1882 * diving beetle	17	ES	LEB
• <i>Copelatus glyphicus</i> (Say) * diving beetle	10	ES	LEB
• <i>Copelatus</i> sp. Erichson, 1832 * diving beetle	17a	ES	LEB
• <i>Coptotomus lenticulus</i> Hilsenhoff, 1980 * diving beetle	10	ES	LEB
• <i>Dytiscus fasciventris</i> Say, 1824 * diving beetle	17a	ES	LEB
• <i>Dytiscus</i> sp. Linnaeus, 1758 * diving beetle	3,6,17,17a	CK,ES	LEB
• <i>Heterosternuta wickhami</i> (Zaitzev) * diving beetle	10	ES	LEB
• <i>Hydroporus niger</i> Say * diving beetle	10	ES	LEB
• <i>Hydroporus</i> sp. Clairville, 1806 * diving beetle	9,15	CK,ES	LEB,STM
• <i>Hydrovatus</i> sp. Motschulsky, 1855 * diving beetle	3,17a	CK,ES	LEB
• <i>Hygrotus dissimilis</i> Gemminger & Harold * diving beetle	10	ES	LEB
• <i>Hygrotus impressopunctatus</i> Schaller * diving beetle	10	ES	LEB
• <i>Hygrotus sayi</i> Balfour-Browne * diving beetle	10	ES	LEB
• <i>Ilybius</i> sp. Erichson, 1832 * diving beetle	17a	CK	STM
• <i>Laccophilus maculosus maculosus</i> Say * diving beetle	10	ES	LEB
• <i>Laccophilus</i> sp. Leach, 1817 * diving beetle	3,9,17a	CK	LEB
• <i>Neoporus</i> sp. Wolfe, 1984 * diving beetle	10	ES	LEB
• <i>Rhantus</i> sp. Dejean, 1833 * diving beetle	17a	CK	STM
• dytiscid sp. * predaceous diving beetle	17a	CK	STM
Family Gyrinidae (whirligig beetles)			
• <i>Dineutus assimilis</i> Kirby * whirligig beetle	10	ES	LEB
• <i>Dineutus</i> sp. Macleary, 1825 * whirligig beetle	3,9,17a	CK,ES	LEB,VES
Family Leiodidae [=Leptodiridae] (round fungus beetles)			
• leptodirin sp. * small carrion beetle	15	CK	UWD
Family Silphidae (carrion beetles)			
• <i>Silpha americana</i> Linnaeus * carrion beetle	15	CK	UWD
Family Staphylinidae (rove beetles)			
• <i>Bledius</i> sp. Leach, 1819 * rove beetle	17a	TR	STM
• <i>Creophilus maxillosus</i> (Linnaeus) * rove beetle	15	CK	UWD
• <i>Homaeotarsus</i> sp.? Hochhuth * rove beetle	15	CK	UWD
• <i>Paederus littorarius</i> Gravenhorst * rove beetle	15	CK	UWD
• <i>Quedius</i> sp? Stephens, 1829 * large rove beetle	15	CK	UWD
• <i>Staphylinus</i> sp. Linnaeus * rove beetle	15	CK	UWD
• <i>Stenus</i> sp. Latreille, 1796 * rove beetle	17a	CK,TR	STM
• staphylinid sp. * rove beetle	17a	ES	UWD
• tachyporin sp. * rove beetle	15	CK	UWD

	SOURCE	LOCATION	HABITAT
Family Hydrophilidae (water scavenger beetles)			
• <i>Anacaena limbata</i> (Fabricius) * water scavenger beetle	10	ES	LEB
• <i>Berosus fraternus</i> LeConte * water scavenger beetle	10	ES	LEB
• <i>Berosus infuscatus</i> LeConte * water scavenger beetle	10	ES	LEB
• <i>Berosus peregrinus</i> (Herbst) * water scavenger beetle	10	ES	LEB
• <i>Berosus striatus</i> (Say, 1825) * water scavenger beetle	10,17	ES	LEB
• <i>Berosus</i> sp. Leach, 1817 * water scavenger beetle	3,17a	CK	RAV
• <i>Cymbiodyta</i> sp. Bedel, 1881 * water scavenger beetle	10	ES	LEB
• <i>Enochrus hamiltoni</i> (Horn) * water scavenger	10	ES	LEB
• <i>Enochrus ochraceus</i> (Melsheimer, 1844) * water scavenger	10,15	CK,ES	LEB,STM
• <i>Enochrus perplexus</i> (LeConte) * water scavenger	10	ES	LEB
• <i>Enochrus pygmaeus nebulosus</i> (Say) * water scavenger	10	ES	LEB
• <i>Enochrus sayi</i> Gundersen * water scavenger	10	ES	LEB
• <i>Enochrus</i> sp. Thomson, 1859 * water scavenger beetle	17a	CK	STM
• <i>Helophorus lineatus</i> Say * water scavenger beetle	10	ES	LEB
• <i>Helophorus orientalis</i> Motschulsky * water scavenger beetle	10	ES	LEB
• <i>Helophorus marginicollis</i> Smetana * water scavenger beetle	10	ES	LEB
• <i>Helophorus</i> sp. Fabricius, 1775 * water scavenger beetle	9,15	CK,ES	LEB,UWD
• <i>Hydrobius fuscipes</i> (Linnaeus) * water scavenger beetle	10	ES	LEB
• <i>Hydrochara leechi</i> Smetana * water scavenger beetle	10	ES	LEB
• <i>Hydrochara obtusata</i> Say, 1823 * water scavenger beetle	3,9,10,17a	CK,ES,TR	LEB,STM
• <i>Hydrochara</i> sp. Berthold, 1827 * water scavenger beetle	10	ES	LEB
• <i>Hydrophilus</i> sp. Geoffrey, 1762 * water scavenger beetle	17a	TR	STM
• <i>Laccobius</i> sp. Erichson, 1837 * water scavenger beetle	9	ES	LEB
• <i>Paracymus subcupreus</i> (Say) * narrow w. s. beetle	10	ES	LEB
• <i>Tropisternus lateralis nimbatus</i> (Say, 1823)* narrow w. s. beetle	10,17,17a	ES,TR	LEB,STM
• <i>Tropisternus natator</i> d'Orchymont * narrow w. s. beetle	10	ES	LEB
• <i>Tropisternus</i> sp. Solier, 1834 * narrow water scavenger beetle	3,9,17a	CK,ES,TR	LEB,STM,VES
Family Histeridae (hister beetles)			
• <i>Hister foedatus?</i> LeConte* hister beetle	15	CK	UWD
• <i>Saprinus</i> sp. Erichson, 1834 * hister beetle	15	CK	UWD
Family Scirtidae [=Helodidae] (marsh beetles)			
• <i>Cyphon</i> sp. Paykull, 1799 * marsh beetle	9	ES	LEB
Family Lucanidae (stag beetles)			
• <i>Pseudolucanus</i> sp. Hope, 1845 * pinching beetle	15	CK	UWD
Family Scarabaeidae (scarab & dung beetles)			
• <i>Aphodius</i> sp. Illiger, 1798 * dung beetle	15	CK	UWD
• <i>Euphoria inda?</i> Linnaeus * bumblebee flower beetle or fruit chafer	15	CK	UWD
• <i>Hoplia</i> sp. Illiger, 1803 * grapevine beetle	15	CK	UWD
• <i>Macroderctylus subspinosus</i> (Fabricius) * rose chafer	15	CK	UWD
• <i>Pelidnota punctata</i> (Linnaeus) * grapevine beetle	15	CK	UWD
• <i>Phyllophaga</i> spp. Harris [2] * June beetles or junebugs	15	CK	UWD
• <i>Popilia japonica</i> (Newman, 1841) * Japanese beetle	15	CK	UWD
• melolonthin sp. * May beetle	15	CK	UWD
Family Buprestidae (metallic wood borers)			
• <i>Chrysobothris femorata</i> (Oliver) * flat-headed apple tree borer	15	CK	UWD
Family Heteroceridae (mud-loving beetles)			
• <i>Heterocerus</i> sp. Fabricius, 1792 * variegated mud-loving beetle	17a	ES,TR	STM,UWD
Family Dryopidae (long-toed water beetles)			
• <i>Helichus</i> sp. Erichson, 1847 * long-toed water beetle	6	CK,ES	LEB

	SOURCE	LOCATION	HABITAT
Family Elmithidae [=Elmidae] (riffle beetles)			
• <i>Ancyronyx variegatus</i> Germar, 1824 * riffle beetle	17a	TR	STM
• <i>Dubiraphia bivittata</i> (LeConte) * riffle beetle	10	ES	LEB
• <i>Dubiraphia</i> sp. Sanderson, 1954 * riffle beetle	9,17a	ES,TR	LEB,STM
• <i>Microcylloepus</i> sp. Hinton, 1935 * riffle beetle	9	ES	LEB
• <i>Stenelmis crenata</i> (Say) * riffle beetle	10	ES	LEB
• <i>Stenelmis</i> sp. Dufour, 1835 * riffle beetle	17a	CK,TR	STM
• elmid sp. (Westwood, 1838) * riffle beetle	6,12,15,17a	CK,ES,TR	LEB,STM
Family Psephenidae (water-penny beetles)			
• <i>Psephenus herricki</i> (DeKay, 1844) * water-penny beetle	3,6,15,17,17a	CK,TR	RAV,STM
Family Elateridae (click beetles & wireworms)			
• <i>Colaulon</i> sp. Arnett * click beetle	15,17a	CK,ES	UWD
• <i>Melanotus</i> sp. Esdhscholtz * click beetle	15	CK	UWD
Family Lampyridae (fireflies & glowworms)			
• <i>Ellychnia</i> sp. LeConte, 1851 * firefly or lightningbug	15	CK	UWD
• <i>Lucidota atra</i> (Fabricius) * firefly or lightningbug	15	CK	UWD
• <i>Lucidota punctata</i> LeConte, 1833 * firefly or lightningbug	15	CK	UWD
• <i>Photinus pyralis</i> (Linnaeus) * firefly or lightningbug	15	CK	UWD
• <i>Photuris pennsylvanica</i> (De Geer) * firefly or lightningbug	15	CK	UWD
• lampyrid sp. * firefly	15	CK	UWD
Family Cantharidae (soldier beetles)			
• <i>Cantharis bilineatus</i> Say * soldier beetle	15	CK	UWD
• <i>Chauliognathus marginata</i> Fabricius * soldier beetle	15	CK	UWD
• <i>Chauliognathus pennsylvanicus?</i> (De Geer) * soldier beetle	15	CK	UWD
• <i>Podabrus flavicollis?</i> LeConte * soldier beetle	15	CK	UWD
• <i>Podabrus modestus?</i> (Say) * soldier beetle	15	CK	UWD
Family Derodontidae (tooth-necked fungus beetles)			
• <i>Derodontus</i> sp. LeConte, 1861 * tooth-necked fungus beetle	15	CK	UWD
Family Dermestidae (skin beetles)			
• <i>Anthrenus scrophulariae?</i> (Linnaeus) * carpet beetle	15	CK	UWD
• <i>Dermestes lardarius?</i> Linnaeus * larder beetle	15	CK	UWD
Family Bostrichidae [=Lyctidae] (branch & twig borers)			
• lyctin sp.? * powder-post beetle	15	CK	UWD
Family Cleridae (checkered beetles)			
• clerid sp.? * checkered beetle	15	CK	UWD
Family Melyridae (soft-winged flower beetles)			
• melyrid sp. * soft-winged flower beetle	15	CK	UWD
Family Nitidulidae (sap beetles)			
• <i>Carpophilus</i> sp. Stephens, 1829 * carpophilin sap beetle	15	CK	UWD
• <i>Glischrochilus fasciatus</i> (Oliver) * cryptarchin sap beetle	15	CK	UWD
• <i>Stelidota octomaculata</i> (Say) * tiny sap beetle	15	CK	UWD
• nitidulid sp. * sap beetle	15	CK	UWD
Family Cucujidae (flat bark beetles)			
• <i>Brontes</i> sp.? Fabricius * flat bark beetle	15	CK	UWD
• <i>Telephanus velox?</i> Haldemann * flat bark beetle	15	CK	UWD
• cucujid sp. * flat bark beetle	17a	ES	UWD
Family Erotylidae (pleasing fungus beetles)			
• erotylid sp.? * pleasing fungus beetle	15	CK	UWD
Family Phalacridae (shining flower beetles)			
• phalacrid sp.? * shining mold beetle	15	CK	UWD

	SOURCE	LOCATION	HABITAT
Family Coccinellidae (lady beetles or ladybugs)			
• <i>Chilocorus stigma</i> (Say) * twice-stabbed ladybug	15	CK	UWD
• <i>Coleomegilla</i> sp. Timberlake, 1920 * ladybird beetle	15	CK	UWD
• <i>Epilachna varivestis</i> Mulsant * Mexican bean beetle	15	CK	UWD
• <i>Harmonia axyridis</i> (Pallas) * Asiatic lady beetle	15	CK	UWD
• <i>Hippodamia convergens?</i> Guérin-Meneville * convergent ladybird beetle	15	CK	UWD
• <i>Stethorus punctum</i> LeConte * black lady beetle	15	CK	UWD
Family Endomychidae (handsome fungus beetles)			
• endomychid sp. * handsome fungus beetle	15	CK	UWD
Family Tenebrionidae (darkling ground beetles)			
• <i>Alobates pensylvanicus?</i> De Geer * darkling beetle	15	CK	UWD
• <i>Bolitotherus cornutus</i> (Panzer) * horned fungus beetle	15,17	CK	UWD
Family Meloidae (blister beetles)			
• <i>Epicauta</i> sp. Dejean, 1834 * blister beetle	15	CK	UWD
• <i>Latta aenea?</i> (Say) * blister beetle	15	CK	UWD
Family Salpingidae (narrow-waisted bark beetles)			
• salpingid sp. [adult] * narrow-waisted bark beetle	9	ES	WET
Family Anthicidae (ant-like flower beetles)			
• <i>Anthicus</i> sp.? Paykull, 1798 * ant-like flower beetle	15	CK	UWD
Family Cerambycidae (long-horned or timber beetles)			
• <i>Cyrtophorus verrucosus</i> (Oliver) * long-horned beetle	15	CK	UWD
• <i>Elaphidionoides</i> sp. Linsley, 1957 [= <i>Elaphidion</i> Serville, 1834] * longhorn twig pruner beetle	15	CK	UND
• <i>Megacyllene robiniae</i> (Forster) * locust borer	15	CK	UWD
• <i>Oberea bimaculata</i> (Olivier) * raspberry cane borer	15	CK	UWD
• <i>Parandra brunnea</i> (Fabricius) * pole borer	15	CK	UWD
• <i>Tetraopes</i> sp. Serville, 1835 * milkweed beetle	15	CK	UWD
• cerambycid sp. * locust borer beetle	15	CK	UWD
Family Chrysomelidae (leaf beetles)			
• <i>Acalymma vittata?</i> (Fabricius) * striped cucumber beetle	15	CK	UWD
• <i>Altica chalybea</i> Illiger * grape flea beetle	15	CK	UWD
• <i>Chrysochus auratus</i> (Fabricius, 1775) * dogbane beetle or goldsmith beetle	15	CK	UWD
• <i>Diabrotica undecimpunctata howardi</i> Barber * spotted cucumber beetle	15,17	CK	UWD
• <i>Disonycha</i> sp. Chevrolat, 1844 * leaf beetle	17a	CK	STM
• <i>Donacia</i> sp. Fabricius * leaf beetle	3,6,9,17a	ES	LEB,WET
• <i>Leptinotarsa decemlineata</i> (Say) * Colorado potato beetle	15	CK	UWD
• <i>Odontota dorsalis?</i> (Thunberg, 1805) [= <i>Chalepus dorsalis</i>] * locust leaf beetle	15	CK	UWD
• <i>Xenochalepus dorsalis</i> (Thunburg) * locust leafminer	15	CK	UWD
• <i>cassidin</i> sp. * tortoise beetle	15	CK	UWD
• chrysomelid sp. * leaf beetle	17a	ES	UWD
Family Curculionidae [=Scolytidae] (weevils)			
• <i>Conotrachelus nenuphar</i> (Herbst) * plum curculio	15	CK	UWD
• <i>Curculio</i> spp. [2] Linnaeus, 1758 * chestnut & nut weevil	15	CK	UWD
• <i>Hyperodes</i> sp. Jekel, 1864 * weevil	17a	TR	STM
• <i>Scolytus rugulosus</i> (Ratzeburg) * shot-hole borer	15	CK	UWD
• <i>Sphenophotus</i> sp. Schoenherr * billbug weevil	15	CK	UWD
• <i>brachyrhinin</i> sp. * broad-nosed weevil	15	CK	UWD

	SOURCE	LOCATION	HABITAT
Family Curculionidae (continued)			
• thylactin spp. [2] * snout beetles	15	CK	UWD
• curculionid sp.? * acorn weevil	15	CK	UWD
• curculionid sp. * grape cane weevil	15	CK	UWD
• curculionid sp. * weevil	15	CK	UWD
ORDER MECOPTERA (scorpionflies & allies)			
Family Panorpidae (common scorpionflies)			
• <i>Panorpa helena?</i> Byers * common scorpionfly	15	CK	UWD
ORDER SIPHONAPTERA (fleas)			
Family Pulicidae (common fleas)			
• <i>Ctenocephalides canis</i> (Curtis) * dog flea	15,17	CK	RUL
• <i>Ctenocephalides felis</i> (Bouché) * cat flea	17	CK	RUL
ORDER DIPTERA (true flies)			
Family Tipulidae (crane flies)			
• <i>Brachypternina</i> sp. Osten Sacken * crane fly	3,17a	CK,TR	STM
• <i>Hexatomina</i> sp. Latreille, 1809 * crane fly	17a	TR	STM
• <i>Paradelphomyia</i> sp. Alexander, 1936 * crane fly	17a	TR	STM
• <i>Pedicia</i> sp. Latreille, 1809 * crane fly	17a	TR	STM
• <i>Tipula</i> sp. Linnaeus, 1758 * crane fly	3,9,17a	CK,ES,TR	LEB,STM
• limnophilin sp. * crane fly	17a	ES	UWD
• tipiid sp. * crane fly	15,17a	CK,ES,TR	STM,JWD
Family Trichoceridae (winter crane flies)			
• <i>Trichocera</i> sp.? Meigen, 1803 * winter crane fly	15	CK	UWD
• trichocerid sp. * winter crane fly	15	CK	UWD
Family Tanyderidae (primitive crane flies)			
• <i>Protoplasa</i> sp.? Osten Sacken, 1859 * primitive crane fly	15	CK	UWD
Family Ptychopteridae (phantom crane flies)			
• ptychopterid sp. * phantom crane fly	15	CK	UWD
Family Chaoboridae (phantom midges)			
• <i>Chaoborus flavicans</i> Meigen, 1830 * phantom midge	9	ES	LEB
• <i>Chaoborus punctipennis</i> (Say, 1823) * phantom midge	9,17	ES	LEB
• <i>Chaoborus</i> sp. Lichtenstein, 1800 * phantom midge	6,9	ES	LEB
Family Culicidae (mosquitoes)			
• <i>Aedes communis?</i> (De Geer, 1776) * mosquito	15	CK	UWD
• <i>Aedes infirmatus</i> Dyar & Knab, 1906 * mosquito	9	ES	LEB
• <i>Aedes vexans</i> Meigen, 1830 * mosquito	9	ES	LEB
• <i>Aedes</i> sp. Meigen, 1818 * mosquito	3,9	CK,ES	LEB
• <i>Culex pipiens</i> Linnaeus, 1758 * mosquito	15	CK	UWD
• <i>Culex</i> spp. Linnaeus, 1758 * mosquitos	9,15,17a	CK,ES	LEB,UWD
Family Simuliidae (black flies)			
• <i>Simulium</i> sp. Latreille, 1802 * black fly	3,17a	CK,ES	LEB,STM
Family Ceratopogonidae (biting midges or no-see-ums)			
• <i>Probezzia</i> sp. Kieffer, 1906 * biting midge	6	ES	LEB
• ceratopogonid sp. (<i>Bezzia-Palpomyia</i> group) * biting midge	6,9,12	ES	LEB,VES
Family Chironomidae (midges)			
Subfamily Chironominae [=Tendipedinae]			
• <i>Chironomus anthracinus</i> Zetterstedt, 1860 * midge	6,9	ES	LEB
• <i>Chironomus cristatus</i> Fabricius, 1805 [= <i>C. plumosus</i>] * midge	17	ES	LEB
• <i>Chironomus decorus</i> Johannsen, 1905 * midge	6	ES	LEB
• <i>Chironomus plumosus</i> (Linnaeus, 1758) * midge	9	ES	LEB

	SOURCE	LOCATION	HABITAT
Subfamily Chironominae (continued)			
• <i>Chironomus riparus</i> Meigen, 1804 * midge	6	ES	LEB
• <i>Chironomus staegeri</i> Lundbeck, 1898 * midge	9	ES	LEB
• <i>Chironomus tentans</i> Fabricius, 1805 * midge	17	ES	LEB
• <i>Chironomus</i> sp. Meigen, 1803 * midge	9,12	ES	LEB
• <i>Cladopelma</i> sp. Kieffer, 1921 * midge	9	ES	LEB
• <i>Cladotanytarsus</i> sp. Kieffer, 1921 * midge	9	ES	LEB
• <i>Cryptochironomus</i> sp. Kieffer, 1918 * midge	9	ES	LEB
• <i>Dicrotendipes nervous</i> (Staeger, 1839) * midge	6	ES	LEB
• <i>Dicrotendipes</i> sp. Kieffer, 1913 * midge	9	ES	LEB
• <i>Endochironomus nigrans</i> Johannsen, 1905 * midge	6	ES	LEB
• <i>Endochironomus</i> sp. Kieffer, 1918 * midge	9	ES	LEB
• <i>Glyptotendipes loberiferus</i> Say, 1823 * midge	6	ES	LEB
• <i>Glyptotendipes</i> sp. Kieffer, 1913 * midge	9,17	ES	LEB, VES
• <i>Limnochironomus tenuicadatus</i> Malloch, 1915 [= <i>Parachironomus tenuicadatus</i>] * midge	17	ES	LEB
• <i>Lipiniella</i> sp. Shilova, 1961 * midge	9	ES	LEB
• <i>Microchironomus</i> sp. Kieffer, 1918 * midge	9	ES	LEB
• <i>Micropsectra polita</i> Malloch, 1915 * midge	6	ES	LEB
• <i>Microtendipes caelum</i> Townes, 1945 * midge	6	ES	LEB
• <i>Parachironomus</i> sp. Lenz, 1921 * midge	9	ES	LEB, VES
• <i>Paralauterborniella</i> sp. Lenz, 1941 * midge	9	ES	LEB
• <i>Paratanytarsus</i> sp. Thienemann & Bause, 1913 * midge	9	ES	LEB
• <i>Paratendipes</i> sp. Kieffer, 1911 * midge	9	ES	LEB
• <i>Polypedilum halterale</i> (Coquillett, 1901) [= <i>Tripodura h.</i>] * midge	9	ES	LEB
• <i>Polypedilum</i> sp. Kieffer, 1912 * midge	9	ES	LEB
• <i>Rheotanytatsus exiguus</i> Johannsen, 1905 * midge	6	ES	LEB
• <i>Stictochironomus</i> sp. Kieffer, 1919 * midge	9	ES	LEB
• <i>Tanytarsus glabrescens</i> Edwards * midge	6	ES	LEB
• <i>Tanytarsus</i> sp. Wulp, 1858 * midge	9	ES	LEB, VES
• <i>Thienemannimyia</i> sp. Fittkau, 1957 * midge	6	ES	LEB
• <i>Tribelos</i> sp. Townes, 1945 * midge	9	ES	LEB
• chironomin sp. * midge	15,17a	CK,ES	UWD
Subfamily Diamesinae			
• <i>Pothastia longimanus</i> Kieffer, 1922 * midge	6	ES	LEB
• <i>Sympothastia</i> sp. Pagast, 1947 * midge	6	ES	LEB
Subfamily Orthocladiinae			
• <i>Cricotopus sylvestris</i> (Fabricius, 1794) [= <i>Isocladus s.</i>] * midge	9	ES	LEB, VES
• <i>Cricotopus tremulus</i> (Linnaeus, 1758) * midge	6	ES	LEB
• <i>Cricotopus trifascia</i> (Panzer) Edwards, 1929 * midge	17	ES	LEB
• <i>Cricotopus</i> sp. Wulp, 1874 * midge	9	ES	LEB, VES
• <i>Hydrobaenus</i> spp. Fries, 1830 * midges	9	ES	LEB
• <i>Limnophyes</i> sp. Eaton, 1875 * midge	9	ES	VES
• <i>Orthocladius obumbratus</i> Johannsen, 1905 * midge	6	ES	LEB
• <i>Orthocladius</i> sp. Wulp, 1874 * midge	9	ES	LEB, VES
Subfamily Tanypodinae [=Pelopiinae]			
• <i>Ablabesmyia parajanta</i> Roback, 1971 [= <i>Pentaneura p.</i>] * midge	6	ES	LEB
• <i>Coelotanypus concinnus</i> (Coquillett, 1895) * midge	6	ES	LEB
• <i>Coelotanypus</i> sp. Kieffer, 1913 * midge	3,9,17a	CK,ES	LEB

	SOURCE	LOCATION	HABITAT
Subfamily Tanypodinae (continued)			
• <i>Labrundinia pilosilla</i> Loew, 1866 * midge	6	ES	LEB
• <i>Pentaneura</i> sp. Philippi, 1865 * midge	6	ES	LEB
• <i>Procladius sublettei</i> Roback, 1971 * midge	6	ES	LEB
• <i>Procladius</i> sp. Skuse, 1889 * midge	9	ES	LEB
• <i>Tanypus</i> sp. Meigen, 1803 * midge	6,9,17a	ES,TR	LEB,STM,VES
Family Bibionidae (march flies)			
• <i>Bibio</i> sp.? Geoffroy, 1762 * march fly	15	CK	UWD
Family Cecidomyiidae (gall midges)			
• <i>Aphidoletes aphidimyza</i> (Rondani)* orange maggot or gall gnat	15	CK	UWD
• <i>Rhopalomyia solidaginis</i> (Loew) * leafy goldenrod gall	15	CK	UWD
Family Sciaridae (dark-winged fungus gnats)			
• sciarid sp. * dark-winged fungus gnat	15	CK	UWD
Family Mycetophilidae (fungus gnats)			
• mycetophilid sp. * fungus gnat	15,17a	CK,ES	UWD
Family Blepharoceridae (net-winged midges)			
• blepharocerid sp. * net-winged midge	17a	ES	UWD
Family Rhagionidae (rhagionid snipe flies)			
• <i>Rhagio</i> sp. Fabricius, 1775 * snipe fly	15	CK	UWD
Family Athericidae (athericid snipe flies)			
• <i>Atherix varigata</i> Walker * snipe fly	17a	TR	STM
• <i>Atherix</i> sp. Meigen, 1803 * snipe fly	17a	TR	STM
Family Stratiomyidae (soldier flies)			
• <i>Odontomyia</i> sp. Meigen, 1803 [=Catatasina sp.] * soldier fly	9	ES	VES
• <i>Hedriodiscus</i> sp. Enderlein, 1914 * soldier fly	9	ES	LEB,VES
• <i>Stratiomys</i> sp. Geoffroy, 1762 * soldier fly	3,17a	CK	STM
Family Tabanidae (horse & deer flies)			
• <i>Chrysops</i> sp. Meigen, 1803 * deer fly	9,15,17a	CK,TR	STM
• <i>Merycomia</i> sp. Hine * horse fly	17a	TR	STM
• <i>Tabanus</i> spp. Linnaeus [2] * horse flies	3,15,17a	CK,TR	STM
• tabanid sp. * horse fly	17a	CK	UWD
Family Asilidae (robber flies)			
• asilid sp. * robber fly	15	CK	UWD
Family Therevidae (stiletto flies)			
• therevid sp. * stiletto fly	15	CK	UWD
Family Bombyliidae (bee flies)			
• <i>Anthrax</i> sp. Scopoli, 1763 * bee fly	15	CK	UWD
• bombyliid sp. * bee fly	15	CK	UWD
Family Dolichopodidae (long-legged flies)			
• dolichopodid sp. * long-legged fly	15	CK	UWD
Family Phoridae (humpbacked flies)			
• phorid sp. * humpbacked fly	15,17a	CK,ES	UWD
Family Lonchpteridae (spear-winged flies)			
• lonchopterid sp. * spear-winged fly	17a	ES	UWD
Family Syrphidae (flower flies)			
• <i>Baccha</i> sp.? Fabricius, 1805 * flower fly	15	CK	UWD
• <i>Didea</i> sp. Macquart, 1834 * flower fly	15	CK	UWD
• <i>Eristalis tenax</i> ? Linnaeus * hover fly	15	CK	UWD
• <i>Syrphus</i> sp. Fabricius, 1775 * hover fly	15	CK	UWD
• syrphid sp. * flower fly	17a	ES	UWD

	SOURCE	LOCATION	HABITAT
Family Tephritidae (fruit flies)			
• <i>Eurosta solidaginis</i> Fitch * round ball goldenrod gall	15	CK	UWD
• <i>Rhagoletis pomonella</i> Walsh * apple maggot	15	CK	UWD
• tephritid sp. Fitch * fruit fly	15,17a	CK,ES	UWD
Family Sciomyzidae (marsh flies)			
• sciomyzid sp. * marsh fly	17a	ES	UWD
Family Lauxaniidae (lauxaniid flies)			
• lauxaniid sp. * lauxaniid fly	15	CK	UWD
Family Asteiidae (asteiid flies)			
• asteiid sp. * asteiid fly	15	CK	UWD
Family Anthomyzidae (anthomyzid flies)			
• anthomyzid sp. * anthomyzid fly	15	CK	UWD
Family Drosophilidae (vinegar or pomace flies)			
• <i>Drosophila melanogaster</i> Meigen * pomace fly	15	CK	UWD
Family Ephydriidae (shore flies)			
• ephydrid sp.* shore fly	9,15	CK,ES	LEB,STM
Family Chloropidae (chloropid or frit flies)			
• chloropid sp. * frit fly	15	CK	UWD
Family Muscidae (house & stable flies)			
• <i>Musca</i> sp. Linnaeus, 1758 * house fly	15	CK	UWD
• muscid spp. [3] * muscid flies	15,17a	CK,ES	UWD
Family Calliphoridae (blow flies)			
• <i>Lucilia illustris?</i> (Meigen) * blow fly	15	CK	UWD
• <i>Pollenia</i> sp.? Robineau-Desvoidy, 1830 * cluster blow fly	15	CK	UWD
• calliphorid sp. * blow fly	15	CK	UWD
Family Sarcophagidae (flesh flies)			
• <i>Helicobia</i> sp. Coquillett * flesh fly	15	CK	UWD
Family Tachinidae (tachina flies)			
• <i>Spoggesia</i> sp.? Rondani, 1859 * tachina fly	15	CK	UWD
• tachinid sp. * tachina fly	15	CK	UWD
Family Heleomyzidae (heleomyzid flies)			
• heleomyzid sp. * heleomyzid fly	15	CK	UWD
ORDER TRICHOPTERA (caddisflies)			
Family Rhyacophilidae (primitive caddisflies)			
• <i>Rhyacophila ledra</i> Ross, 1936 * caddisfly	13	CK	RAV
• <i>Rhyacophila vibex</i> Milne, 1936 * caddisfly	13	CK	RAV
• <i>Rhyacophila</i> sp. Pictet, 1834 * caddisfly	6	CK	STM
Family Hydroptilidae (micro-caddisflies)			
• <i>Agraylea</i> spp. Curtis, 1834 * caddisflies	9,13	CK,ES	LEB
• <i>Hydroptila ajax</i> Ross, 1938 * caddisfly	13	CK,ES	LEB
• <i>Hydroptila angusta</i> Ross, 1938 * caddisfly	13	CK	STM
• <i>Hydroptila armata</i> Ross, 1938 * caddisfly	1	ES	LEB
• <i>Hydroptila consimilis</i> Morton, 1905 * caddisfly	13	ES	LEB
• <i>Hydroptila grandiosa</i> Ross, 1938 * caddisfly	13	CK	STM
• <i>Hydroptila perdita</i> Morton, 1905 * caddisfly	13	CK,ES	LEB
• <i>Hydroptila spatulata</i> Morton, 1905 * caddisfly	13	CK	STM
• <i>Hydroptila waubesiiana</i> Betten, 1934 * caddisfly	1,13	CK,ES	LEB
• <i>Hydroptila</i> sp. Dalman, 1819 * caddisfly	17a	ES	LEB
• <i>Ochrotrichia tarsalis</i> Hagen, 1861 * caddisfly	1,13	CK,ES	LEB
• <i>Orthotrichia americana</i> Banks, 1904 * caddisfly	1,13	CK,ES	LEB
• <i>Oxyethira pallida</i> (Banks, 1904) * caddisfly	1	ES	LEB

	SOURCE	LOCATION	HABITAT
Family Philopotamidae (finger-net caddisflies or silken-tube spinners)			
• <i>Chimarra obscura</i> Walker, 1852 * caddisfly	13	CK,ES	LEB
• <i>Chimarrasp.</i> Stephens, 1829 * caddisfly	6	ES	LEB
Family Hydropsychidae (net-spinning caddisflies)			
• <i>Ceratopsyche bronta</i> Ross, 1938 [= <i>Sympitopsyche bronta</i>] * c.	1	ES	LEB
• <i>Ceratopsyche slossonae</i> Banks, 1905 [= <i>Sympitopsyche s.</i>] * c.	1	ES	LEB
• <i>Ceratopsyche</i> sp. Ross & Unzicker, 1977 * caddisfly	17a	ES,TR	LEB,STM
• <i>Cheumatopsyche burksi</i> Ross, 1941 * caddisfly	13	ES	LEB
• <i>Cheumatopsyche campyla</i> Ross, 1938 * caddisfly	13	CK	STM
• <i>Cheumatopsyche minuscula</i> Banks, 1907 * caddisfly	13	ES	LEB
• <i>Cheumatopsyche pasella</i> Ross, 1941 * caddisfly	13	ES	LEB
• <i>Cheumatopsyche sordida</i> (Hagen, 1861) * caddisfly	13	CK,ES	LEB
• <i>Cheumatopsyche</i> sp. Wallengreen, 1891 * caddisfly	6,17a	ES,TR	LEB,STM
• <i>Hydropsyche betteni</i> Ross, 1938 * caddisfly	1,3,13	CK,ES	LEB
• <i>Hydropsyche recurvata</i> Banks, 1914 * caddisfly	13	CK,ES	LEB
• <i>Hydropsyche walkeri</i> Betten & Moseley, 1940 * caddisfly	13	CK	STM
• <i>Hydropsyche</i> sp. Pictet, 1834 * caddisfly	6,17a	CK,ES,TR	LEB,STM
• <i>Potamyia</i> sp. Banks, 1900 * caddisfly	3,17a	CK,TR	STM
• hydropsychid sp. * caddisfly	17a	ES	LEB
Family Polycentropodidae (tube-making & trumpet-net caddisflies)			
• <i>Cernotina ohio</i> Ross, 1939 * caddisfly	13	ES	LEB
• <i>Cymellus fraternus</i> Banks, 1930 * caddisfly	13	CK,ES	LEB
• <i>Cymellus marginalis</i> Banks, 1930 * caddisfly	1	ES	LEB
• <i>Neureclipsis crepuscularis</i> Walker, 1852 * caddisfly	13	ES	LEB
• <i>Nyctiophylax moestus</i> Banks, 1911 * caddisfly	13	CK,ES	LEB
• <i>Polycentropus aureolus</i> Banks, 1930 * caddisfly	13	CK	STM
• <i>Polycentropus cinereus</i> Hagen, 1861 * caddisfly	13	CK	STM
• <i>Polycentropus crassicornis</i> Walker, 1852 * caddisfly	13	ES	LEB
• <i>Polycentropus interruptus</i> (Banks, 1914) * caddisfly	13	ES	LEB
• <i>Polycentropus</i> sp. Curtis, 1835 * caddisfly	17a	ES,TR	LEB,STM
Family Phryganeidae (large caddisflies)			
• <i>Phryganea cinerea</i> Walker, 1852 * caddisfly	13	ES	LKS
Family Limnephilidae (log-cabin caddisflies)			
• <i>Limnophilus submonilifer</i> Walker, 1852 * caddisfly	13	CK	STM
• <i>Limnophilus</i> sp.? Leach, 1815 [or <i>Philarctus</i> sp.?] * caddisfly	9,17	ES	LEB
• <i>Neophylax</i> sp. McLachlan, 1871 * caddisfly	17a	CK	STM
• <i>Pycnopsyche</i> sp. Banks, 1905 * caddisfly	17a	TR	STM
Family Helicopsychidae (snailcase makers)			
• <i>Helicopsyche</i> sp. Hagen, 1866 * caddisfly	17a	TR	STM
Family Leptoceridae (long-horned caddisflies)			
• <i>Ceraclea cancellatus</i> Betten, 1934 * caddisfly	13	CK	STM
• <i>Ceraclea resurgens</i> Walker, 1852 * caddisfly	13	CK	STM
• <i>Ceraclea tarsi-punctata</i> Vorhies, 1909 * caddisfly	1,13	CK,ES	LEB
• <i>Ceraclea transversa</i> (Hagen, 1861) * caddisfly	1	ES	LEB
• <i>Ceraclea</i> sp. Stephens, 1829 * caddisfly	17a	CK	STM
• <i>Leptocerus americanus</i> Banks, 1899 * caddisfly	13	CK	LEB
• <i>Nectopsyche</i> spp. Flint, 1974 * caddisflies	13,17a	CK,ES	LEB,STM
• <i>Oecetis avara</i> Banks, 1895 * caddisfly	13	ES	LEB

	SOURCE	LOCATION	HABITAT
Family Leptoceridae (continued)			
• <i>Oecetis cinerascens</i> (Hagen, 1861) * caddisfly	13	CK,ES	LEB
• <i>Oecetis inconspicua</i> Walker, 1852 * caddisfly	1,13	CK,ES	LEB
• <i>Oecetis persimilis</i> Banks, 1907 * caddisfly	13	CK	STM
• <i>Oecetis</i> sp. Wallengren, 1891 * caddisfly	17a	CK	STM
• <i>Triaenodes frontalis</i> Banks, 1907 * caddisfly	13	ES	LEB
• leptocerid sp. * caddisfly	17a	ES	UWD
ORDER LEPIDOPTERA (butterflies & moths)			
Family Tineidae (clothes moths)			
• tineid sp. * clothes moth	15	CK	UWD
Family Gracillariidae (leaf blotch miners)			
• <i>Phyllonorycter blancardella</i> (Fabricius) * spotted tentiform leafminer	15	CK	UWD
Family Gelechiidae (gelechiid moths)			
• <i>Gnorimoschema gallaesolidaginis</i> Riley * golden rod gall	15	CK	UWD
Family Yponomeutoidea (ermine moths)			
• yponomeutoid sp. * ermine moth	17a	ES	UWD
Family Sesiidae (clearwings)			
• <i>Pennisetia marginata</i> Harris * raspberry crown borer	15	CK	UWD
• <i>Podosesia syringae syringae</i> (Harris) * lilac borer	15	CK	UWD
• <i>Synanthedon exitiosa</i> (Say) * peach tree borer	15	CK	UWD
• <i>Synanthedon pictipes</i> (Grote & Robinson) * lesser p. tree borer	15	CK	UWD
• <i>Synanthedon scitula</i> (Harris) * dogwood borer	15	CK	UWD
Family Tortricidae (leaf-rollers)			
• <i>Archips argyrospila</i> (Walker) * fruittree leaf-roller	15	CK	UWD
• <i>Archips</i> sp.? (Tentamen) Hübner * leaf-roller	9	ES	LEB
• <i>Argyrotaenia velutinana</i> (Walker) * red-banded leaf-roller	15	CK	UWD
• <i>Choristoneura rosaceana</i> (Harris) * oblique-banded leaf-roller	15	CK	UWD
• <i>Cydia pomonella</i> (Linnaeus) * codling moth	15	CK	UWD
• <i>Grapholitha molesta</i> (Busck) * Oriental fruit moth	15	CK	UWD
• <i>Paralobesia viteana</i> (Clemens) * grape berry moth	15	CK	UWD
• <i>Platynota flavedana</i> (Clemens) * variegated leaf-roller	15	CK	UWD
• <i>Platynota idaeusalis</i> (Walker) * tufted apple bud-moth	15	CK	UWD
• <i>Spilonota ocellana</i> (Denis & Schiffermuller) * eye-spotted b-m.	15	CK	UWD
Family Hesperiidae (common skippers)			
• <i>Epargyreus clarus</i> (Cramer) * silver-spotted skipper	15	CK	UWD
• <i>Erynnis baptisiae</i> Forbes * wild indigo duskywing skipper	15	CK	UWD
• <i>Pholisora catullus</i> (Fabricius) * common sootywing skipper	15	CK	UWD
• <i>Poanes zabulon</i> Boisduval & LeConte * southern golden s.	15	CK	UWD
• <i>Polites coras</i> (Cramer) [= <i>Polites peckius</i> Kirby] * yellowpatch or Peck's skipper	15	CK	UWD
Family Papilionidae (swallowtails)			
• <i>Battus philenor</i> (Linnaeus) * pipevine swallowtail	15	CK	UWD
• <i>Papilio cresphontes</i> Cramer * giant swallowtail	15	CK	UWD
• <i>Papilio glaucus</i> Linnaeus * tiger swallowtail	15	CK	UWD
• <i>Papilio polyxenes asterius</i> Stoll * black swallowtail	15	CK	UWD
• <i>Papilio troilus</i> Linnaeus * spicebush swallowtail	15	CK	UWD
Family Pieridae (whites & sulfurs)			
• <i>Colias eurytheme</i> Boisduval * orange sulfur	15	CK	UWD
• <i>Colias philodice</i> Godart * common sulfur	15	CK	UWD
• <i>Pieris rapae</i> (Linnaeus) * cabbage white	15	CK	UWD

	SOURCE	LOCATION	HABITAT
Family Lycaenidae (gossamer-winged butterflies)			
• <i>Celastrina ladon ladon</i> (Cramer) * spring azure	15	CK	UWD
• <i>Everes comyntas</i> Godart * eastern tailed blue	15	CK	UWD
• <i>Lycaena phlaeas americana</i> Harris * American copper	15	CK	UWD
Family Libytheidae (snout butterflies)			
• <i>Libytheana bachmanii</i> Kirtland * snout butterfly	15	CK	UWD
Family Danaidae (milkweed butterflies)			
• <i>Danaus plexippus</i> (Linnaeus) * monarch butterfly	15	CK	UWD
• danaid sp. * milkweed butterfly	17a	ES	UWD
Family Satyridae (nymphs & satyrs)			
• <i>Cercyonis pegala</i> (Fabricius) * common wood nymph	15	CK	UWD
• <i>Megisto cymela</i> (Cramer) * little wood satyr	15	CK	UWD
Family Nymphalidae (brush-footed butterflies)			
• <i>Asterocampa celtis</i> (Boisduval & LeConte) * hackberry butterfly	15	CK	UWD
• <i>Asterocampa clyton</i> (Boisduval & LeConte) * tawny emperor	15	CK	UWD
• <i>Boloria bellona bellona</i> (Fabricius) * meadow fritillary	15	CK	UWD
• <i>Enodia anthesdon</i> Clark * northern pearly eye	15	CK	UWD
• <i>Junonia coenia</i> Hübner * buckeye	15	CK	UWD
• <i>Limenitis archippus</i> (Cramer) * viceroy	15	CK	UWD
• <i>Limenitis arthemis astyanax</i> (Fabricius) * red-spotted purple	15	CK	UWD
• <i>Nymphalis antiopa</i> (Linnaeus) * mourning cloak	15	CK	UWD
• <i>Nymphalis milberti</i> (Godart) * Milbert's tortoise shell	15	CK	UWD
• <i>Phyciodes tharos</i> (Drury) * pearl crescent	15	CK	UWD
• <i>Polygonia interrogationis</i> (Fabricius) * question-mark	15	CK	UWD
• <i>Speyeria</i> sp. Scudder * fritillary or silverspots	15	CK	UWD
• <i>Vanessa atalanta rubra</i> (Fruhstorfer) * red admiral	15	CK	UWD
• <i>Vanessa cardui</i> (Linnaeus) * painted lady	15	CK	UWD
• <i>Vanessa virginiensis</i> (Drury) * American painted lady	15	CK	UWD
Family Pyralidae (pyralid moths)			
• <i>Crambus</i> sp. Fabricius, 1798 * close-wings or grass moth	15	CK	UWD
• <i>Euzophera semifuneralis</i> (Walker) * American plum borer	15	CK	UWD
• <i>Ostrinia nubilalis</i> (Hübner) * European corn borer	15	CK	UWD
• <i>Plodia interpunctata</i> (Hübner) * Indian meal moth	15	CK	UWD
Family Geometridae (geometer moths)			
• <i>Euchroea albovittata</i> Guenée * white-striped black moth	15	CK	UWD
• <i>Haemotopsis grataria</i> Fabricius * chickweed geometer moth	15	CK	UWD
• <i>Synchlora aerata</i> Fabricius * green geometrid moth	15,17a	CK,ES	UWD
Family Lasiocampidae (tent caterpillars & lappet moths)			
• <i>Malacosoma americanum</i> (Fabricius) * eastern tent caterpillar	15	CK	UWD
• <i>lasiocampid</i> sp. * lappet moth	17a	ES	UWD
Family Saturniidae (giant silkworm moths)			
• <i>Antheraea polyphemus</i> (Cramer) * polyphemus moth	15	CK	UWD
• <i>Automeris io</i> (Fabricius) * io moth	15	CK	UWD
• <i>Platysamia cecropia</i> (Linnaeus) * cecropia moth	15	CK	UWD
Family Sphingidae (sphinx or hawk moths)			
• <i>Manduca quinquemaculata</i> (Haworth) * tomato hornworm	15	CK	UWD
• <i>Protoparce sexta?</i> (Linnaeus, 1763) * sphinx moth	15	CK	UWD
• sphingid spp. * clear-wing hummingbird & sphinx moths	15	CK	UWD
Family Notodontidae (prominent)			
• <i>notodontid</i> sp. * prominent moth	15	CK	JWD

	SOURCE	LOCATION	HABITAT
Family Lymantriidae [=Liparidae] (tussock moths)			
• <i>Hemerocampa leucostigma</i> (Smith) * white-marked tussock moth	15	CK	UWD
Family Arctiidae (tiger moths)			
• <i>Estigmene</i> sp.? Hübner * white moth	15	CK	UWD
• <i>Hyphantria cunea</i> (Drury) * fall webworm	15	CK	UWD
• <i>Isia isabella</i> (Smith) * banded woolybear	15	CK	UWD
Family Ctenuchidae (ctenuchid moths)			
• <i>Ctenucha virginica</i> (Charpentier) * ctenuchid Virginia moth	15	CK	UWD
Family Noctuidae (noctuid moths)			
• <i>Autographa</i> sp. Hübner * looper moth	15	CK	UWD
• <i>Catocala</i> sp. Schrank * underwing moth	15	CK	UWD
• <i>Heliothis zea</i> (Boddie) * corn earworm	15	CK	UWD
• <i>Papaipema nebris</i> (Guenee) * stalk borer	15	CK	UWD
• noctuid sp. * cutworm moth	15,17a	CK,ES	UWD
Family Agaristidae (forester moths)			
• <i>Alypia</i> sp. Hübner * forester moth	15	CK	UWD
ORDER HYMENOPTERA (sawflies, ants, bees, & wasps)			
Suborder Symphyta (sawflies)			
Family Tenthredinidae (common sawflies)			
• tenthredinid sp. * sawfly	15	CK	UWD
Family Siricidae (horntails)			
• <i>Tremex</i> sp.? Jurine * horntail sawfly	15	CK	UWD
Suborder Apocrita (ants, bees, & wasps)			
Family Braconidae (braconids)			
• braconid sp. * braconid wasp	15	CK	UWD
Family Ichneumonidae (ichneumons)			
• <i>Megarhyssa</i> sp.? Ashmead * ichneumon wasp	15	CK	UWD
• ichneumonid spp. [3] * ichneumon wasps	15,17a	CK,ES	UWD
Family Evaniidae (ensign wasps)			
• evaniid sp. * ensign wasp	17a	ES	UWD
Family Proctotrupidae (proctotrupids)			
• proctotrupid sp. * parasitic wasp	15	CK	UWD
Family Eurytomidae (seed chalcids)			
• eurytomid sp. * chalid seed wasp	15	CK	UWD
Family Torymidae (torymids)			
• torymid sp. * parasitic wasp	15	CK	UWD
Family Cynipidae (cynipids or gall wasps)			
• <i>Amphibolips</i> sp.? Reinhard * oak apple gall	15	CK	UWD
• <i>Diastrophus cuscuteformis</i> Osten Sacken * blackberry seed gall	15	CK	UWD
• <i>Diastrophus nebulosus</i> (Osten Sacken) * blackberry gall-maker	15	CK	UWD
Family Chrysididae (cuckoo wasps)			
• chrysidid sp. * cuckoo wasp	15	CK	UWD
Family Tiphiidae (tiphiid wasps)			
• tiphiid sp. * tiphiid wasp	15,17a	CK,ES	UWD
Family Formicidae (ants)			
Subfamily Formicinae (carpenter ants & allies)			
• <i>Acanthomyops</i> sp. Mayr * foundation ant	15	CK	UWD
• <i>Camponotus</i> spp. Mayr [3] * carpenter ants	15	CK	UWD
• <i>Formica</i> spp. Latreille [3] * mound builder ants	15	CK	UWD
• <i>Lasius</i> sp. Fabricius * winged ant	15	CK	UWD
• <i>Prenolepis</i> sp. Mayr * ant	15	CK	UWD

	SOURCE	LOCATION	HABITAT
Subfamily Myrmecinae (common ants)			
• <i>Cratomastix</i> sp. Lund * small black ant	15	CK	UWD
• <i>Leptothorax</i> sp. Mayr * ant	15	CK	UWD
• <i>Monomorium pharaonis?</i> (Linnaeus) * Pharaoh ant	15	CK	UWD
• <i>Myrmicaspis</i> . Latreille * ant	15	CK	UWD
• <i>Tetramorium caespitum</i> (Linnaeus) * pavement ant	15	CK	UWD
Subfamily Ponerinae (ponerin ants)			
• <i>Ponera</i> sp. Latreille * ant	15	CK	UWD
Family Eumenidae (potter wasps)			
• <i>Eumenes</i> sp.? Fabricius * potter wasp	15	CK	UWD
• <i>Monobia</i> sp.? De Saussure * potter wasp	15	CK	UWD
Family Vespidae (vespid wasps)			
• <i>Vespa crabro germanica</i> (Christ) * giant hornet	15	CK	UWD
• <i>Vespa germanica</i> (Fabricius) * picnic wasp	15	CK	UWD
• <i>Vespa maculata</i> (Linnaeus) * bald-faced hornet	15	CK	UWD
• <i>Vespa maculifrons?</i> (Buysson) * yellowjacket wasp	15	CK	UWD
• <i>polistin</i> sp. * paper wasp	15	CK	UWD
Family Sphecidae (sphecid wasps)			
• <i>Chalybion</i> sp.? Dehlnbom * thread-waisted wasp	15	CK	UWD
• <i>Sphecius speciosus</i> (Drury) * cicada-killer wasp	15	CK	UWD
Family Colletidae (yellow-faced & plasterer bees)			
• <i>colletid</i> sp. * colletid bee	15	CK	UWD
Family Halictidae (halictid bees)			
• <i>Agapostemon</i> sp. Guérin-Meneville, 1844 * halictid bee	15	CK	UWD
• halictid spp. [2] * halictid bees	15	CK	UWD
Family Andrenidae (andrenid bees)			
• andrenid sp. * andrenid bee	15	CK	UWD
Family Megachilidae (leafcutting bees)			
• megachilid sp. * leafcutting bee	15	CK	UWD
Family Anthophoridae (digger, cuckoo, & carpenter bees)			
• <i>Xylocopa virginica?</i> (Linnaeus) Drury * large carpenter bee	15	CK	UWD
• nomadid sp.? * cuckoo bee	15	CK	UWD
• anthophorid spp. [2] * digger bees	15	CK	UWD
Family Apidae (bumble & honey bees)			
• <i>Apis mellifera</i> Linnaeus * honey bee	15	CK	UWD
• <i>Bombus</i> sp. Latreille * large bumblebee	15	CK	UWD

PHYLUM TARDIGRADA (water bears)

ORDER (CLASS) EUTARDIGRADA

Family Macrobiotidae (naked freshwater tardigrades)

• macrobiotid sp. Schultze * water bear	9	ES	LEB
---	---	----	-----

PHYLUM BRYOZOA [=ECTOPROCTA] (bryozoans)

CLASS PHYLACTOLAEMATA

ORDER PLUMATELLIDA

Family Plumatellidae

• <i>Plumatella casmiana</i> Oka, 1907 * bryozoan	9	ES	LEB, VES
• <i>Plumatella repens</i> (Linnaeus, 1758) Allman, 1844 * spreading b.	9	ES	VES
Family Lophopodidae			
• <i>Lophopodella carteri</i> (Hyatt, 1868) Rousset, 1904 * sac b.	9	ES	LEB
• <i>Pectinatella magnifica</i> (Leidy, 1851) Kraepelin, 1887 * slimy b.	4,9,17	ES	LEB, VES
• lophopodid sp.* bryozoan	12	ES	LEB

17. Present Study (observations by the authors, 1980-1999; including unpublished observations by Carmen E. Trisler, Wittenberg University, 1987-1999 [17a], Roger Thoma, Ohio EPA, 1993 [17b], and L. D. Delorme, National Water Research Institute, Canada Centre for inland Waters, 1994 [17c]; and records of Ohio State University, Museum of Zoology & Ohio Natural Heritage Program, ODNR, 1962-1987 [17d], provided by David L. Stansbery & Debra K. Woischke).

LOCATION CODES:

- CK – Old Woman Creek watershed upstream of the estuary
ES – Old Woman Creek Estuary (including watershed within boundaries of NERR)
LE – Lake Erie, principally nearshore waters of Erie County and western Lorain County, Ohio
TR – Tributary watersheds to Lake Erie other than Old Woman Creek, principally of eastern Erie County and western Lorain County, Ohio

HABITAT CODES:

- LEB – Lake Erie estuaries, benthic habitats
LEP – Lake Erie estuaries, planktonic habitats
LKB – Lake Erie, benthic habitats
LKP – Lake Erie, pelagic habitats
LKS – Lakeshore
OGS – Open grass & shrub field
RAV – Ravines
ROK – Rocky terrains
RUL – Rural dwellings
SPD – Shallow ponds
STM – Streams
SWF – Swamp forests
UWD – Upland watershed
VES – Vegetated estuary, epiphytic
WET – Wetlands
WLW – Woodlands, near water

Appendix B

Checklist of Invertebrate Fauna of Old Woman Creek Estuary, Watershed, and Adjacent Waters of Lake Erie

**CHECKLIST OF INVERTEBRATE FAUNA OF OLD WOMAN CREEK ESTUARY,
WATERSHED, AND ADJACENT WATERS OF LAKE ERIE**

PHYLUM SARCOMASTIGOPHORA (PROTOZOA)
Subphylum Mastigophora

CLASS DINOFLAGELLATA

Order Gymnodinida

Gymnodinium fungiforme

CLASS PHYTOMASTIGOPHORA

Order Cryptomonadida

- Chilomonas* sp.
- Chroomonas norstedtii*
- Cryptomonas compressa*
- Cryptomonas erosa*
- Cryptomonas obovata*
- Cryptomonas ovata*
- Cryptomonas reflexa*
- Cryptomonas tenuis*
- Cyathomonas truncata*
- Planonephros parvula* [= *Sennia parvula*]
- Rhodomonas lacustris*
- Rhodomonas lens*
- Rhodomonas minuta*

Order Chrysomonadida

- Anthophysa steinii*
- Anthophysa vegetans*
- Chromulina nana*
- Dinobryon bavaricum*
- Dinobryon sertularia*
- Mallomonas elegans*
- Mallomonas intermedia*
- Microglena* sp.
- Monas guttula*
- Monas socialis*
- Ochromonas ludibunda*
- Oikomonas termo*
- Physomonas vestita*
- Spumella* sp.
- Stokesiella* sp.

Order Volvocida

- Carteria globosa*
- Chlamydomonas excavata*
- Chlamydomonas globosa*
- Chlamydomonas gracilis*
- Chlamydomonas monadina*
- Chlamydomonas reinhardtii*
- Chlamydomonas subasympmetrica*
- Chlorogonium elongatum*
- Chlorogonium euchlrorum*
- Chlorogonium hyalinum*
- Pandorina morum*
- Phacotus lenticularis*
- Pteromonas* sp.

LOCATION CODES:

CK – Old Woman Creek watershed upstream of the estuary

ES – Old Woman Creek Estuary (including watershed within boundaries of NERR)

LE – Lake Erie, principally nearshore waters of Erie County and western Lorain County, Ohio

TR – Tributary watersheds to Lake Erie other than Old Woman Creek, principally of eastern Erie County and western Lorain County, Ohio

Appendix D

Alphabetized List of Invertebrate Fauna of Old Woman Creek Estuary, Watershed, and Adjacent Waters of Lake Erie by Common Name

**ALPHABETIZED LIST OF INVERTEBRATE FAUNA OF OLD WOMAN CREEK
ESTUARY, WATERSHED, AND ADJACENT WATERS OF LAKE ERIE**
