Table S1

Introduction

Literature values of wetland CH₄ and CO₂ measurements were compiled from Petrescu et al. (2015) as well as more recently published studies and grouped by latitude and wetland type. Only annual or near-annual eddy covariance studies measuring both CH₄ and CO₂, from restored or natural wetlands, in addition to a subtropical inundated pasture (Chamberlain et al., 2017b; Chamberlain et al., 2016) are reported here. Interpolations based on seasonal measurements, where necessary, are detailed in Petrescu et al. (2015).

<i>Climate Zone</i>	<i>Site name, location</i>	<i>Coordinates</i>	<i>Ecosystem description</i>	<i>Measurement period</i>	$gC\text{-}CO_2 m^{-2}yr^{-1}$	$CO_2 (S/Y)$	$gC\text{-}CH_4 m^{-2}yr^{-1}$	$CH_4 (S/Y)$	<i>Citation</i>
Temperate	Plotnikovo, RUS	56° 51' N, 82° 58' E	Mesotrophic fen	10 May 1999 - 16 September 1999	-108.00	S	19.52	S	(Friborg et al., 2003)
	Spreewald, DEU	51°53' N, 14°02' E	Treed wetland (marsh)	CO2: 8 April - 23 May 2011; CH4: 2011	-122.73	Y	0.20	S	(Tiemeyer, 2013)

Table S1. Literature values of wetland mean annual (where there are multiple years reported) CH₄ and CO₂ eddy covariance measurements compiled from Petrescu et al. (2015), as well as more recently published studies. (S) denotes seasonal measurement interpolated to annual budget, (Y) denotes annual measurement. *Reported as “near-neutral”.
