SUMMARY OF FOREIGN AND DOMESTIC
FISHERIES SURVEILLANCE AND
ENFORCEMENT ACTIVITIES
IN ALASKAN WATERS

1977

INTRODUCTION

The Annual Report for the Alaska Law Enforcement Branch of the National Marine Fisheries Service - 1977 is a comprehensive summary of foreign and domestic fisheries surveillance and enforcement activities conducted by the National Marine Fisheries Service and the U.S. Coast Guard in Alaskan waters. Activities of the Law Enforcement Branch and the fishery laws enforced throughout Alaskan waters are reviewed and summarized.

This report was prepared by:

Mark A. Miller

National Marine Fisheries Service

Law Enforcement Branch

P.O. Box 1668

Juneau, Alaska 99802

Information presented in this Annual Report is from surveillance data, enforcement proceedings, and reports generated by both foreign and domestic sources.

The area covered by this report and general terms and abbreviations used throughout are presented in the Appendix.

The author of this report would like to thank the individuals who helped prepare the text, tables, charts, and computer listings used in this report.

ALASKA ENFORCEMENT

The Law Enforcement Branch of the National Marine Fisheries Service, Alaska Region, in Juneau, Alaska has joint responsibility with the U.S. Coast Guard for the enforcement of fisheries regulations, and international laws and treaties, as well as monitoring of foreign fishing activity off Alaskan shores. Additionally, the enactment of the Fishery Conservation and Management Act of 1976 extended the enforcement mandate from the limits of the 12-mile Contiguous Fishery Zone (CFZ) to 200 miles off Alaska and established total control over the fishery resources along Alaska's 6,500 miles of sea-facing coastline and the 550,000 square miles of adjacent Continental Shelf. The long range objectives established by these fisheries laws include:

1. To insure that foreign and U.S. fishermen comply with regulatory provisions and treaties designed to achieve effective management and conservation of the living marine resources off Alaska. Effective compliance of those regulations would enable the restoration of many fishery resources. The end result will allow U.S. fishermen to harvest more of the resources with safeguards and advantages over the foreign fleets provided by regulations.
2. To provide key fishery officials with continuous detailed data concerning the foreign fisheries off Alaska, to allow proper management of the living marine resources, and to facilitate knowledgeable formulation of national and international fisheries management policies of the United States.

Law Enforcement Branch

The Law Enforcement Branch expanded its activities over 1976 levels to meet increased responsibilities of the Fishery Conservation and Management Act of 1976. The Law Enforcement Branch utilized \$1.07 million, a 5 percent increase over 1976. Within this budget, 23 personnel from stations in Juneau, Sitka, and Kodiak accomplished the enforcement mission (Table 1).

Alaska Fisheries Law

On March 1, 1977, the United States embarked on a new era of fisheries management off its shores with the implementation of the Fishery Conservation and Management Act (FCMA) of 1976. Under the FCMA, five preliminary fisheries management plans (PMPs) were developed for the Alaska area and regulations promulgated to implement them. They included the Gulf of Alaska trawl fishery, Bering Sea and Aleutian Island trawl and herring gillnet fishery, sablefish fishery, crab fishery, and snail fishery. Under these preliminary management plans, 1,658,900 metric tons of groundfish and shellfish were allocated to foreign nations off Alaska.

Six international fisheries agreements and four conventions were in force during 1977 (Table 2). The U.S.S.R., Poland, and Taiwan renegotiated treaties in 1976, recognizing rule under FCMA. These agreements became effective February 28, 1977, and unless altered or deleted at a

2-year review milestone, will remain in effect until July 1, 1982. South Korea terminated their 1972 agreement prior to the expiration date of December 31, 1977, by renegotiating a new treaty signed January 4, 1977, that took effect March 3, 1977. This agreement was subject to the same review and expiration terms as the U.S.S.R., Taiwan, and Poland agreements. Japan finalized a new treaty recognizing FCMA rule on March 18, 1977. Japan continued to operate under the 1974 U.S./Japan agreement prior to November 29, 1977, when the new agreement became effective. This treaty was subject to the same 2-year review period as other agreements but the expiration date was December 31, 1982. Canada signed a new treaty on February 24, 1977, which took effect July 26 and terminated December 31, 1977. Mexico entered into an agreement with the U.S. for a first time Alaskan fishery beginning September 27, 1977, but failed to exercise provisions of that agreement in 1977. All agreements were universal in acknowledging the U.S. 200 mile fisheries zone and the exclusive management authority it authorized.

The International North Pacific Fisheries Convention (INPFC) was the only convention receiving action in 1977. On February 10, 1977, the United States announced that it would terminate its participation in INPFC in 1 year, ending an association in the three-nation organization which dated back to 1953. This step was taken to meet the mandates of the FCMA and to invite renegotiations. Termination was later rescinded in 1978.

Enforcement Activities

Beginning March 1, 1977, fisheries law enforcement achieved a new degree of flexibility in dealing with infractions of federal law and fisheries agreements with foreign nations. Prior to March 1, enforcement units were somewhat limited in their actions once a violation was detected. If a vessel was detected violating a U.S. law, the enforcement unit had the option of giving the vessel a verbal warning or seizing it for further prosecution in U.S. District Court. If a vessel was detected violating a provision of a bilateral agreement, the incident was documented and the protest sent to the flag government through diplomatic channels. If infractions of the INPFC were detected, the alleged violating vessel was often seized but turned over to the flag government for prosecution.

Under the FCMA, a variety of enforcement actions were possible for detected infractions of the regulations. The enforcement unit had the option of issuing a Citation for minor infractions. This is equivalent to a written warning but may be used as a basis for future enforcement actions against that vessel. For more serious violations, the option existed to issue a Report of Violation, which provides for the assessment of civil penalties and possible permit sanctions. For major infractions, the vessel may be seized and prosecuted in U.S. court.

Fishery Patrols

U.S. fishery patrols in the North Pacific Ocean and Bering Sea off Alaska in 1977 were conducted jointly by the National Marine Fisheries Service, Law Enforcement Branch, and the U.S. Coast Guard (Table 3). There were 16 enforcement agents deployed aboard U.S. Coast Guard platforms through 1977, with those vessels covering 163,207 miles by ship and 135,230 miles by aircraft, an increase of 38,103 miles from 1976 by ship and a decrease of 238,351 miles by aircraft (Tables 4 and 5). This was a total patrol mileage decrease of 40 percent over 1976 from 498,685 miles to 298,437 miles. Aircraft made 44 percent of all foreign sightings, while covering 45 percent of the total patrol miles. There were 893 ship days used, compared to 694 ship days in 1976. There were 5,035 sightings of foreign fishing vessels--a decrease of 2,108 or 30 percent over 1976. These figures overall appear to lessen the total patrol coverage but in reality demonstrate a shift in emphasis to a more complete enforcement posture. During 1977, the Coast Guard deployed an additional 7 vessels to Alaskan fisheries patrols and, with the 12 vessels already involved with Alaska patrols from 1976, increased ship patrol days and miles by 30 percent. This extra presence resulted in a 150 percent increase to the number of foreign boardings, as well as a strong showing by the United States that the mandate of complete fisheries management and enforcement dictated by the FCMA would be carried out. As in previous years, these same patrols also enforced provisions of international fishery agreements and associated U.S. laws (Table 2).

Aerial patrols were conducted by H-3 helicopters from the Coast Guard air stations at Sitka and Kodiak and by C-130 (Lockheed Hercules)

turbo prop aircraft from the Coast Guard air station on Kodiak Island. Surface patrols were conducted by Coast Guard Cutters BOUTWELL, CAMPBELL, CAPE HENlopen, CAPE JELLISON, CITRUS, CLOVER, CONFIDENCE, IRONWOOD, JARVIS, MELLON, MIDGETT, MORGENTHAU, MUNRO, PLANETREE, RESOLUTE, RUSH, SEDGE, STORIS, and SWEETBRIER. Shipborne helicopters increased their role aboard 378-foot Coast Guard cutters, making 220 flights for a total of 353 flight hours--an increase of 11 percent. There were 662 boardings made of foreign vessels in 1977 compared to 267 boardings in 1976 (Table 6). The number of boardings per nation were:

Japan	522
Soviet Union	86
South Korea	46
Taiwan	4
Poland	1
Canada	3

Observer Program

The U.S. program to place U.S. scientific and technical observers aboard foreign vessels continued in 1977 but changed from a voluntary to mandatory program for foreign vessels operating within the Fishery Conservation Zone. Beginning in March, the United States was able to select particular vessels by area and target species for sampling. Collected data began to be used as more of a management/enforcement tool where weekly foreign catch reports were corrected by area and vessel type with observer data, when observer presence was greater than a

certain percentage of the total number of vessels by type in an area for a given reporting period. This "best blend" procedure was employed wherever possible to project the most accurate level of foreign catch and provide a more accurate picture as to the fulfillment of quotas.

Observers were assigned to 143 foreign vessels in 1977. The observers spent 14,351 days aboard foreign vessels, covering nearly 26 percent of the foreign fishing fleet off Alaska. Observer coverage varied by month, nation, and vessel type. From 5 to 20 percent of the foreign fleets off Alaska had observers during the months from April to December. The amount of coverage by nation was 7 to 9 percent of the total number of vessels present with the exception of the short Polish effort which received 25 percent coverage during the fleet's 3-month Alaskan tour. No observers boarded Taiwanese vessels. Observer coverage was deployed in proportion to fleet size with the resultant breakdown divided into:

Japan	79 percent
U.S.S.R.	14 percent
South Korea	4 percent
Poland	3 percent

Most observer sampling was from trawlers (63 pct.) but additional coverage was extended to groundfish factoryships (28 pct.) and crab factoryships and independent crab pot vessels (31 pct.). There was no coverage aboard any foreign longliners or Taiwanese vessels during 1977.

Enforcement Actions

Both foreign and domestic fishermen violated various fishery laws during 1977 (Tables 7 and 8 and Appendix). A total of 116 foreign and domestic violations were detected. Over 90 percent of the violations occurred between March and October, with a high of 21 violations per month in July and August. Over one-half of the violations were committed against the Fishery Conservation and Management Act and two-thirds of those resulted in the issuance of a Citation. Twenty-seven Reports of Violation were recorded, as well as one seizure under FCMA and one seizure prior to the onset of FCMA. Twenty-nine violations of the International Pacific Halibut Convention regulations by domestic vessels were detected.

Foreign Violations

Most of the enforcement actions against foreign vessels in 1977 were for violations of the FCMA. In 1977, 51 Citations were issued to foreign vessels for minor violations of the regulations; 31 were issued to Japan, 7 to the U.S.S.R., 11 to South Korea, and 2 to Taiwan. Twenty-seven Reports of Violation were issued to foreign vessels for more serious violations; 16 were issued to Japan, 5 to the U.S.S.R., 4 to South Korea, and 2 to Taiwan. The one FCMA seizure in 1977 was against the Taiwanese vessel HIGHLY No. 301, which was seized on September 1, 1977, for retention of species for which Taiwan did not have an allocation. The case was prosecuted by the U.S. Attorney, Anchorage, and an out-of-court settlement was reached in the amount of \$335,000.

Additional violations by foreign vessels were identified in 1977. In January, the FUKUYOSHI MARU No. 75 was seized for violating both the Bartlett Act and the International North Pacific Fisheries Convention for possession of Tanner crab shells and frozen salmon. The salmon charge was later dropped but a \$250,000 penalty was assessed against the vessel for the Tanner crab violation. In February, two Soviet vessels violated the Contiguous Fishery Zone by conducting transfer operations in a closed loading zone area. In May, a Canadian halibut vessel was found in violation of IPHC regulations and fishing in the U.S. zone.

Domestic Violations

Domestic violations were prosecuted under the International Pacific Halibut Convention (Tables 7 and 8). A total of 29 IPHC violations were detected.

Gear Conflicts

Five gear loss cases were initiated in 1977 (Table 9). All conflict reports were filed against Japanese vessels and, in one of the reports, no specific vessel was identified. The first conflict report was from the SANDRA L who reported a loss of 17 longline skates southeast of Cape Suckling in the Gulf of Alaska. The trawler KOSHIN MARU No. 11 was identified as the foreign vessel causing the loss. Prompt settlement was made for \$4,616.39. The TULIP KING reported loss of 10 halibut

skates to Japanese longline gear set by the CHOYO MARU No. 81. No settlement had been reached by the end of 1977 pending more information. The crab pot vessel EXPRESS reported the loss of one crab pot and associated gear to the trawler MATSU MARU No. 52 but weather conditions were suspected to be the true cause of loss and the case was closed. The PEGGY JOE also lost crab pots but the limited nature of the loss and the lack of positive identification of a suspect vessel caused the action to be closed as unfounded. The final action of the year was initiated by the QUEEN who lost longline gear valued at \$3,265.60. The KONGO MARU was the suspect conflict vessel and, as in the first action of 1977, full settlement was made in a short period of time.

DOMESTIC FISHERIES REVIEW

The domestic catch of fish and shellfish species off Alaska increased in 1977, cornering 13 percent of the record 5.2 billion pound total catch by U.S. fishermen nationally. The value of the Alaskan catch was \$326.2 million, the largest in the nation. This record catch was composed of halibut, herring, groundfish, sablefish, salmon, king and Tanner crab, and shrimp. Over 275 million pounds of salmon valued at \$182 million were landed, leading the way in value for all species. Crab and shrimp comprised another 314 million pounds. Tanner crab landings were increased 22 percent by volume and 91 percent in value to lead the many increases to catch and value off Alaska, while shrimp landings decreased the most, down by 11 percent in volume and 10 percent in value.

FOREIGN FISHERIES REVIEW

Alaskan waters again produced one of the world's major fishing areas attracting Japan, the U.S.S.R., South Korea, Taiwan, and Poland (Figs. 1 and 2). The total foreign fleet numbered 1,074 vessels, including factory fleets for pollock, salmon, flounder, and Tanner crab; trawlers for groundfish; gillnet vessels for salmon; pot vessels for crab and snails; and longliners for sablefish. The number of vessels present in Alaskan waters ranged from 118 to 654 per month (Figs. 3, 4, and 5 and Tables 10 and 11). These vessels exerted an effort of 76,761 vessel days (210.6 years) to land the total foreign catch from Alaskan waters of 1,510,050 metric tons of fish and crab (Tables 12 and 13). This catch was reduced 8 percent from 1976 levels (Figs. 6 and 7 and Table 14). This catch was 91 percent of the total 1,658,900 metric ton allocation assigned to foreign vessels off Alaska in 1977.

Catch and Allocation

Foreign nations landed 1.51 million metric tons of fish and crab off Alaska in 1977, a reduction of 8 percent from 1976 levels but 91 percent of total allocations (Figs. 6 and 7 and Tables 13 and 14). The catch was taken 82 percent by Japan, 12 percent by the Soviet Union, 6 percent by South Korea, and less than 1 percent by the combined landings for Taiwan and Poland. The Bering Sea-Aleutian Islands area accounted for 87 percent of the total catch and the Gulf of Alaska 13 percent.

For Foreign Nations Fishing Alaskan Waters, 1972-77

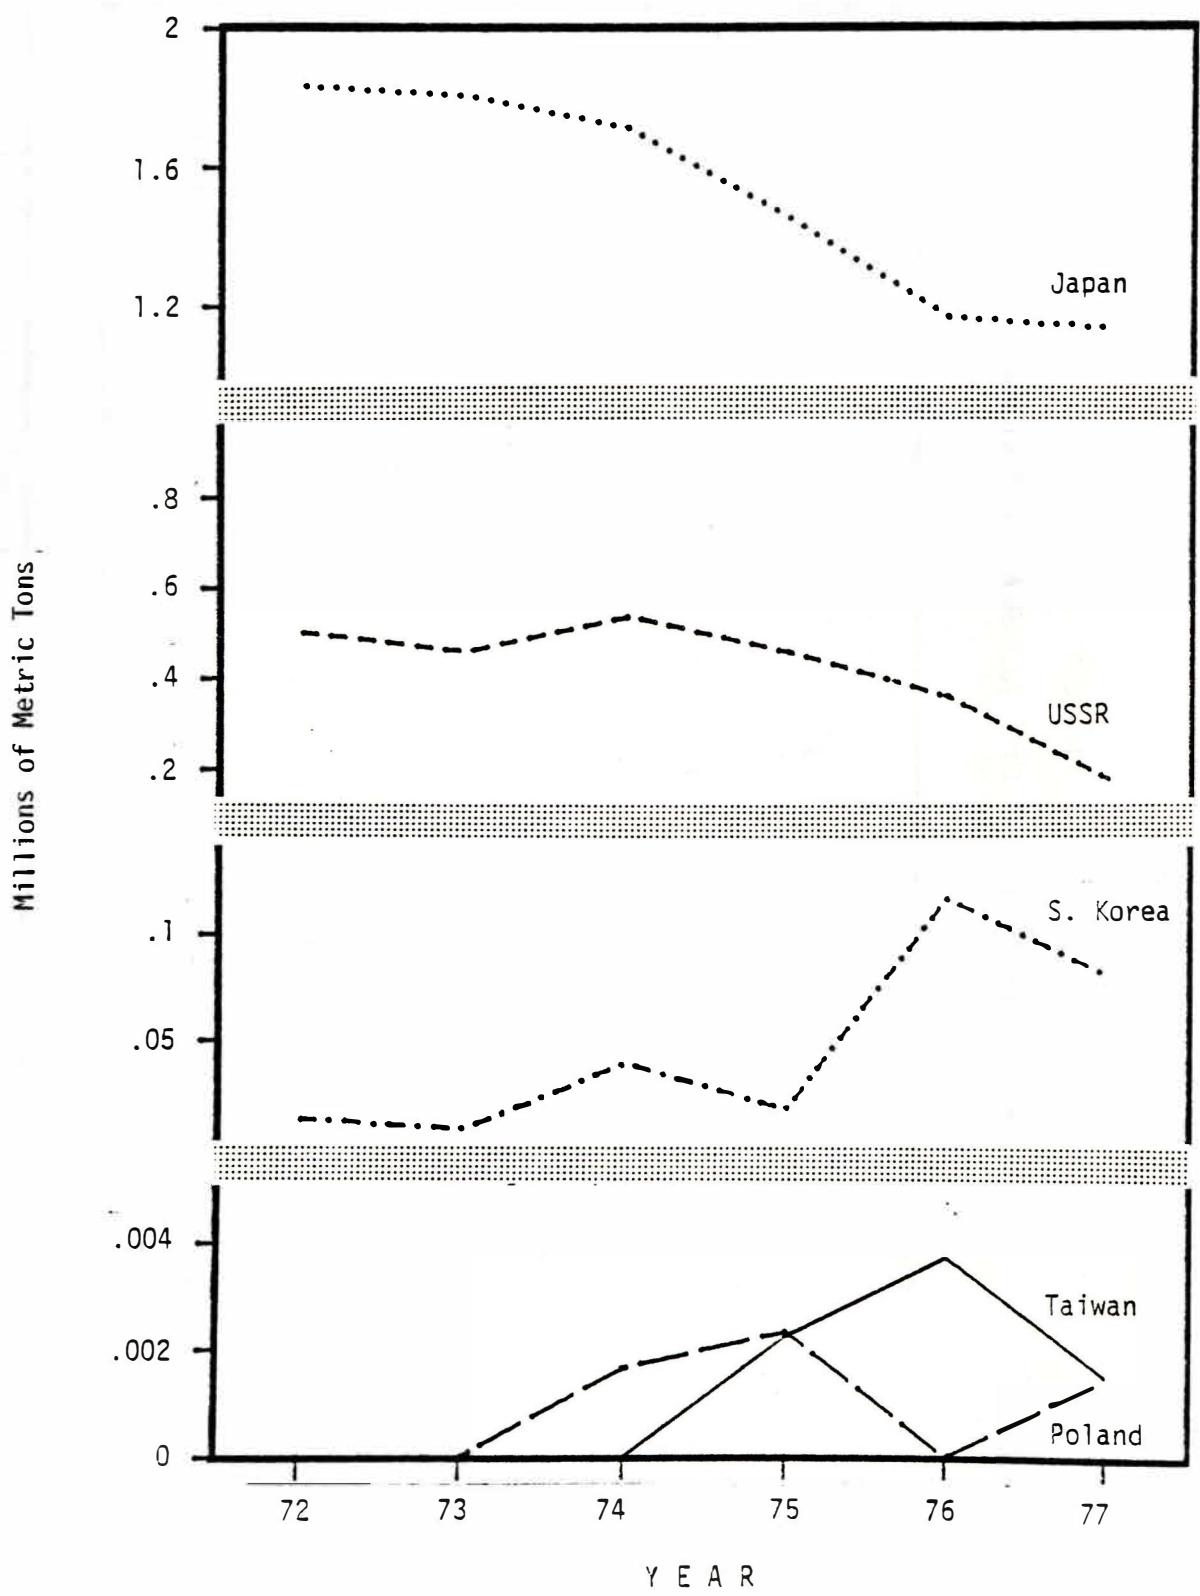

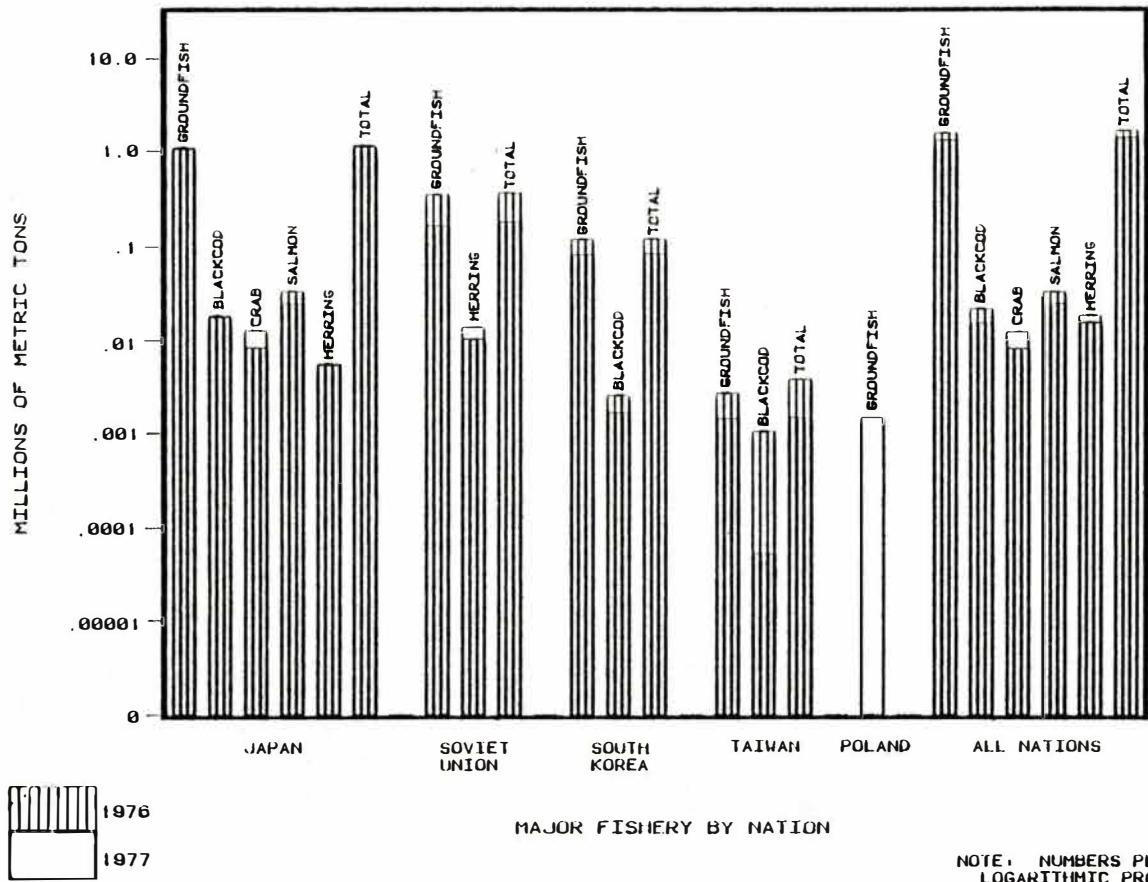

Figure 7

TOTAL FOREIGN CATCH BY NATION AND MAJOR FISHERY
COMPARING 1976 TO 1977

Pollock comprised 73 percent of the catch, followed by 9 percent flounders and 18 percent miscellaneous species of fish and crab. All groundfish species combined formed 97 percent of the total foreign catch off Alaska. The largest percentage decrease to foreign landings was by the U.S.S.R. A 31 percent increase to herring landings did little to offset the 51 percent reduction to the Soviet catch in 1977 from 1976 levels. The Soviet decrease was 40 percent more than the losses by all other nations combined. The Japanese catch increased 6 percent (+69,508 m.t.), South Korean catch decreased 26 percent (-30,471 m.t.), and Taiwanese catch decreased 71 percent (-2,637 m.t.). Poland did not fish off Alaska in 1976. Overall, only Tanner crab and herring landings showed increases over 1976.

Vessel Effort

Five foreign nations sent vessels to Alaskan waters (see Appendix). Japan again dominated the total foreign fleet, supplying over 80 percent of the vessels and associated fishing effort. Japan dispatched 729 vessels, Soviet Union 297 vessels, South Korea 29 vessels, Taiwan 5 vessels, and Poland 14 vessels. The Bering Sea was the area where a majority of Japanese and all of the Taiwanese vessels operated, while most of the Soviet and South Korean and all of the Polish vessels operated in the Gulf of Alaska.

The total number of foreign vessels off Alaska varied greatly by month (Tables 10 and 11). Japan's Bering Sea fleet was the most diverse

of all foreign fleets and varied in number from 35 to 591 vessels in a given month. The Soviets were present in numbers from 3 to 83 per month. Only Japan and the Soviet Union had vessels present every month of 1977. South Korean vessels were absent during the first 2 months but thereafter increased in numbers to a high of 21 in October before decreasing to 7 by yearend. Taiwan fished intermittently throughout the year, with no more than one vessel present per month. Poland fished exclusively in the Gulf of Alaska and this fishing occurred only during the latter 3 months of 1977 when a maximum of two trawlers were present. Overall, the total number of foreign vessels present per month varied from +21 to -59 percent of the 1976 levels.

Foreign vessels spent 76,761 vessel days in the Alaskan Fishery Conservation Zone in 1977 (Table 12). Japan dominated the effort with 88 percent of the total effort. The Bering Sea-Aleutian Islands area contributed 89 percent of the total foreign effort. Independent stern trawlers, again in 1977, formed most of the fishing power with 35,318 vessel days. Large factory fleets for groundfish and salmon were also prominent contributors with 29,684 vessel days.

Vessel Fees

The Fishery Conservation and Management Act of 1976 required all foreign vessels landing groundfish and crab species to have a permit issued by the U.S. Government and pay certain fees (Tables 15 to 18). These permits specified what species could be landed by a given fishery

plan. In 1977, 642 vessels were issued FCMA permits under five Preliminary Fishery Management Plans (Table 15). Only the Japanese high seas salmon fleet, and patrol and research vessels of all nations, were not required to purchase permits under the Fishery Conservation and Management Act to operate within U.S. waters. Fees for permitted vessels were based on gross tonnage and allocated catch totals. Total foreign vessel tonnage deployed to conduct fishing operations in Alaska was 766,274 gross tons, for which the five foreign nations paid \$586,434. Additionally, fees based on allocated catch amounts were also levied, totaling over \$7.18 million. Total fees paid by the five foreign nations were \$7.77 million, with this amount divided among the nations in the same general proportions as the catch and effort statistics.

Fisheries Research

Foreign research in the Alaska region in 1977 included 20 vessels from two nations studying groundfish, crab, and salmon (Table 19). The Soviet Union utilized 2 vessels and the Japanese 18 vessels to complete the research. Research activities included gillnet, trawl, and pot sets; hydro-acoustical surveys to determine status of fishery stocks; and collection of biological data. Some tagging was also accomplished.

The Soviet Union dispatched two large trawlers to the Bering Sea to conduct pollock studies. The VOLNA and ACADEMIC BERG conducted trawl surveys along the Continental Shelf edge and flats of the central and eastern Bering Sea. Both vessels were in the Fishery Conservation Zone only a short time.

Japanese research studied Tanner and king crab, groundfish and, for the most part, salmon throughout the Bering Sea, Aleutian Islands, and the western Gulf of Alaska. Groundfish studies were conducted by three vessels in the spring and early summer, utilizing hydro-acoustic and trawl survey techniques. One vessel conducted a trawl and pot survey for Tanner and king crab in the central and eastern Bering Sea from May to mid-July. Fourteen vessels studied salmon from June to September. Gillnets and selected longline gear were used to assess stock abundance and collect biological samples. Oceanographic data were collected and selected areas were chosen for tagging studies. Research was conducted from Unimak Pass to Cape Navarin along the Continental Slope during June. After that time, emphasis shifted to the western Aleutian Islands.

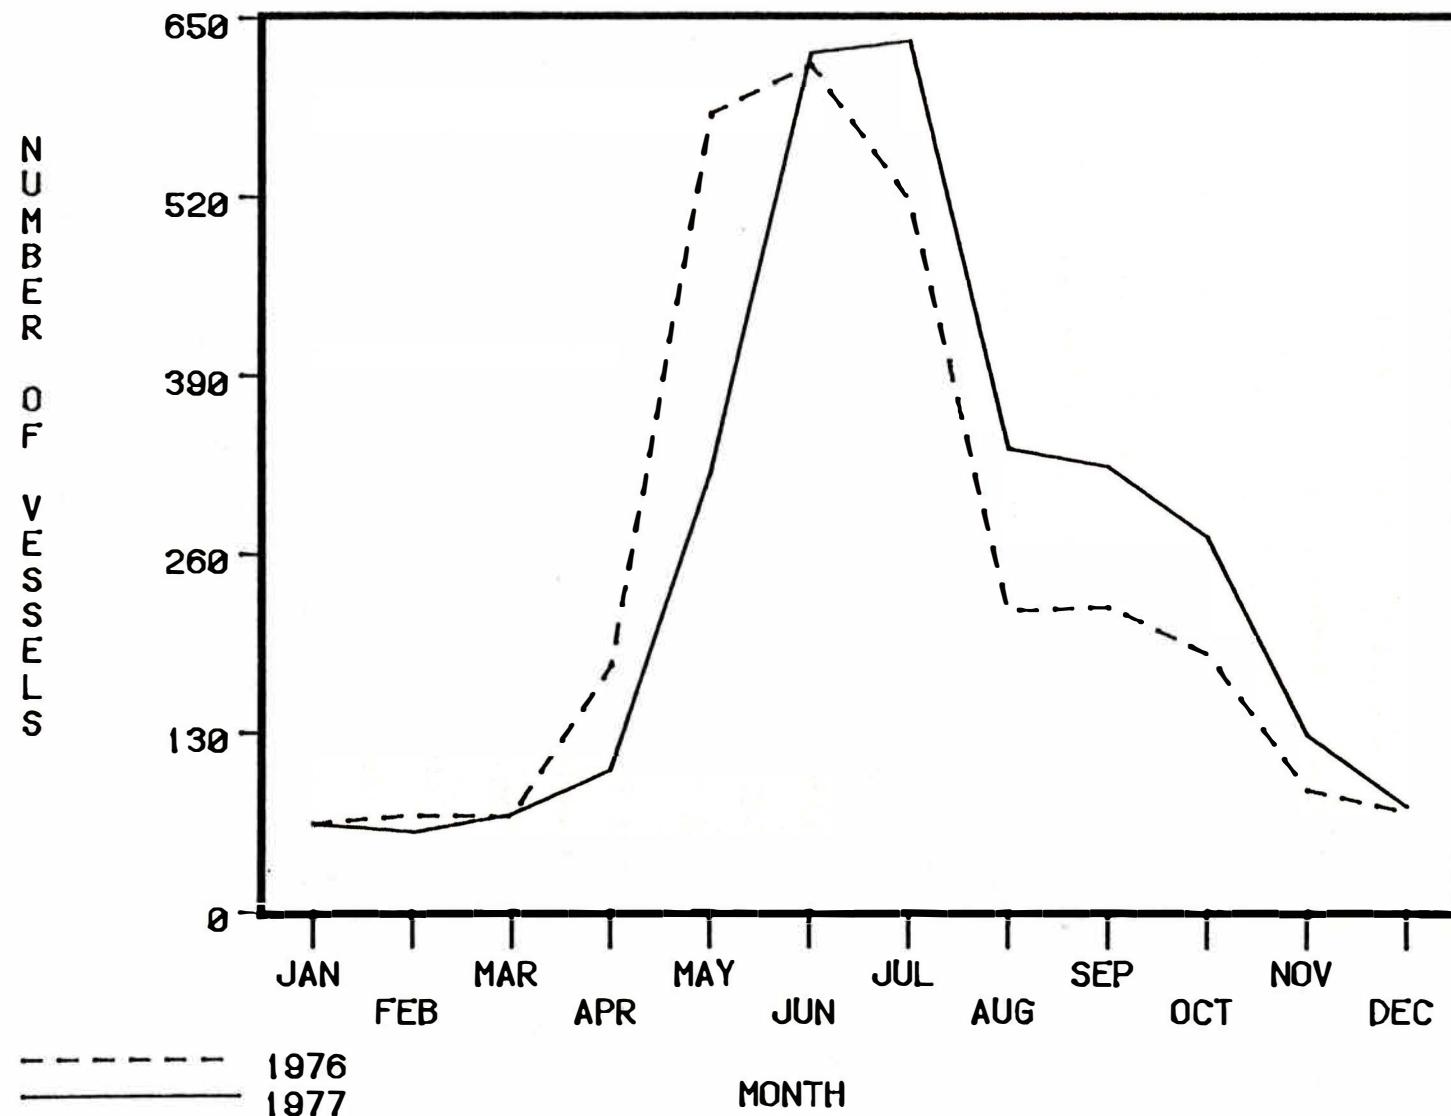

JAPANESE FISHING ACTIVITIES

In 1977, Japanese vessels again dominated the foreign fisheries off Alaska (Figs. 1 to 8 and Tables 10 to 19). The large and versatile fishing fleet deployed by Japan was reduced 10 percent from 1976 levels, but this reduction to the Alaskan fleet was much less than severe cutbacks experienced by Japan in other areas of the Pacific (Table 20). Japanese vessels fished under all five Preliminary Fishery Management Plans, the INPFC agreement for high seas salmon fishing west of 175° W. longitude, and Japanese domestic regulations. The total catch quota established by these regulations was 1.19 million metric tons (2.6 billion lbs.), accounting for 72 percent of all foreign allocations off Alaska in 1977. Japan exceeded their 1977 quota by 4 percent, cornering 82 percent of the total foreign catch off Alaska. This amounted to 43 percent of Japanese distant water fisheries landings and 11 percent of all Japanese fisheries landings in 1977.

During 1977, Japan was involved with negotiating several treaties to assure that historical fishing areas would remain open to Japanese fishermen beyond the establishment of U.S. and Soviet 200 mile fishery zones. The U.S. expansion of authority impacted all Japanese North Pacific fisheries, but despite Japanese fears of a 40 percent cutback from historical fishing levels Japanese allocations were reduced by only 10 percent. At the same time, the Soviet-Japanese agreement signed August 3 totally eliminated Japan from fishing salmon and herring inside Soviet waters and drastically curtailed other major fisheries, such as

Figure 8

NUMBER OF JAPANESE VESSELS OFF ALASKA, 1976-77

for pollock. The net result was a 31 percent reduction to Japan's Pacific fleets and a shift in fleet composition sent to the Alaska region.

Japan deployed 729 vessels to Alaskan waters during 1977. The largest group of vessels fished for salmon west of 175° W. longitude and included six factoryships and 246 gillnet vessels. Eight additional factory fleets worked in the Bering Sea. Two crab factoryships and 12 crab pot vessels fished north of 58° N. latitude for Tanner crab. One yellowfin sole factoryship and five groundfish factoryships utilized a fleet of 59 pair trawlers, 21 Danish seiners, and 9 dependent stern trawlers. Vessels distributed throughout Alaskan waters included 180 medium and 28 large stern trawlers, 22 longliners, and 88 support vessels. Twenty-three independent crab pot and three snail pot vessels completed the fleet. These vessels were distributed between 58 and 634 vessels per month. Monthly comparisons to 1976 levels of fishing activity are shown in Figure 7 and Table 11.

Permits were issued under the FCMA to Japanese vessels fishing within 200 miles of Alaska shores in all but the salmon fishery, which was regulated by INPFC (Table 15). Permits were issued by fishery plan and were distributed 387 to the Bering Sea and Aleutian Island trawl and herring gillnet fishery, 125 for the Gulf of Alaska groundfish fishery, 22 in the sablefish fishery, 43 in the crab fishery, and 17 to the snail pot fishery (only 453 individual vessels were issued these permits). Medium trawlers accounted for 41 percent of the permits issued in all areas. Gross tonnage fees paid by these vessels to secure the fishing

permits totalled over \$196,200, or 33 percent of the gross tonnage fees paid by foreign vessels in the Alaskan region during 1977.

Allocations of fish and shellfish granted to Japan based on traditional effort under the FCMA and the salmon quota established by the Soviet-Japanese agreement allowed a 1,192,400 metric ton catch off Alaska in 1977. Included in this figure were groundfish (94.7 pct.), sablefish (1.6 pct.), herring (0.5 pct.), Tanner crab (1.0 pct.), snails (0.2 pct.), and salmon (2.0 pct.). Ninety-one percent of the allocations were assigned to Bering Sea-Aleutian Island fisheries and 9 percent to Gulf of Alaska fisheries. Catch tonnage fees for this totalled \$6.1 million.

Japanese vessels landed 1,239,915.0 metric tons or 104.0 percent of their 1977 allocation (Table 13). Pollock alone made up 73.3 percent of the total Japanese catch, followed by 10.6 percent flounders, 3.0 percent Pacific cod, 2.5 percent rockfish, and 9.5 percent miscellaneous species.

Pollock comprised 76 percent of the Bering Sea total landings and 42 percent of the fish taken from the Gulf of Alaska, with pollock from the Bering Sea forming 70 percent of all catch taken by Japan. Landings of pollock, Tanner crab, and salmon each fulfilled more than 98 percent of the quota assigned to them. Only catches of snail, squid, and miscellaneous species filled less than 90 percent of the quota assigned to those fisheries.

A total of 67,493 fishing days (185.2 years) were used by Japan to land the 1977 catch (Table 12). The Bering Sea-Aleutian Islands area

accounted for 92 percent of the fishing days. This effort was spread over all fishing grounds off Alaska from the Canadian border to the 1867 U.S.-Soviet Convention Line (Figs. 1 and 2). While trawler and long-liner effort was distributed throughout Alaska, the factory fleets were limited to the Bering Sea and western Aleutian Islands. The yellowfin sole and crab fleets fished the upper edge and flats of the Bering Sea Continental Shelf, while the groundfish factory fleets worked the 100-fathom curve from Unimak Pass northwest to the U.S.-Soviet 1867 Convention Line. The salmon fleets fished both north and south of the western Aleutians. Miscellaneous support, patrol, and research vessels fished throughout Alaska.

Bering Sea-Aleutian Islands Groundfish

Bering Sea groundfish landings were made along the Continental Shelf and throughout the Aleutian Islands. These fishing grounds supported both independent stern trawlers and factoryship fleets totaling 289 vessels, a small reduction from 1976 levels. A total of 40,330 vessel days accumulated the 1,142,987 metric tons of groundfish landed in the Bering Sea-Aleutian Islands region, an increase of 6 percent from 1976 levels. Only landings for rockfish, squid, and miscellaneous species filled less than 95 percent of the Bering Sea-Aleutian Islands groundfish quotas by the close of 1977.

Factory Fleets

Six factory fleets targeted on pollock and yellowfin sole. These fleets were accompanied by 59 pair trawlers, 21 Danish seiners, and 9 dependent stern trawlers. Effort exerted by these vessels totaled 13,008 days. Pair trawl effort was down almost 11 percent from 1976 and Danish seiners effort continued to decline as it has done since 1971. Dependent stern trawler effort remained the same. The pollock factory fleets shifted the bulk of their effort to west and northwest of the Pribilof Islands, as opposed to 1976 when the majority of the effort was centered south of the Pribilof Islands. The yellowfin sole factory fleet conducted operations on the traditional area on the Continental Shelf flats southeast of the Pribilof Islands. Factory fleets were present in the Bering Sea in all but February and March and were present in greatest number from May to October.

Independent Trawlers

Large and medium stern trawlers made up the largest part of the Japanese Alaskan fleet and most of the trawl effort exerted by these vessels was spent in the Bering Sea. Like factoryship fleets, ground-fish trawlers targeted on pollock and a few trawlers targeted on yellowfin sole. Nineteen surimi factory trawlers and 178 medium trawlers fished in the Bering Sea-Aleutian Islands area a total of 26,334 vessel days. The actual catch per unit of effort for all surimi trawlers in the region was up to 15.3 metric tons/hours from 10.9 metric tons/hours in 1976. Medium trawl effort comparisons for the same period were

unavailable. The number of trawlers in the Bering Sea ranged from a low of 21 to a high of 191 per month, with concentrations in excess of 140 trawlers per month operating from May to October.

Gulf of Alaska Groundfish

Gulf of Alaska groundfish landings made by Japan in 1977 were up 11 percent from 1976 levels. Total allocations of 105,000 metric tons of groundfish were 92 percent completed for a catch of 96,928 metric tons. This catch was landed with 2,260 vessel days by 43 independent trawlers. The Gulf of Alaska catch was composed of 42 percent pollock, 21 percent rockfish, 18 percent flounders, and 19 percent miscellaneous species. Over 60 percent of these species were landed in the Kodiak/Yakutat region as opposed to earlier years when most of the catch was taken in the Shumagin/Chirikof area. The monthly number of vessels landing groundfish ranged from 7 to 16, with the largest effort from April to October and December when 11 or more vessels were present per month. The total number of support vessels ranged from zero to five. Overall, Japan landed 9 percent of the total Alaskan catch with 7 percent of the effort from the Gulf of Alaska.

Sablefish Longlining

Japan again deployed 22 longline vessels to Alaskan waters in 1977 (Fig. 2 and Table 8). These vessels fished the central Bering Sea, central and eastern Aleutian Islands, and the Shumagin Islands to south-east Alaskan waters in the Gulf of Alaska. More than 19 vessels fished for sablefish from June to November and at no time were fewer than 11 longliners fishing off Alaska.

Most longliner effort was located in the Gulf of Alaska, with smaller efforts in both the Aleutians and Bering Sea. From 40 to 90 percent of the effort was spent in the Gulf of Alaska each month. Most of this effort was utilized in the Yakutat and southeastern Alaskan areas, with additional effort extended onto Albatross Bank off Kodiak and in the Shumagin Islands. Effort in the Gulf of Alaska by Japanese longline vessels was increased slightly overall from 1976. The Aleutian Islands again in 1977 continued to have active Japanese longliner activity, with this activity increasing throughout the year to a high of 9 vessels in September. Longlining in the south-central Bering Sea continued much as in past years with a maximum of four vessels present in any month, with only a June-July period devoid of longliner activity. Overall, the vessel distribution accounted for a vessel effort of 62, 25, and 13 percent in the Gulf, Aleutian, and Bering Sea areas, respectively. This compares to 68, 4, and 8 percent from the same respective areas in 1976.

Japan was allocated 22,000 metric tons of sablefish in 1977. The directed fishery for sablefish by longliners was allocated 19,500 metric

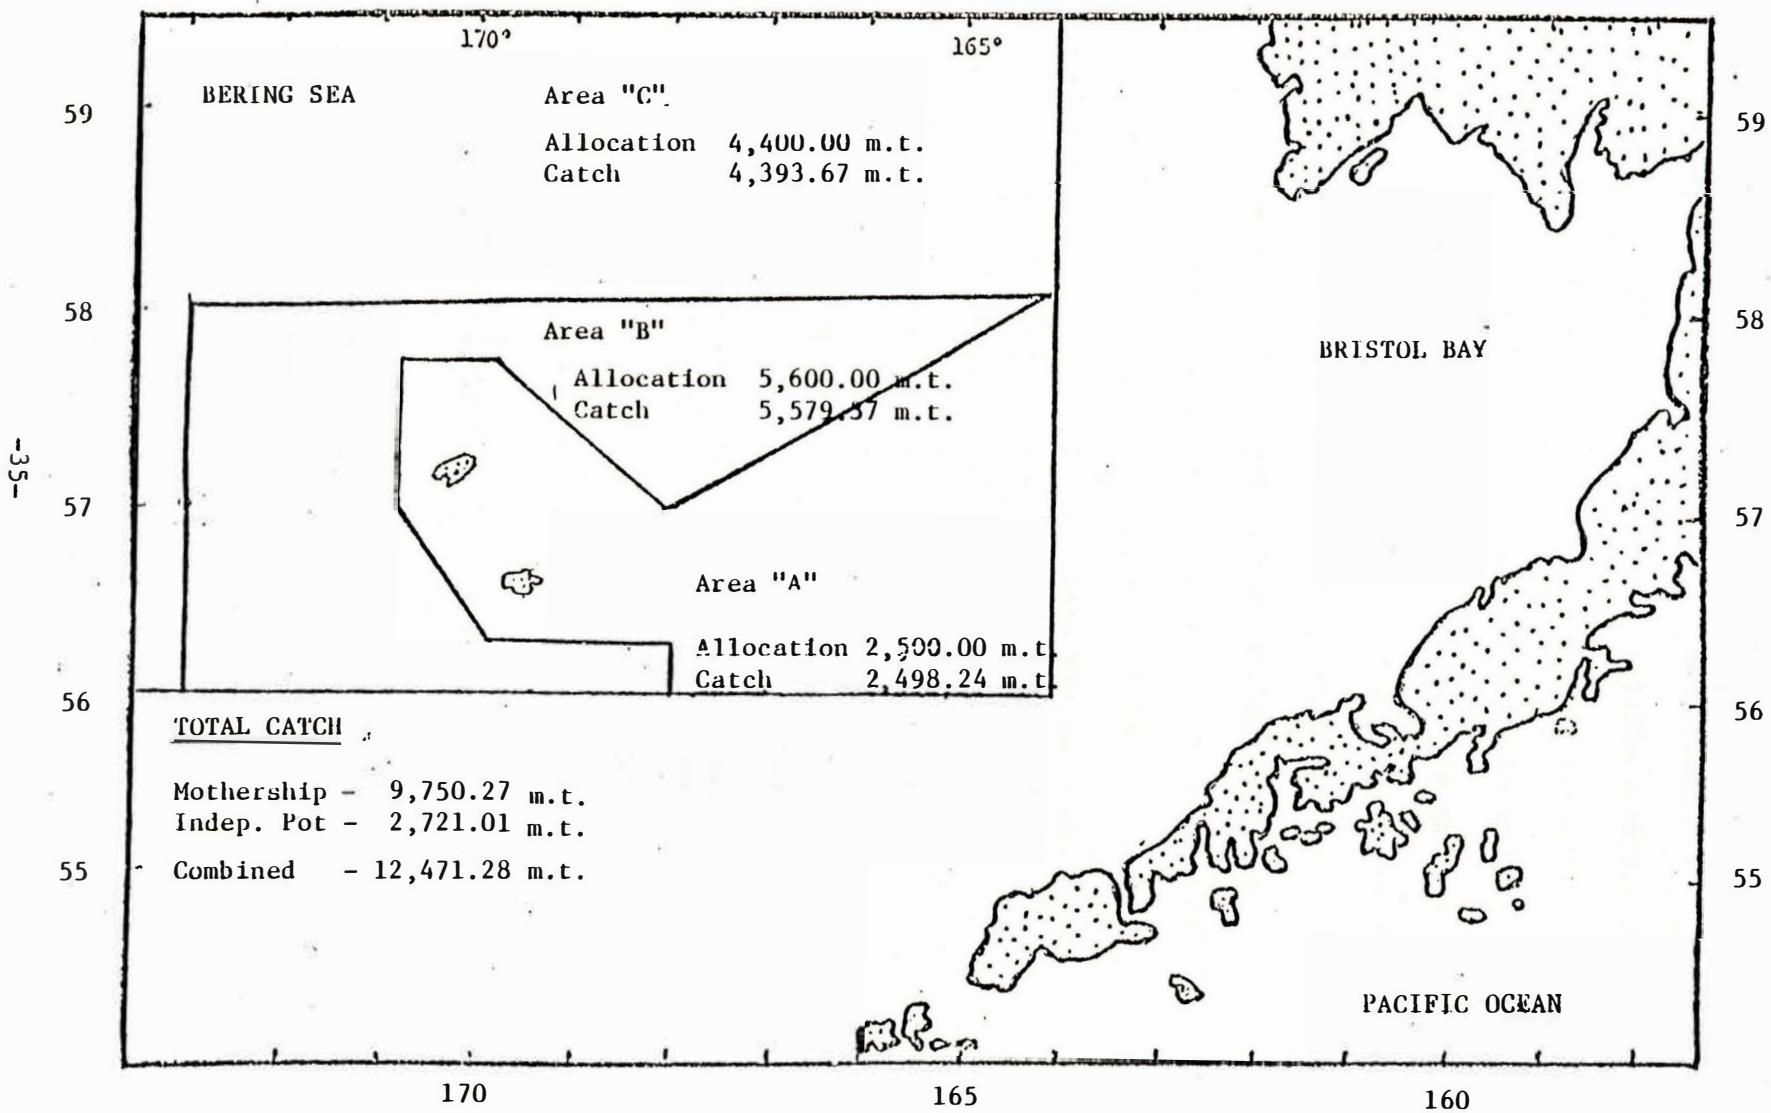

tons and incidental trawl catch the remaining 2,500 metric tons. A provisional maximum of approximately 2 percent, or 3,750 metric tons, was set for sablefish removal from the southeast area. These allocations made up 1-1/2 percent of all allocations made to Japan off Alaska for the year. For this, Japan paid \$13.02 per metric ton of allocation, or 4 percent of the total tonnage fees paid by Japan to fish Alaskan waters.

A total of 18,858 metric tons of sablefish was landed by Japanese vessels in Alaskan waters during 1977 (Table 13). A total of 14,356 metric tons, or 76 percent, was landed in the Gulf of Alaska and the remaining 4,502 metric tons in the Bering Sea-Aleutian Islands region. This was 97 percent of the total allocations, with the Gulf of Alaska taking 103.3 percent of its allocation and the Bering Sea-Aleutian area 80 percent of its allocation. Japanese prices for this product ranged from \$.45 to \$.92 per pound. After poundage fees, this represents an approximate worth of the Japanese sablefish fishery at about \$27.8 million before expenses, or about \$1,500 per metric ton.

Tanner Crab

The Japanese crab fleet was composed similar to 1976 (Figs. 2 and 9 and Tables 10, 12, and 13). Two motherships and 12 crab pot vessels again fished solely for Tanner crab in the central Bering Sea. An additional 12 independent crab pot vessels fished in waters west of 175° W. longitude in the central Bering Sea. These vessels were allocated 12,500 metric tons of crab under the Tanner Crab Preliminary

FIGURE 9 - JAPANESE TANNER CRAB FISHING AREAS AND RESTRICTIONS - 1977

Fishery Management Plan and, during their operation in 1977, landed 15.6 million crab for a total catch of 12,471 metric tons (27.5 million lbs.). Independent crab pot vessels accounted for 24 percent of the total crab landed. The total catch in 1977 was 34 percent greater than in 1976 but reported catches in 1976 did not include landings made by independent crab pot vessels. A comparison of mothership landings between 1976 and 1977 shows a 24 percent increase in 1977. The total crab landings broken down by three management areas were:

<u>Area</u>	<u># Crab (X millions)</u>	<u>Avg. Wt. (kg)</u>	<u>Catch (MT)</u>	<u>Allocation (MT)</u>	<u>% Allo- cation Landed</u>	<u>Effort (MT/1000 pots lifted)</u>
A*	2.452	1.02	2,498.24	2,500.0	99.9	12.8
B*	7.166	.78	5,579.37	5,600.0	99.6	18.5
C Mother- ship	2.313	.72	1,672.66	1,673.0	99.9	18.4
Indep. Pot	3.675	.74	2,721.01	2,727.0	99.8	--
TOTAL						
Mother- ship	11.931	.82	9,750.27	9,773.0	99.7	16.6
Indep. Pot	3.675	.74	2,721.01	2,727.0	99.8	--
TOTAL ALL	15.606	.80	12,471.28	12,500.0	99.8	--

*Area A and Area B were fished only by mothership fleets.

Japanese crab vessels fished Alaskan waters from March to October. Like 1976, the mothership fleets returned to the Bering Sea in March. Unlike 1976, the larger quotas carried the season past last year's ending date in June to an ending on July 10, 1977. Both fleets began fishing on the Continental Shelf north of Unimak Pass during the second week of March. Both fleets shifted to west of the Pribilof Islands by mid-April. The fleets separated in mid-May when one fleet returned to north of Unimak Pass in Area A to complete its quota. In early June, 11 independent crab pot vessels began fishing in Area C of the central Bering Sea and the motherships continued fishing as in May. By mid-July, the mothership fleets departed the Bering Sea having caught their quota. The independent crab pot fleet reduced to five vessels by early August. By late August, only one vessel remained and it departed in mid-October.

The incidental catch of king and Tanner crab by Japanese fishing vessels was decreased again in 1977. There was a 35 percent reduction to the total incidental catch of crab in 1977, down to 17 million crab. King crab accounted for 599,623 of that total and Tanner crab the remainder. The annual incidental take of all crab in the years 1975 to 1977 was approximately 60 million, 26 million, and 17 million crab, respectively.

Salmon

Japan conducted the 1977 high seas salmon fishery west of 175° W. longitude in the waters north and south of the western Aleutian Islands (Figs. 2 and 10). The size and scope of the fishery was determined by two dominating forces. These were the INPFC and Japan-Soviet agreements for high seas salmon that excluded the Japanese salmon fleet, for the first time, from fishing within the Soviet 200 mile fishery zone, while imposing specific time, area, and catch limitations (Fig. 10).

The Japanese high seas salmon fleet was reduced from 1976 levels (Tables 11 and 12). The 1977 fleet was composed of 6 factory processing ships and 246 gillnet catcher vessels. This was a 26 percent reduction from the 342-vessel fleet in 1976, which had 10 factoryships and 332 gillnet catcher vessels.

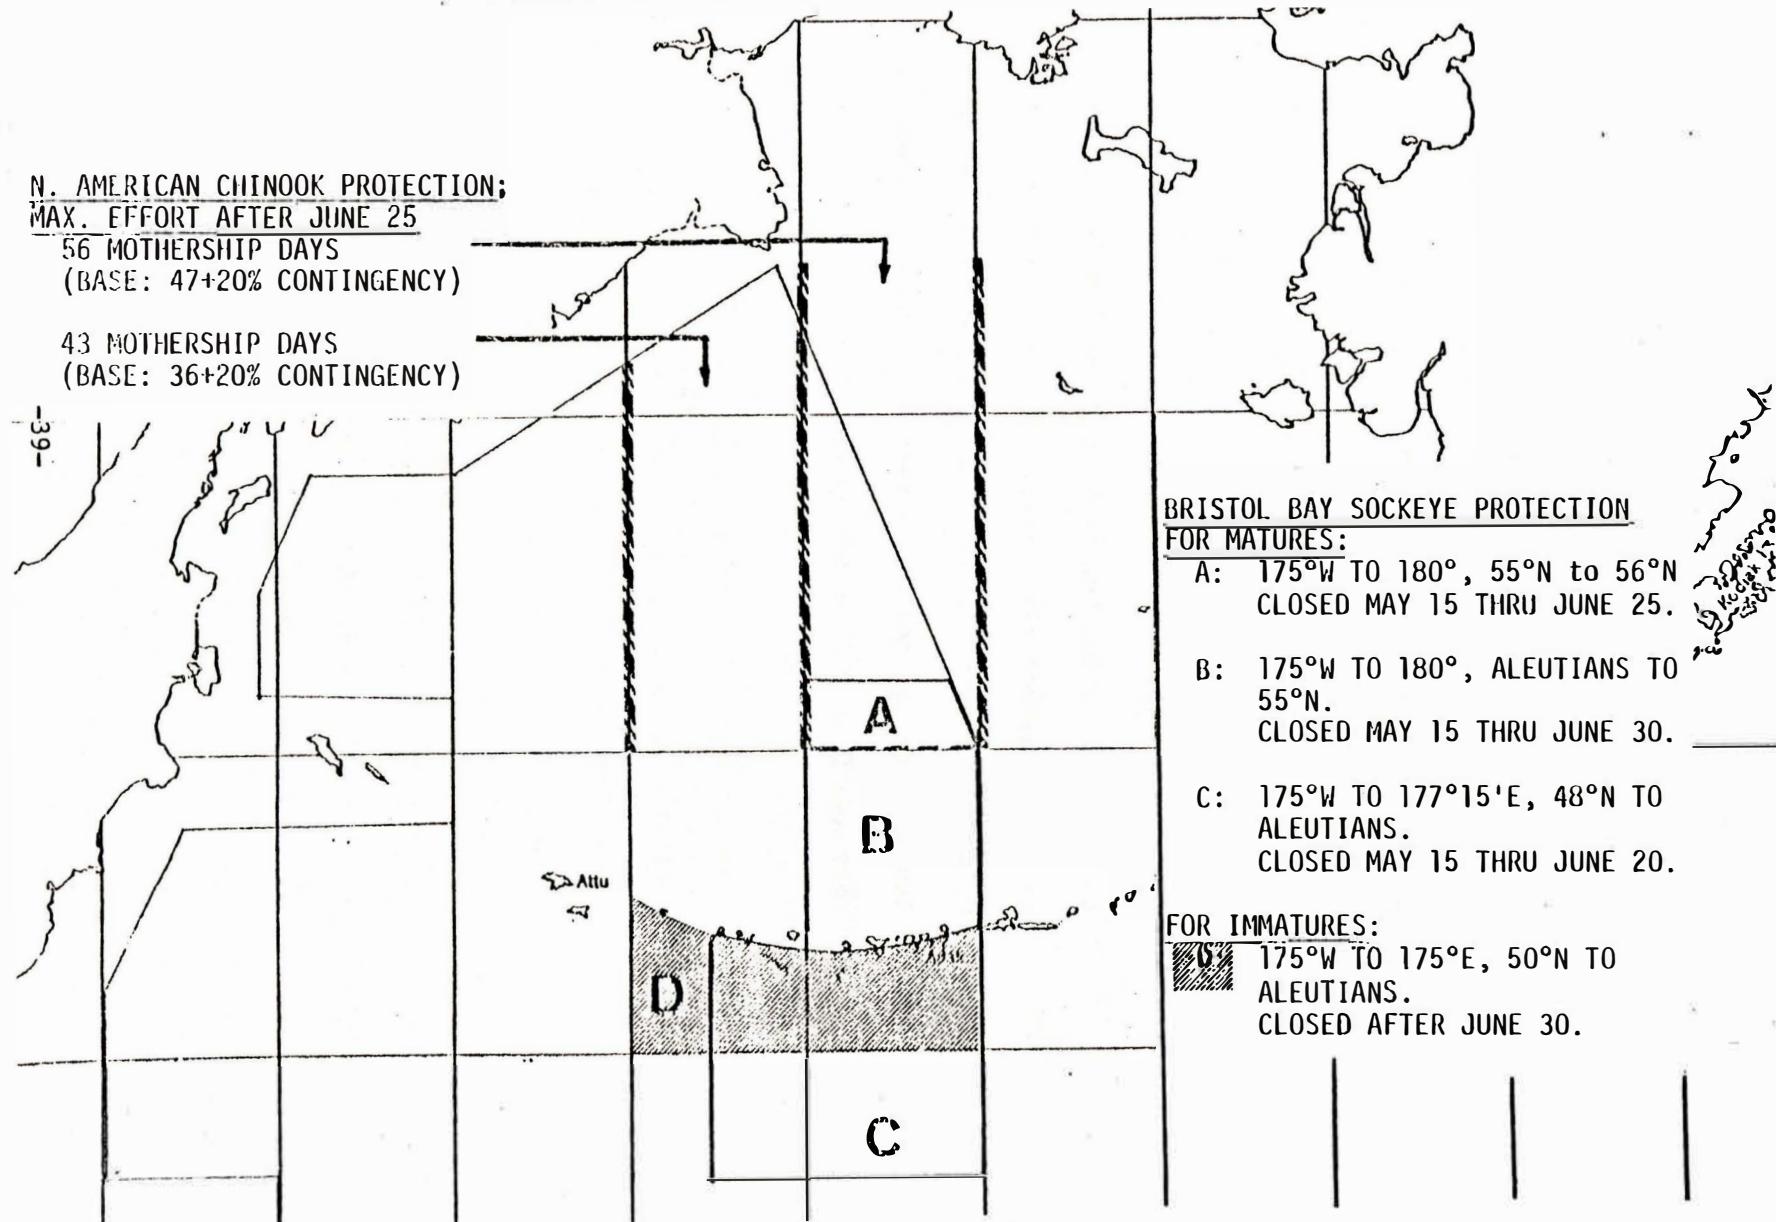

Alaskan waters produced a smaller salmon catch by the Japanese fleets in 1977 (Tables 13 and 14). Reduced by 26 percent, the 23,957 metric tons of salmon harvested were 9,527 metric tons less than the 1976 catch of 32,484 metric tons. The 1977 landings included interception of an estimated 1,007,000 sockeye salmon destined for Bristol Bay. This was divided 779,000 mature and 228,000 immature salmon.

The 1977 salmon season extended over a 2-month period compared to 3 months in 1976. During that time, the six fleets expended 14,616 vessel days, over 19 percent of the total foreign effort off Alaska by all nations in 1977.

160° 170° 180° 170° 160°

Figure 10 - JAPANESE SALMON MOTHERSHIP FISHING RESTRICTIONS - 1977

RESTRICTIONS ON OPERATIONS OF THE JAPANESE MOTHERSHIP SALMON
FISHERY IN RELATION TO SALMON OF NORTH AMERICAN ORIGIN IN 1977

The fleets began fishing in June operating south of the western Aleutians until late June when one fleet moved to the Bering Sea. Five fleets fished the central Bering Sea during July while one fleet remained south of the western Aleutians. The six fleets completed operations at the end of July and then returned to Japan.

Snail

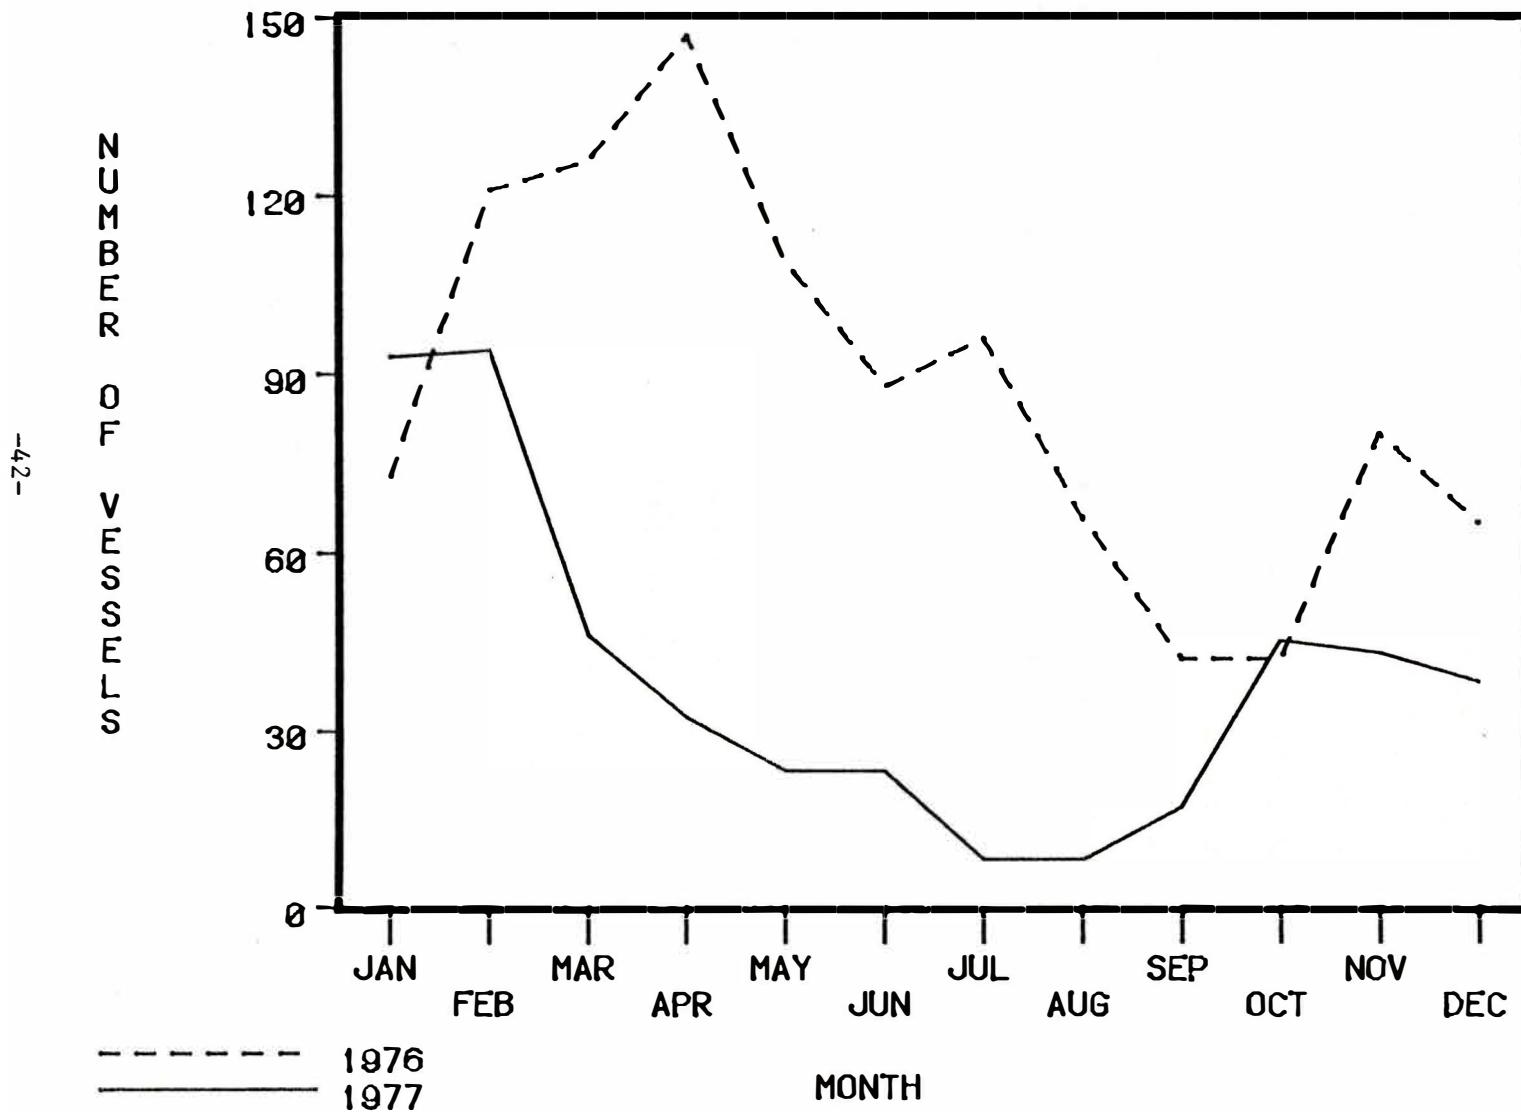

Japan employed three snail pot vessels in 1977 which operated in the central Bering Sea from June until mid-October (Fig. 2 and Tables 10 to 14). The vessels harvested 404 metric tons of edible meat from a 2,700-metric-ton quota. This catch was a 73 percent reduction from 1976 levels although the 2,700-metric-ton quota allowed for an 80 percent increase from 1976 catch levels.

SOVIET FISHING ACTIVITIES

In 1977, the Soviet Union again deployed the second largest foreign fleet to Alaskan waters. A total of 297 Soviet vessels operated off Alaska in 1977, exerting 7,374 vessel days (20.2 years) (Figs. 1, 2, and 11 and Tables 10 to 19). These vessels operated throughout Alaska landing predominantly pollock, with secondary species of herring in the Bering Sea and Atka mackerel in the Gulf of Alaska. Forty-nine percent of the total 372,600-metric-ton quota was landed, comprising a 12 percent share of the foreign landings off Alaska for the year. This catch was taken by an effort divided 70 percent to the Bering Sea-Aleutian Island area and 30 percent to the Gulf of Alaska. Overall, this effort was reduced 50 percent from 1976 levels.

Soviet fishing operations were conducted under two preliminary management plans. Under the Bering Sea-Aleutian Island trawl and herring gillnet plan, the Soviets were allocated 264,400 metric tons of which 118,735 metric tons was landed. The Gulf of Alaska groundfish plan authorized a quota of 108,200 metric tons of which 63,083 metric tons was landed. The primary allocation under both plans was pollock at 175,800 metric tons, which the Soviets were 59 percent successful in fulfilling. In the Bering Sea-Aleutian Island plan, the miscellaneous species and herring categories were a dominant part of both the allocation and catch while in the Gulf of Alaska, Atka mackerel was secondary in total catch and allocation. The Soviet's overall performance in taking only 49 percent of all quotas assigned resulted from FCMA standards

Figure 11
NUMBER OF SOVIET VESSELS OFF ALASKA, 1976-77

which require that fulfilling the quota of any one fish allocation closes the entire fishery under the individual Fishery Management Plan.

Permit fees paid by the Soviet Union which allowed fishing within Alaska's Fishery Conservation Zone totaled in excess of \$1.03 million (Tables 16 to 18). Fees were paid for both vessel gross tonnage and total allocation tonnage by species assigned. The Soviet Union deployed a fleet tonnage of approximately 402,000 tons, or 52 percent of the total foreign vessel tonnage off Alaska in 1977. For this, a vessel tonnage fee of approximately \$296,000 was paid. The 372,600-metric-ton-catch quota fee totaled \$737,689, or \$1.08 per ton landed.

Bering Sea-Aleutian Islands

The Bering Sea-Aleutian Island region was again the most productive for the Soviets, but the total catch from the area was reduced 60 percent from 1976. The area provided 65 percent of the total Soviet Alaskan catch with the same percentage of total Soviet effort. The total allocation of 264,400 metric tons was 45 percent completed by the end of the year.

The Soviet Union conducted a continuous fishing presence in the Bering Sea-Aleutian Island area in all months but August. Vessel numbers ranged from zero to two from July to December and from 19 to 48 in the first half of the year. The most concentrated effort was in January and February when up to 39 trawlers were joined by 4 factoryships targeting on pollock in the central Bering Sea, but landing a large incidental

herring catch. By March 1, the onset of the FCMA, the factory fleets had departed and the effort divided between the areas fished in the first 2 months and the Aleutian Island chain. All areas continued to decrease in effort until August when no vessels fished in either the Bering Sea or Aleutian Islands. In late September, the pollock fishery was resumed in the central Bering Sea and, by October, 18 trawlers were again targeting on pollock and herring. This trawler effort remained constant through yearend.

Gulf of Alaska

Soviet vessels fished in the Gulf of Alaska in all months except April to June, landing approximately 63,083 metric tons of the 108,200-metric-ton quota assigned. Thirty-five percent of the Soviet Alaskan catch was from the Gulf of Alaska and consisted of 63 percent pollock and 31 percent Atka mackerel. The total catch in the area was increased by 2 percent over 1976 levels. Ninety-eight vessels were permitted for the Gulf of Alaska groundfish fishery. The trawl effort in the first 3 months varied from 10 to 12 trawlers taking the two primary species off Portlock and Albatross Banks near Kodiak Island and southeast of the Shumagin Islands. No Soviet effort was conducted in the Gulf of Alaska from late April to July when effort was resumed east of Kodiak. This effort expanded through the end of the year, encompassing a Soviet effort that ranged from 10 to 20 vessels monthly from Unimak Pass east to 148° W. longitude. The majority of this effort was spent in the

Shumagin Island to Albatross Bank area. Included in the total effort was one factoryship which fished briefly during mid-November in the Shumagin Island area. By the end of November, this factoryship and accompanying trawlers departed the Alaska Fishery Conservation Zone.

SOUTH KOREAN FISHING ACTIVITIES

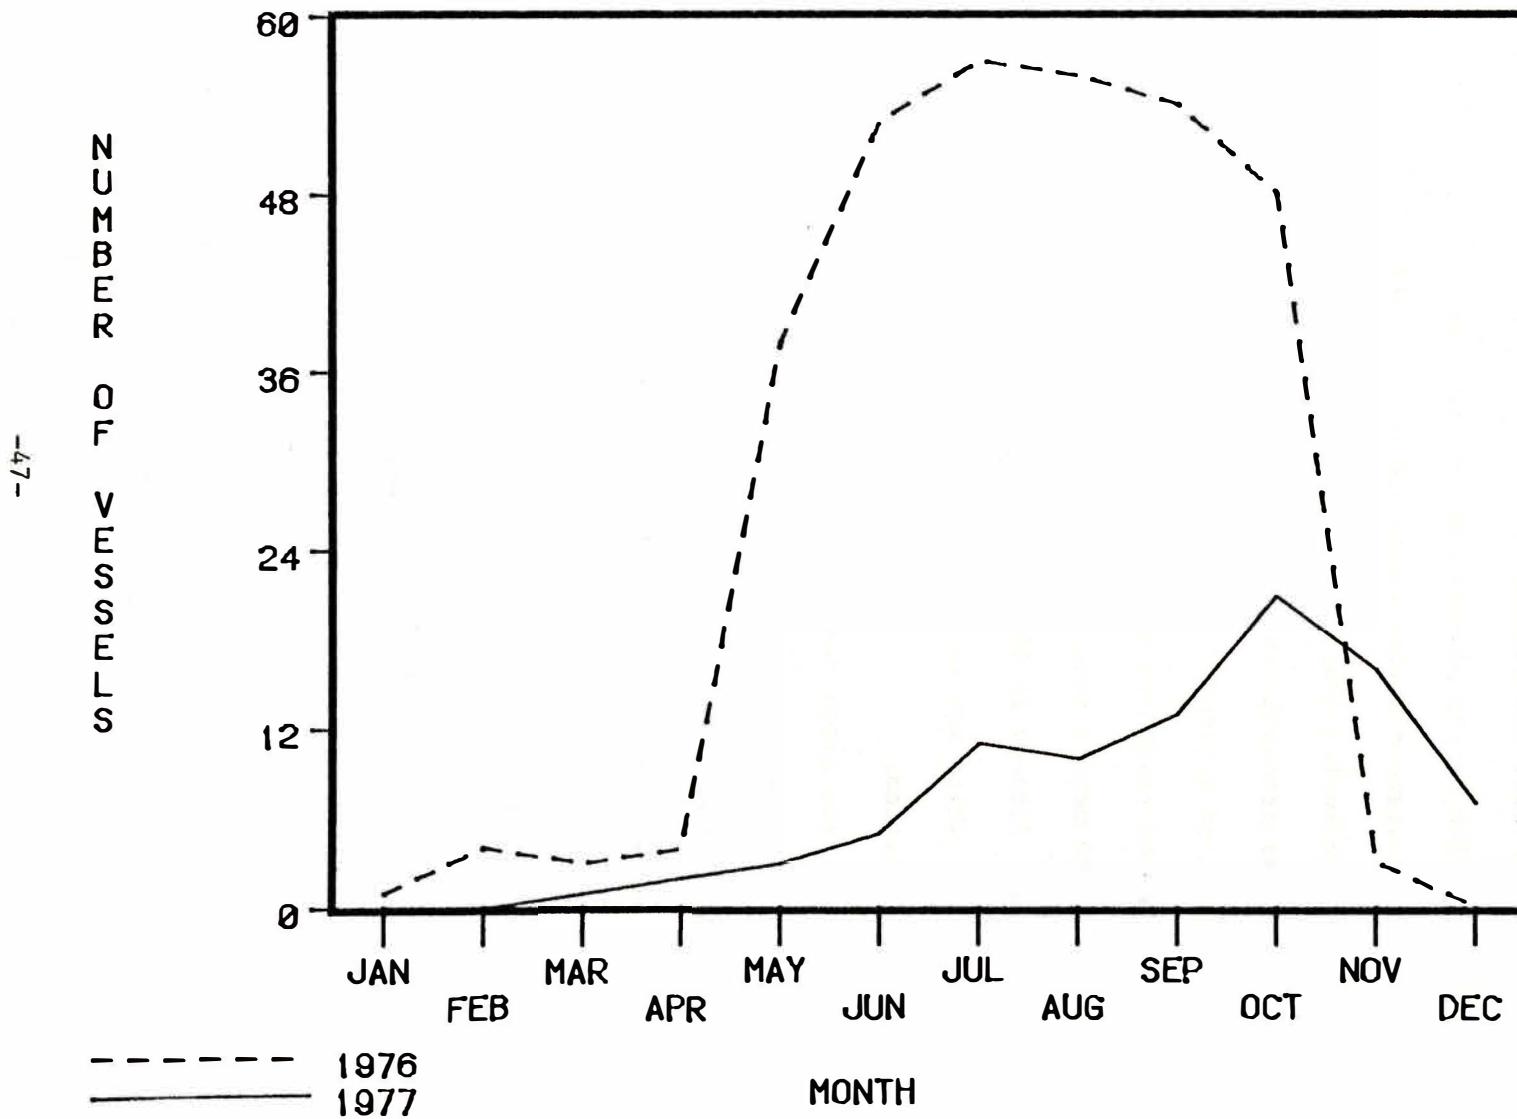

During 1977, South Korean fishing operations off Alaska decreased significantly as compared to 1976 (Figs. 1, 2, and 12 and Tables 10 to 18). A groundfish trawl fishery was conducted by independent stern trawlers in the Gulf of Alaska and in the Bering Sea and a longline fishery was conducted in the Gulf of Alaska. These vessels fished under preliminary management plans for the Bering Sea and Aleutian Island trawl and herring-gillnet fishery, the Gulf of Alaska groundfish fishery, and the sablefish fishery. The total 85,751 metric ton catch was 105.6 percent of the total 81,190 metric ton allocation (landings of pollock and rockfish were exceeded causing the excess catch). Twenty-nine different South Korean vessels operated off Alaska in 1977, with a maximum of 21 vessels during any one month. These vessels used 1,702 vessel days (4.7 years). Catch fees of \$385,584 were paid to land a catch valued at \$9.3 million.

Groundfish

South Korea conducted its 1977 groundfish fishery with independent stern trawlers in the Gulf of Alaska and eastern Bering Sea. The factory-ship fleet employed in the 1976 season was not utilized in 1977. The overall groundfish catch was 85,751 metric tons, divided 56 percent and 44 percent, respectively, between the Bering Sea-Aleutian Islands area and the Gulf of Alaska. This total catch was down 30,471 metric tons,

Figure 12

NUMBER OF SOUTH KOREAN VESSELS OFF ALASKA, 1976-77

or 26 percent, from 1976; and the catch distribution was radically equalized between the two areas, which in 1976 were weighted 84 and 16 percent, respectively.

The Bering Sea-Aleutian Island region had the most activity. Ten large stern trawlers supported by two refrigerated transports operated in the Bering Sea and Aleutian Island trawl fishery in 1977. The vessels fished primarily in the eastern Bering Sea between Unimak Pass and the Pribilof Islands. The vessels commenced operations in June and continued for the remainder of 1977. South Korea was given an allocation of 43,090 metric tons of groundfish in the Bering Sea and Aleutian Island trawl fishery in 1977. South Korean vessels harvested 47,693 metric tons, which was almost exclusively pollock and 110 percent of the area allocation.

Nine large stern trawlers operated in the Gulf of Alaska trawl fishery in 1977. The vessels began operations in September and remained until the end of 1977. The principal fishing ground was south of the Shumagin Islands westward to the eastern Aleutian Islands. Korea was given an allocation of 38,100 metric tons of groundfish in the Gulf of Alaska and harvested 38,058 metric tons, almost exclusively pollock.

Sablefish Longlining

South Korea also mounted a limited fishery for sablefish by independent longline vessels during 1977. Six longline vessels operated during the year with the principal fishing area on and along the Continental

Shelf edge in the central and western Gulf of Alaska. One vessel began fishing in March and the number of vessels increased steadily to a peak of six in July and then decreased gradually to two vessels in December. South Korea was given an allocation of 2,200 metric tons of sablefish in 1977 and reported a harvest of 1,689 metric tons. This was a decrease of 845 metric tons, or 33 percent, from 1976 levels when the fishery had up to 23 longliners concentrated primarily in the eastern Gulf of Alaska.

TAIWANESE FISHING ACTIVITIES

Taiwan dispatched both trawl and longline vessels to Alaskan waters for the third straight year, with effort divided between the Gulf of Alaska and Bering Sea (Figs. 1, 2, and 13 and Tables 10 to 18). Four stern trawlers and one longliner made up the Taiwanese fleet, representing an increase of one stern trawler and reduction of two longliners from 1976 levels. These vessels combined to land 1,101 metric tons of the 5,510 metric ton quota in 146 vessel days (0.4 years). Taiwan paid catch fees of \$9,036 to land a catch valued at approximately \$120,000.

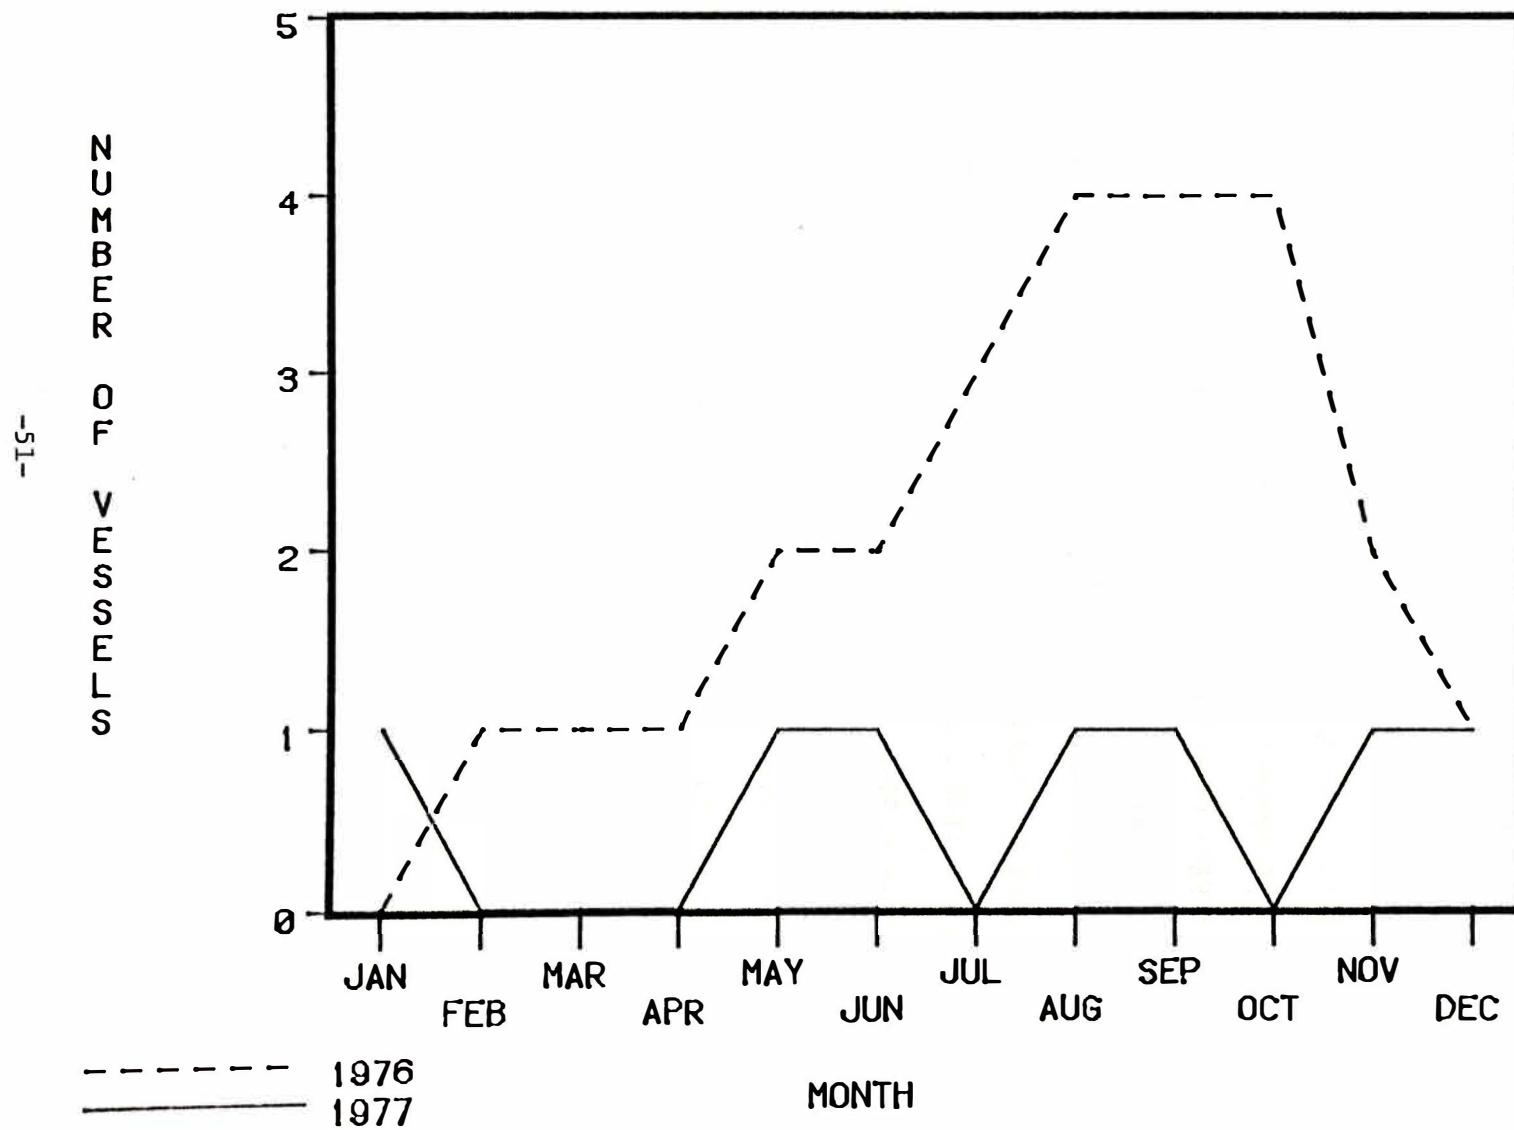

In mid-May, one stern trawler initiated Taiwan's 1977 pollock fishery by commencing fishing in the central Bering Sea. By June, this vessel fished the north-central Bering Sea prior to departure in July. One stern trawlers returned to fish north of Unimak Pass in August and this one was replaced by another stern trawler which fished until late September. Again in November, one trawler arrived for a limited time prior to departing Alaskan waters north of Unimak Pass.

The single longliner was present during January in southeast Alaskan waters. Prior to the onset of FCMA on March 1, this longliner departed Alaska.

A total of 5,510 metric tons of pollock, sablefish, and miscellaneous species was allocated to Taiwan. All of these allocations were for the Bering Sea-Aleutian Island area and were divided: pollock, 5,000 metric tons; sablefish, 200 metric tons; and miscellaneous species, 310 metric tons. For these, Taiwan paid fees amounting to an average of

Figure 13

NUMBER OF TAIWANESE VESSELS OFF ALASKA, 1976-77

\$3.87 per metric ton. (An additional \$4,772 for gross tonnage fees was also assessed.) Total Taiwanese allocations amounted to 0.4 percent of total allocations to all foreign vessels off Alaska in 1977.

The actual catch landed was far below allocated amounts. The total 1977 catch by Taiwan, including a brief longline fishery in the southeast prior to March 1 and a minimal stern trawler effort in the Bering Sea before the onset of FCMA, was 1,101 metric tons. This was 20 percent of the allocation assigned to Taiwan.

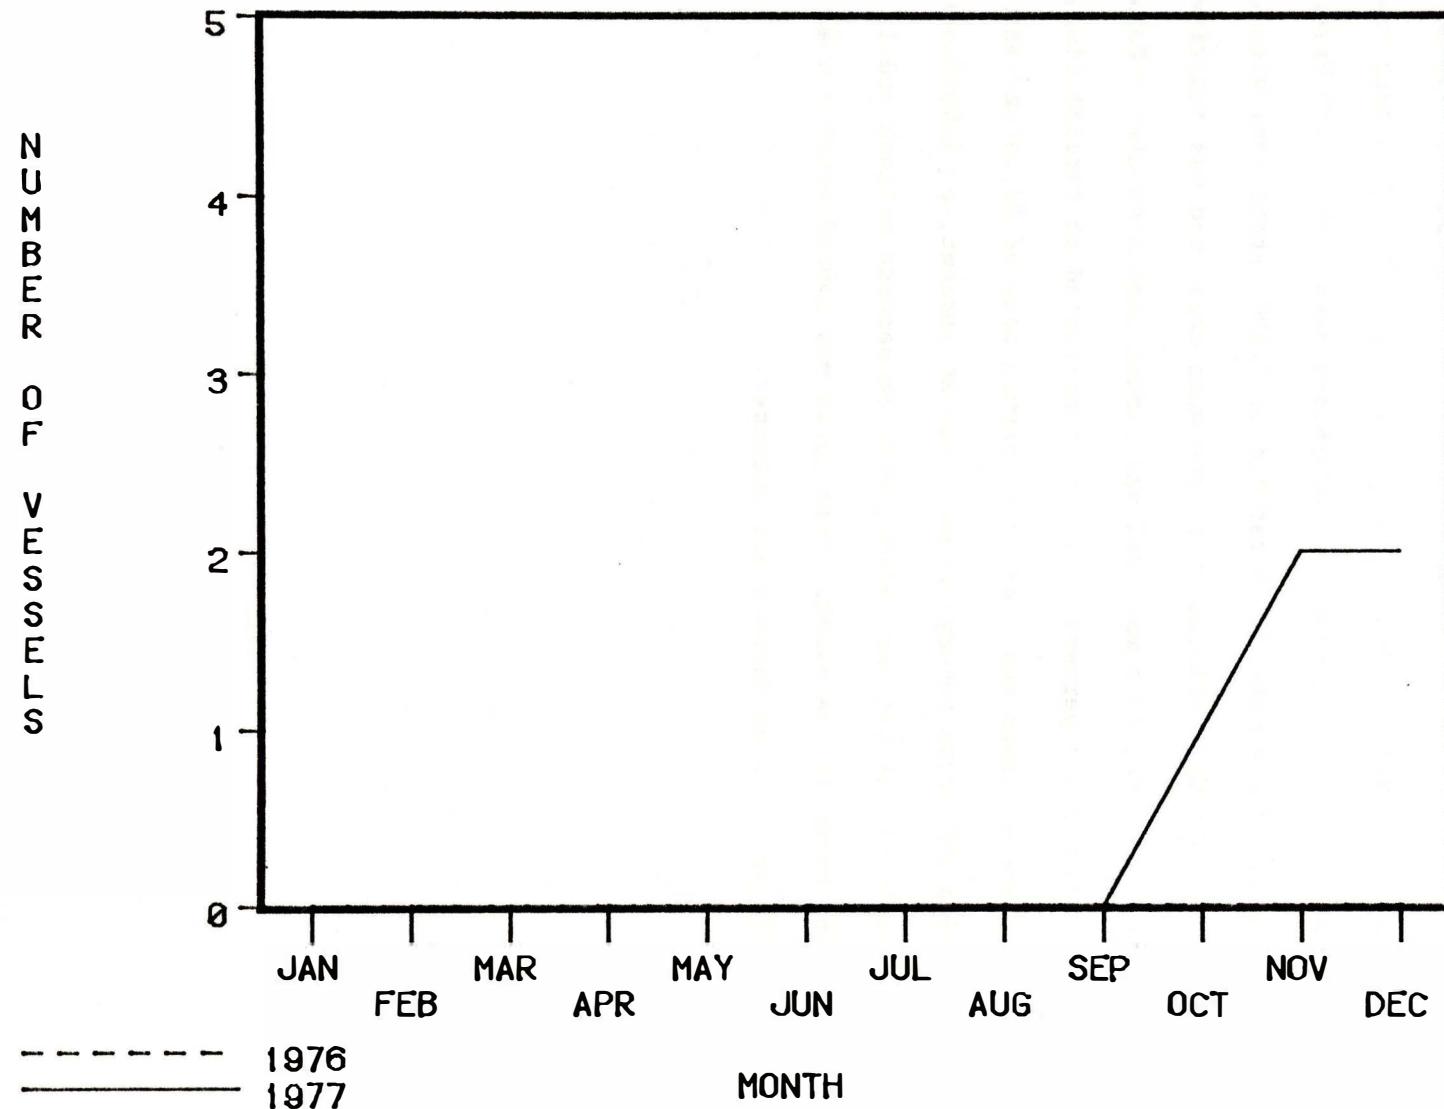

Taiwan had the dubious honor of having the large Taiwanese stern trawler HIGHLY No. 301 become the first vessel off the Pacific Coast of the United States ever seized for violation of the FCMA. The Coast Guard Cutter CONFIDENCE came alongside and boarded the HIGHLY No. 301 in the southeastern Bering Sea, finding large amounts of non-allocated species frozen as product for shipment out of Alaskan waters. A settlement of \$335,000 was reached in civil suit against the vessel. After payment of the fine in late September, the HIGHLY No. 301 departed for Taiwan.

POLISH FISHING ACTIVITIES

Poland began fishing Alaskan waters again after an absence of one season (Figs. 1 and 14 and Tables 10 to 18). Two stern trawlers were dispatched north from the terminated hake fishery off Washington-Oregon-California shores. Allocations of 7,200 metric tons were 26 percent of Poland's U.S. allocation on the west coast and was comprised of pollock, Pacific cod, Atka mackerel and miscellaneous species. Poland's allocation was 0.5 percent of all fish allocated to foreign fishermen in Alaskan waters and these cost permit fees of \$3.63 per metric ton, plus \$28,108 gross tonnage fees. Only 20 percent, or 1,456 metric tons, of this allocation was landed, with 86 percent pollock and 14 percent Atka mackerel in the catch. This catch was landed south and east of Kodiak Island between October and December.

Appendix 1

GENERAL CHART OF AREAS REFERRED TO IN TEXT

APPENDIX 2A

General Terms and Abbreviations Used in Text

- Aleutian Islands - Area west of 170° W. longitude extending westward to the U.S./Soviet Convention Line and north to 54° 30' N.
- Bering Sea - All waters north of the Alaska Peninsula west to 170° W. longitude, and all waters north of the Aleutian Islands north of latitude 54° 30' N. The U.S. western boundary of the Bering Sea is the U.S./Soviet Convention Line of 1867 extending from the North Pacific Ocean to the Bering Straits.
- Domestic Fisheries - U.S. fisheries off Alaska fishing for halibut, salmon, crab, shrimp, and groundfish.
- FCMA - Fisheries Conservation and Management Act of 1976, 16 U.S.C. 1801-1882, 90 Stat. 331 (1976).
- FCZ - Fishery Conservation Zone established by the Fisheries Conservation and Management Act of 1976 extending from 3 to 200 miles off the shores of Alaska.
- Fishing Gear - Any device used to land fish species including but not limited to trawl, longline, pot, troll, and net gear.
- Fishery Management Plan - Final management package formulated by the North Pacific Management Council covering an entire fishery management scheme.
- Fisheries Violations - Any violation of fishery laws, acts, conventions, or treaties.
- Foreign Fisheries - Fisheries conducted by foreign vessels off Alaska which include:

Japan	(JA)
U.S.S.R.	(UR)
South Korea	(KS)
Taiwan	(TW)
Poland	(PL)

APPENDIX 2A (con.)

Gulf of Alaska

- All North Pacific waters north of Dixon Entrance westward to 170° W. longitude.

INPFC

- International North Pacific Fishery Convention.

IPHC

- International Pacific Halibut Convention.

Metric Ton

- 2,204.6 U.S. pounds.

NMFS

- National Marine Fisheries Service, National Oceanic and Atmospheric Administration, Department of Commerce.

Observer Program

- NMFS program to place U.S. scientists and technicians aboard foreign fishing vessels to collect biological information on the catch landed.

Permit

- Agreement by the United States to allow a vessel to operate under specific guidelines within the FCZ.

Preliminary Management Plan

- Management plan developed by National Marine Fisheries Service that is used until a Fishery Management Plan is developed by the North Pacific Fishery Management Council.

USCG

- United States Coast Guard, Department of Transportation.

U.S./Soviet Convention Line

- Common boundary demarcation line between the U.S. and Soviet Union in the Bering Sea.

Vessel Day

- Effort by a single vessel conducting fishing operations for 1 day.

APPENDIX 2B

Definition of Terms, Abbreviations, and Symbols Used to Identify Fishery Violations in this Report

- FC - Fishery Citation - Enforcement action taken to indicate a minor infraction of the FCMA. No monetary penalty assessed.
- FV - Fishery Violation - Serious violation of the FCMA. Monetary penalty assessed.
- FS - Fishery Seizure - Serious and flagrant violation of the FCMA resulting in seizure and detainment of the violating vessel, plus possible monetary and permit sanction penalties.
- FO - Fishery Other - Non-FCMA violations.

FCMA Fishery Regulations By Numeric Order

- 611.3 Conducting fishing activities without a valid permit.
- 611.4 Failure to properly report the time fishing operations began or ceased.
- 611.5 Failure to properly mark fishing vessel or fishing gear.
- 611.6 Failure to facilitate an inspection in a timely and safe manner.
- 611.7 Prohibitions against the FCMA, including interference with enforcement activities, fishing illegally inside 3 miles or within closed areas, or possession of fish taken illegally.
- 611.8 Interference with a U.S. observer placed aboard a foreign vessel.
- 611.9 Failure to maintain catch records in correct order or failure to report catch in proper manner.
- 611.11 Gear conflicts involving loss to another vessel.
- 611.13 Retention or slow returning of prohibited species.
- 611.93 Failure to properly record catch landed or violation of closed areas identified in the Bering Sea or Aleutian Islands area.

APPENDICES 3 TO 7
FOREIGN VESSELS FISHING OFF ALASKA
1977

LISTINGS IN EACH SECTION ARE ARRANGED
IN THE FOLLOWING ORDER:

- FACTORY SHIPS
- FACTORY TRAWL/CATCHER VESSELS
- LARGE, MEDIUM, AND SMALL TRAWLERS
- LONGLINERS
- SHELLFISH VESSELS (JAPAN ONLY)
- SUPPORT VESSELS
- FACTORY FLEETS (JAPAN ONLY)
- RESEARCH VESSELS

LETTER CODES FOR THIS SECTION ARE:

- B BERING SEA AND ALEUTIAN ISLAND TRAWL AND HERRING GILLNET FISHERY
- G GULF OF ALASKA GROUNDFISH FISHERY
- S SABLEFISH FISHERY
- C CRAB FISHERY
- N SNAIL FISHERY

FOREIGN PATROL AND RESEARCH VESSELS, AND JAPANESE HIGH SEAS SALMON VESSELS ARE NOT ISSUED FCMA PERMITS, BUT ARE RECORDED FOR REFERENCE IN THESE LISTINGS.
