The Creation of a Computerized Benthic
Invertebrate Life History File

Janice V. Caracciolo and Suellen Craig

Sandy Hook Laboratory
Division of Environmental Assessment
Highlands, New Jersey 07732

Report No. SHL-82-16
(June 1982)

Introduction

Knowledge of the life histories of benthic invertebrate species has been and is becoming increasingly important to scientists and environmental managers. This information can be used at the individual species level or at the community level.

At the species level, knowledge of habitat or environmental, and food requirements is always necessary to establish and maintain a laboratory culture for behavioral studies, toxicity bioassays or other similar uses. Reproductive and life span information can be invaluable in choosing a suitable experimental organism for these types of studies. The life habits data for a species can also provide an indication of which species are most likely to be impacted by various pollution stresses, i.e., those with planktonic larval stages or sessile, unprotected sediment surface dwellers would be more susceptible to waste dumping stress than those species which brood their young or live in tubes. A knowledge of the trophic relationships of an invertebrate species with commercially valuable fish or crustaceans can also be very useful to those interested in fisheries.

At the community level, life history information is particularly useful for environmental impact statements, habitat characterizations, and monitoring studies. In these cases, one would most often want to know if known pollution "indicator species" are present, and what the trophic structure or predominant life history modes of the community are. In studies done over a period of time, changes in the trophic structure of a benthic macrofaunal community reflect changes in energy flow within the community, i.e., an increase in deposit feeders might indicate an increase in organic-rich deposition to the area.

Changes in life history modes from k to r strategies (McCall 1977) can explain changes in community structure and provide evidence for environmental alteration. Perhaps most important, knowledge of the life histories of individual species is essential for determining natural population fluctuations or trends as opposed to changes caused by pollution stress.

Because of this need for communication of life history information, we have decided to computerize our existing data to permit rapid on-line retrieval of information, fast updating and integration with other computerized benthic survey data.

Methods

A project of collecting and summarizing benthic invertebrate life history data from the available literature, personal communications and from Sandy Hook Laboratory benthic collections has been ongoing for the past few years. When the decision was made to computerize these data, we designed a format into which individual species information could be entered. This format is organized in categories (files) (which can be expanded) which we feel would be most informative to the user (see Attachment A). The data are stored on the ADP Network System and can be accessed through on-line terminals. Through the use of interactive commands, users may obtain a complete listing of life history characteristics for all species in the file or a listing for an individual species. By using the available 1022 System, the file may be searched and information of specific interest easily extracted. Output can also be routed to the Sandy Hook high speed printer and mailed to the user. To date, the file contains information on 58 species dominant in the New York Bight apex (Caracciolo and Steimle in press). We will continue to add new species, based on identified needs and priorities, and to update information on the species already in the file. A new published version of the life history file will be available July 1 of every year, upon request.

Results

Following in Attachment B are complete listings of all life history characteristics for the 58 species currently available in the file.

KNOWN ATLANTIC COAST DISTRIBUTION, BAY OF FUNDY TO FLORIDA:

- 1 BOREAL PROVINCE (BAY OF FUNDY TO CAPE COD)
- 2 VIRGINIAN PROVINCE (CAPE COD TO CAPE HATTERAS)
- 3 CAROLINIAN PROVINCE (SOUTH OF CAPE HATTERAS)
- 4 BOREAL AND VIRGINIAN PROVINCES (BAY OF FUNDY TO CAPE HATTERAS)
- 5 BOREAL + (A NORTH OR SOUTH EXTENSION OF THE BOREAL PROVINCE WHICH EXTENDS FROM THE BAY OF FUNDY TO CAPE COD)
- 6 VIRGINIAN+ (A NORTH OR SOUTH EXTENSION OF THE VIRGINIAN PROVINCE WHICH EXTENDS FROM CAPE COD TO CAPE HATTERAS)
- 7 BOREAL-VIRGINIAN + (NORTH/SOUTH EXTENSION OF BOREAL-VIRGINIAN PROVINCE WHICH EXTENDS BAY OF FUNDY-CAPE HATTERAS)
- 8 CAROLINIAN + (A NORTH OR SOUTH EXTENSION OF THE CAROLINIAN PROVINCE WHICH EXTENDS SOUTH OF CAPE HATTERAS)
- 9 ENTIRE ATLANTIC COAST FROM THE BAY OF FUNDY TO FLORIDA
- 10 NEW YORK BIGHT
- 11 NO INFORMATION AVAILABLE

ADULT LIFE STYLE:

- 1 FREE LIVING
- 2 TUBE DWELLER
- 3 MOTILE BURROW OR GALLERY DWELLER
- 4 ENCRUSTING
- 5 PARASITIC
- 6 BURROWER
- 7 SESSILE (ATTACHED)
- 8 PELAGIC
- 9 BORER
- 10 SEDIMENT SURFACE OR NEAR SURFACE DWELLER
- 11 UNKNOWN

RECORDED DEPTH RANGE:

- 1 SHALLOW DEPTHS TO APPROXIMATELY 25M
- 2 SHALLOW DEPTHS TO APPROXIMATELY 35M
- 3 SHALLOW DEPTHS TO APPROXIMATELY 50M
- 4 SHALLOW DEPTHS TO APPROXIMATELY 75M
- 5 SHALLOW DEPTHS TO APPROXIMATELY 100M
- 6 SHALLOW DEPTHS TO APPROXIMATELY 150M
- 7 SHALLOW DEPTHS TO APPROXIMATELY 200M
- 8 SHALLOW DEPTHS TO APPROXIMATELY 250M
- 9 SHALLOW DEPTHS TO APPROXIMATELY 500M
- 10 SHALLOW DEPTHS TO APPROXIMATELY 750M
- 11 SHALLOW DEPTHS TO APPROXIMATELY 1000M
- 12 SHALLOW DEPTHS TO APPROXIMATELY 2000M
- 13 SHALLOW DEPTHS TO APPROXIMATELY 3000M
- 14 SHALLOW DEPTHS TO APPROXIMATELY >3000M
- 15 NO INFORMATION AVAILABLE

MOST COMMONLY ASSOCIATED SEDIMENT GRAIN SIZE:

- 1 BOULDER
- 2 COBBLE
- 3 FEBBLE
- 4 GRANULE
- 5 VERY COARSE SAND
- 6 COARSE SAND
- 7 MEDIUM SAND
- 8 FINE SAND
- 9 VERY FINE SAND
- 10 COARSE SILT
- 11 MEDIUM SILT
- 12 FINE SILT
- 13 VERY FINE SILT
- 14 COARSE CLAY
- 15 MEDIUM CLAY
- 16 FINE CLAY
- 17 VERY FINE CLAY
- 18 VERY COARSE-COARSE SAND
- 19 COARSE-MEDIUM SAND
- 20 MEDIUM-FINE SAND
- 21 FINE-VERY FINE SAND
- 22 COARSE-MEDIUM SILT
- 23 FINE-VERY FINE SILT
- 24 FINE-VERY FINE SAND AND SILT
- 25 COARSE-MEDIUM-FINE SANDS
- 26 COARSE-MEDIUM-FINE SILTS
- 27 COARSE-MEDIUM-FINE SANDS AND COARSE-MEDIUM SILT
- 28 NO INFORMATION AVAILABLE

MOST COMMONLY ASSOCIATED SEDIMENT ORGANIC CONTENT:

- 1 HIGH (>5%)
- 2 MEDIUM (3-5%)
- 3 LOW (<3%)
- 4 MEDIUM TO HIGH (3->5%)
- 5 LOW (<3%) OR HIGH (>5%)
- 6 LOW TO MEDIUM (<3%-5%)
- 7 LOW, MEDIUM AND HIGH ORGANIC SEDIMENTS
- 8 NO INFORMATION AVAILABLE

ADULT FEEDING TYPE:

- 1 CARNIVORE
- 2 DEPOSIT FEEDER
- 3 SURFACE DEPOSIT FEEDER
- 4 SUSPENSION FEEDER
- 5 OMNIVORE
- 6 SCAVENGER
- 7 SUSPENSION/SURFACE DEPOSIT FEEDER
- 8 OMNIVORE/SURFACE DEPOSIT FEEDER
- 9 CARNIVORE/DEPOSIT FEEDER
- 10 SCAVENGER/SURFACE DEPOSIT FEEDER
- 11 SCAVENGER/CARNIVORE
- 12 DEPOSIT/SURFACE DEPOSIT FEEDER
- 13 OMNIVORE/SCAVENGER/SURFACE DEPOSIT FEEDER
- 14 OMNIVORE/SCAVENGER
- 15 OMNIVORE/DEPOSIT FEEDER
- 16 CARNIVORE/SURFACE DEPOSIT FEEDER
- 17 PARASITE
- 18 UNKNOWN

REPRODUCTIVE TYPE:

- 1 SEPARATE SEXES
- 2 TRANSFORMATION NONSEXUAL INTO MALE/FEMALE REPRODUCTIVE/EPITOKES, SWARMS AT SURFACE DURING SHEDDING OF EGGS & SPERM
- 3 HERMAPHRODITIC
- 4 ASEXUAL
- 5 ASEXUAL BUDDING OF MALE/FEMALE REPRODUCTIVE FORMS/EPITOKES, SWARMS AT SURFACE DURING SHEDDING OF EGGS&SPERM
- 6 SEPARATE SEXES/HERMAPHRODITIC
- 7 SEPARATE SEXES/ASEXUAL/HERMAPHRODITIC
- 8 SEPARATE SEXES/ASEXUAL
- 9 NO INFORMATION AVAILABLE

REPRODUCTIVE SEASON:

- 1 AUTUMN
- 2 WINTER
- 3 SPRING
- 4 SUMMER
- 5 AUTUMN/WINTER
- 6 AUTUMN/SPRING
- 7 AUTUMN/SUMMER
- 8 WINTER/SPRING
- 9 WINTER/SUMMER
- 10 SPRING/SUMMER

- 12 AUTUMN/WINTER/SUMMER
- 13 AUTUMN/SPRING/SUMMER
- 14 WINTER/SPRING/SUMMER
- 15 ALL YEAR
- 16 NO INFORMATION AVAILABLE

EGG NUMBER PER FEMALE:

- 1 <10
- 2 <50
- 3 <100
- 4 <500
- 5 <1000
- 6 <5000
- 7 <10,000
- 8 <20,000
- 9 <100,000
- 10 <500,000
- 11 <1,000,000
- 12 >1,000,00
- 13 NO INFORMATION AVAILABLE

DEVELOPMENT OF YOUNG:

- 1 BENTHIC LARVAE
- 2 PLANKTONIC LARVAE
- 3 POECILOGONY--ALTERNATING BENTHIC AND PLANKTONIC LARVAE
- 4 INITIAL BROODING OR PROTECTION OF EGGS FOLLOWED BY RELEASE INTO SEAWATER OF PLANKTONIC LARVAE.
- 5 INITIAL BROODING OR PROTECTION OF EGGS FOLLOWED BY RELEASE INTO SEAWATER OF BENTHIC LARVAE.
- 6 DIRECT DEVELOPMENT OF YOUNG IN BROOD CHAMBER OF FEMALE
- 7 INITIAL BROODING OR DIRECT LIBERATION OF EGGS INTO SEAWATER FOLLOWED BY DEVELOPMENT OF PLANKTONIC LARVAE.
- 8 INITIAL BROODING OF EGGS FOLLOWED BY RELEASE OF BENTHIC OR PLANKTONIC LARVAE
- 9 DIRECT DEVELOPMENT OF EXTERNALLY LAID EGGS (USUALLY IN PROTECTIVE SHELL OR CASE) INTO JUVENILE FORM.
- 10 DIRECT DEVELOPMENT OF YOUNG IN BODY OF FEMALE OR DIRECT DEVELOPMENT OF EXTERNALLY LAID EGGS INTO JUVENILE FORM.
- 11 FRAGMENTATION OF NEW INDIVIDUALS
- 12 VARIOUS MODES, DEPENDING ON SPECIES.
- 13 NO INFORMATION AVAILABLE

MAXIMUM RECORDED LIFE SPAN:

- 1 < 1 YEAR
- 2 APPROXIMATELY 1 YEARS
- 3 APPROXIMATELY 2 YEARS
- 4 APPROXIMATELY 3 YEARS
- 5 APPROXIMATELY 5 YEARS
- 6 APPROXIMATELY 10 YEARS
- 7 APPROXIMATELY 15 YEARS
- 8 APPROXIMATELY 20 YEARS
- 9 APPROXIMATELY 30 YEARS
- 10 APPROXIMATELY 40 YEARS
- 11 APPROXIMATELY 50 YEARS
- 12 APPROXIMATELY 60 YEARS
- 13 NO INFORMATION AVAILABLE

VALUE TO FISHERIES:

- 1 HARVESTIBLE AS FOOD FOR MAN
- 2 SIGNIFICANT PREY FOR FISH AND/OR COMMERCIALY VALUABLE DECAPOD SPECIES
- 3 PREDATOR OF FISH EGGS OR JUVENILES
- 4 HARVESTIBLE AS FOOD FOR MAN AND SIGNIFICANT PREY FOR FISH AND/OR COMMERCIALY VALUABLE DECAPODS
- 5 FOOD OR HABITAT COMPETITOR OF VALUABLE SPECIES
- 6 PROVIDES HABITAT FOR LARVAL, JUVENILE OR ADULT STAGES OF VALUABLE SPECIES
- 7 NO INFORMATION AVAILABLE

ADDITIONAL INFORMATION:

MAXIMUM SIZE: APPROXIMATELY 125MM

ATLANTIC COAST DISTRIBUTION:

BOREAL AND VIRGINIAN PROVINCES (GAY HE FUNDY TO CAPE HATIERAS)

ADULT LIFE STYLE: SEDIMENT SURFACE OR NEAR SURFACE DWELLER

DEPTH RANGE: SHALLOW DEPTHS TO APPROXIMATELY 35M

MOST COMMON, ASSOC. SEDIM. GRAIN SIZE: FINE-VERY FINE SAND

MOST COMMON, ASSOC. SEDIM. ORG. CONTENT: HIGH (>5%)

ADULT FEEDING TYPE: SUSPENSION FEEDER

REPRODUCTIVE TYPE:
SEPARATE SEXES

REPRODUCTIVE SEASON: AUTUMN/SPRING/SUMMER

EGG NUMBER PER FEMALE: NO INFORMATION AVAILABLE

DEVELOPMENT OF YOUNG:
PLANKTONIC LARVAE

MAXIMUM RECORDED LIFE SPAN: APPROXIMATELY 60 YEARS

VALUE TO FISHERIES:
HARVESTIBLE AS FOOD FOR MAN

ADDITIONAL INFORMATION: I-STRATEGIST (INTERMEDIATE BETWEEN R AND K ADAPTIVE STRATEGIES)

ADULT LIFE STYLE: BURROWER

DEPTH RANGE: SHALLOW DEPTHS TO APPROXIMATELY 500M

MOST COMMON ASSOC. SEDIM. GRAIN SIZE: COARSE-MEDIUM SAND

MOST COMMON ASSOC. SEDIM. ORG. CONTENT: LOW (<3%)

ADULT FEEDING TYPE: CARNIVORE

REPRODUCTIVE TYPE:

SEPARATE SEXES

REPRODUCTIVE SEASON: NO INFORMATION AVAILABLE

EGG NUMBER PER FEMALE: NO INFORMATION AVAILABLE

DEVELOPMENT OF YOUNG:

INITIAL BROODING OR PROTECTION OF EGGS FOLLOWED BY RELEASE INTO SEAWATER OF BENTHIC LARVAE.

MAXIMUM RECORDED LIFE SPAN: NO INFORMATION AVAILABLE

VALUE TO FISHERIES:

SIGNIFICANT PREY FOR FISH AND/OR COMMERCIALY VALUABLE DECAPOD SPECIES

ADDITIONAL INFORMATION: I-STRATEGIST (INTERMEDIATE BETWEEN R AND K ADAPTIVE STRATEGIES)

REFERENCES: THE FOLLOWING ARE REFERENCE NUMBERS. CONTACT JAN WARD FTS 342 8217 FOR MORE INFORMATION.
