

Supplementary Table – Fishers were interviewed via phone, email, and in person to determine if they had targeted or encountered aggregating species of interest. Interviews were conducted biweekly during the predicted spawning seasons. The following questions were used to establish the occurrence of an FSA.

Fisher Interview Questions		
1	What aggregating species did you target?	
2	Where was the aggregation observed?	
3	At what depth did aggregation fishing take place?	
4	a	Did you observe milt or eggs flowing from the fish upon capture?
	b	If kept, did you notice enlarged gonads in fish carcasses?
5	Approximately how large was the aggregation?	
6	a	When did you see the aggregation?
	b	Have you seen the aggregation before?
	c	How long have you been fishing the aggregation?
7	Can you provide a general description of the habitat where aggregations were observed (e.g., artificial reef or natural reef)?	
8	Were there any notable behaviors exhibited by aggregating fish.
