Marine Ecology Progress Series 574: 49–64 (2017)

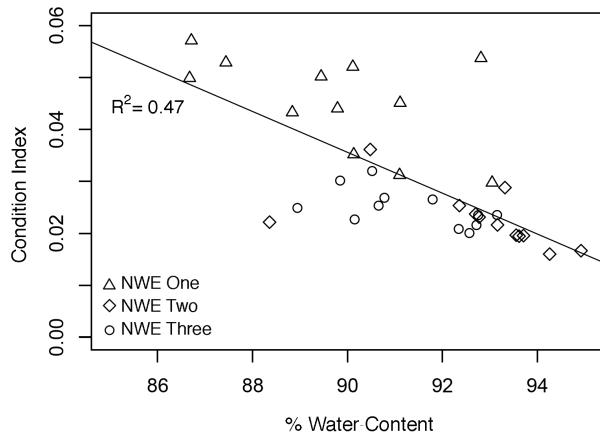

Figure S1: Condition index (including gills) and % water content in NWE One, Two and Three mussels are negatively correlated (Pearson correlation $p < 0.001$).

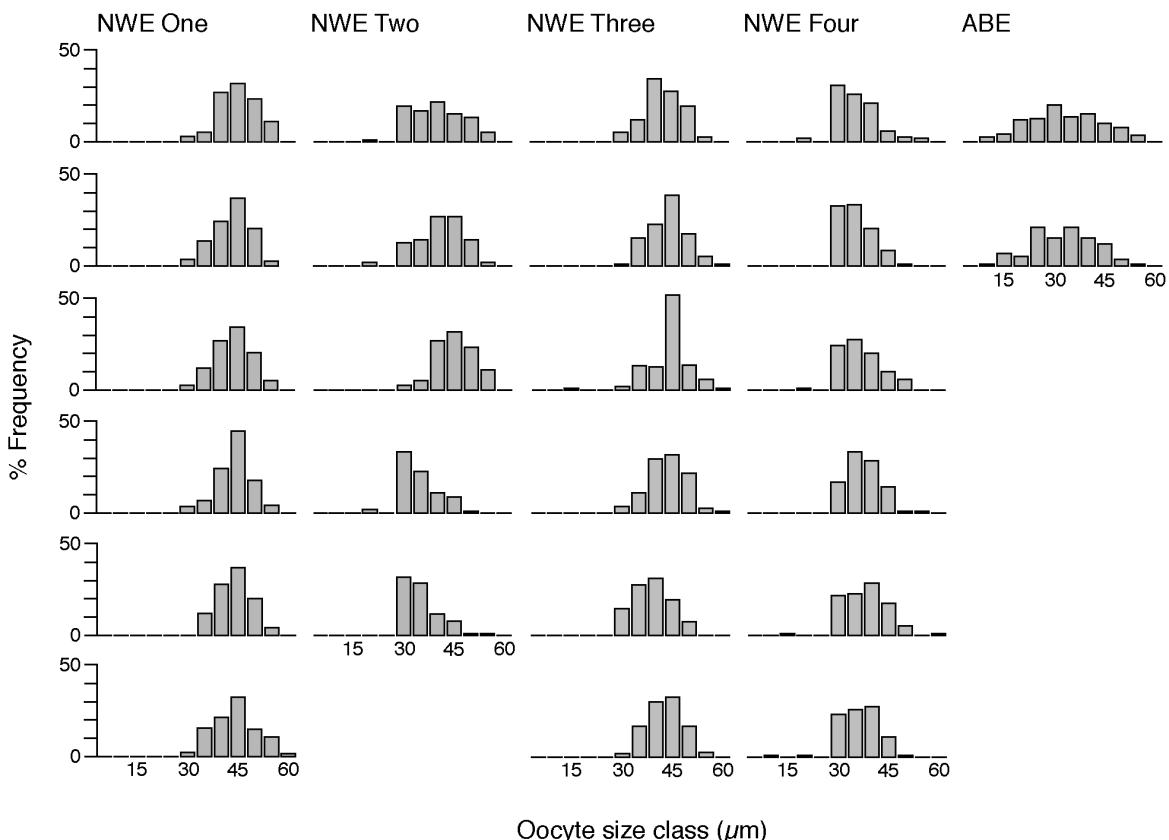

Figure S2: Oocyte size frequency distributions for each individual from all sites. Individual mussel distributions are comprised of 120 oocytes.

Table S1. Ranges of methane concentration, sulphide concentration, water weight, and condition indices in *Bathymodiolus* species (\pm standard deviation). ND: not detectable; - ; not available; T: thiotrophic; M: methanotrophic; subscripts indicates estimated values from the respective publications, 1) Tunnicliffe et al. (2009), 2) Podowski et al. (2010); 3) Sarradin et al. (1999).
