### **Abstract**

A summary of hydrographic observations for 16 surveys on the northeast continental shelf during 1994 is presented. Distributions of station position, surface and bottom temperature, salinity, and temperature anomaly are portrayed. The average surface and bottom temperature and salinity have been calculated for each survey in five geographic regions over the northeast continental shelf: western Gulf of Maine (GOMW), eastern Gulf of Maine (GOME), Georges Bank (GB), northern Middle Atlantic Bight (MABN) and southern Middle Atlantic Bight (MABS).

Unlike temperature, salinity properties of the northeast shelf exhibit large interannual variability (Manning 1990). Areal average salinity calculations are included in this report because yearly changes may be an important hydrographic characteristic. The 1994 regional distributions show that the surface and bottom salinity of the northern MAB was fresher than the MARMAP reference for nearly all observations.

### **Introduction**

The Northeast Fisheries Science Center (NEFSC) conducts several different surveys off the northeast continental shelf each year. Complete coverage of the shelf (Cape Hatteras to the Gulf of Maine) occurs during the spring and fall bottom-trawl surveys only. Station coverage on other cruises throughout the year varies. The oceanographic conditions during 1991, 1992 and 1993 have been described in Holzwarth-Davis and Taylor (1991, 1992 and 1993).

Temperature and salinity observations from 16 NEFSC surveys conducted during 1994 are summarized and presented in this report. Cruise operation summaries are presented for all cruises. Distribution plots of surface and bottom temperature, salinity, and temperature anomaly are contoured where sufficient data are available. Areal average temperature and salinity and the corresponding anomalies are also presented for the five different regions on the shelf. The data are presented chronologically in atlas form. No attempt has been made here to analyze the data or discuss in detail individual observations from the cruises.

#### **Data and Methods:**

Temperature and salinity measurements were obtained with a Seabird SBE 19 conductivity, temperature and pressure recording profiling instrument (Profiler). This instrument measures the pressure, temperature and conductivity of the water twice per second. Two different methods of deployment were used depending upon the type of work conducted at a station. Whenever a plankton haul was done, the Profiler was placed above the bongo nets, and a double oblique tow was made. If no plankton haul was done, the Profiler was deployed vertically down and up through the water column. Salinity samples are taken from the bottom of a vertical profile cast in order to calibrate the conductivity data. These samples are analyzed on shore with a Guildline Autosal salinometer.

The data from the *R/V Gloria Michelle* shrimp cruise were collected with expendable bathythermograph (XBT) probes. This data

set contains pressure and temperature only.

All raw Profiler data were processed using the Seabird manufactured software: DATCNV, ALIGNCTD, BINAVG, DERIVE, and ASCIIOUT to produce 1 decibar averaged ascii files. The data were edited, cleaned, and converted to a standard 80-column ASCII formatted cruise file and are archived in the NEFSC anonymous FTP account (whsun2:/ftp/pub/hydro).

Station distributions and horizontal contour plots of the surface and bottom temperature, salinity, and temperature anomaly were prepared for each survey. Areal average temperatures and salinities were calculated for the five regions of the northeast continental shelf shown in Figure 1: western and eastern Gulf of Maine, Georges Bank, and the northern and southern Middle Atlantic Bight. The areal averaging was done using the method described in Holzwarth and Mountain (1990). The areal averages and anomalies were plotted against the mid-date (calendar day) of all observations within a region for each cruise.

### **Results**

The NEFSC cruises for which data are presented in this report are listed in Table 1. A summary of each cruise is listed in Appendix A and includes information on the type of cruise, its objectives, dates, the number of hydrographic stations, type(s) of instruments used, salinity calibration value, and notes pertaining to instrument performance.

Table 2 lists the surface and bottom areal average

temperatures and temperature anomalies that were calculated for each of the five regions. Table 3 lists the surface and bottom areal average salinity and salinity anomalies for the same five regions. For most cruises, the areal averages and anomalies could not be calculated for all regions due to limited station coverage. For several such cases a simple average (not an areal weighted mean) was determined for the observations in the region; these values are indicated by an asterisk. The standard deviations are also listed. SDV1 indicates how well the calculated anomaly represents the true regional average anomaly. SDV2 is an indicator of how closely the areal average matches the anomaly at any particular location within that region (see Holzwarth and Mountain, 1990 for explanation of SDV1 and SDV2).

Figures 2 through 5 present the time series of surface and bottom average temperature/salinity and temperature/salinity anomaly for each region. Station positions and distributions of surface and bottom temperature, salinity, and temperature anomaly for the different cruises are presented in Figures 6 through 81. Contour figures were not prepared for REL9401 and DEL9412 because there were not enough hydrographic stations occupied. Temperature anomaly distributions were not produced for R/V *Delaware* 9408 because the distance to standard MARMAP stations was too great for a reliable comparison to be made. No salinity samples were taken on the R/V *Gloria Michelle* 9412; consequently, no salinity plots were generated.

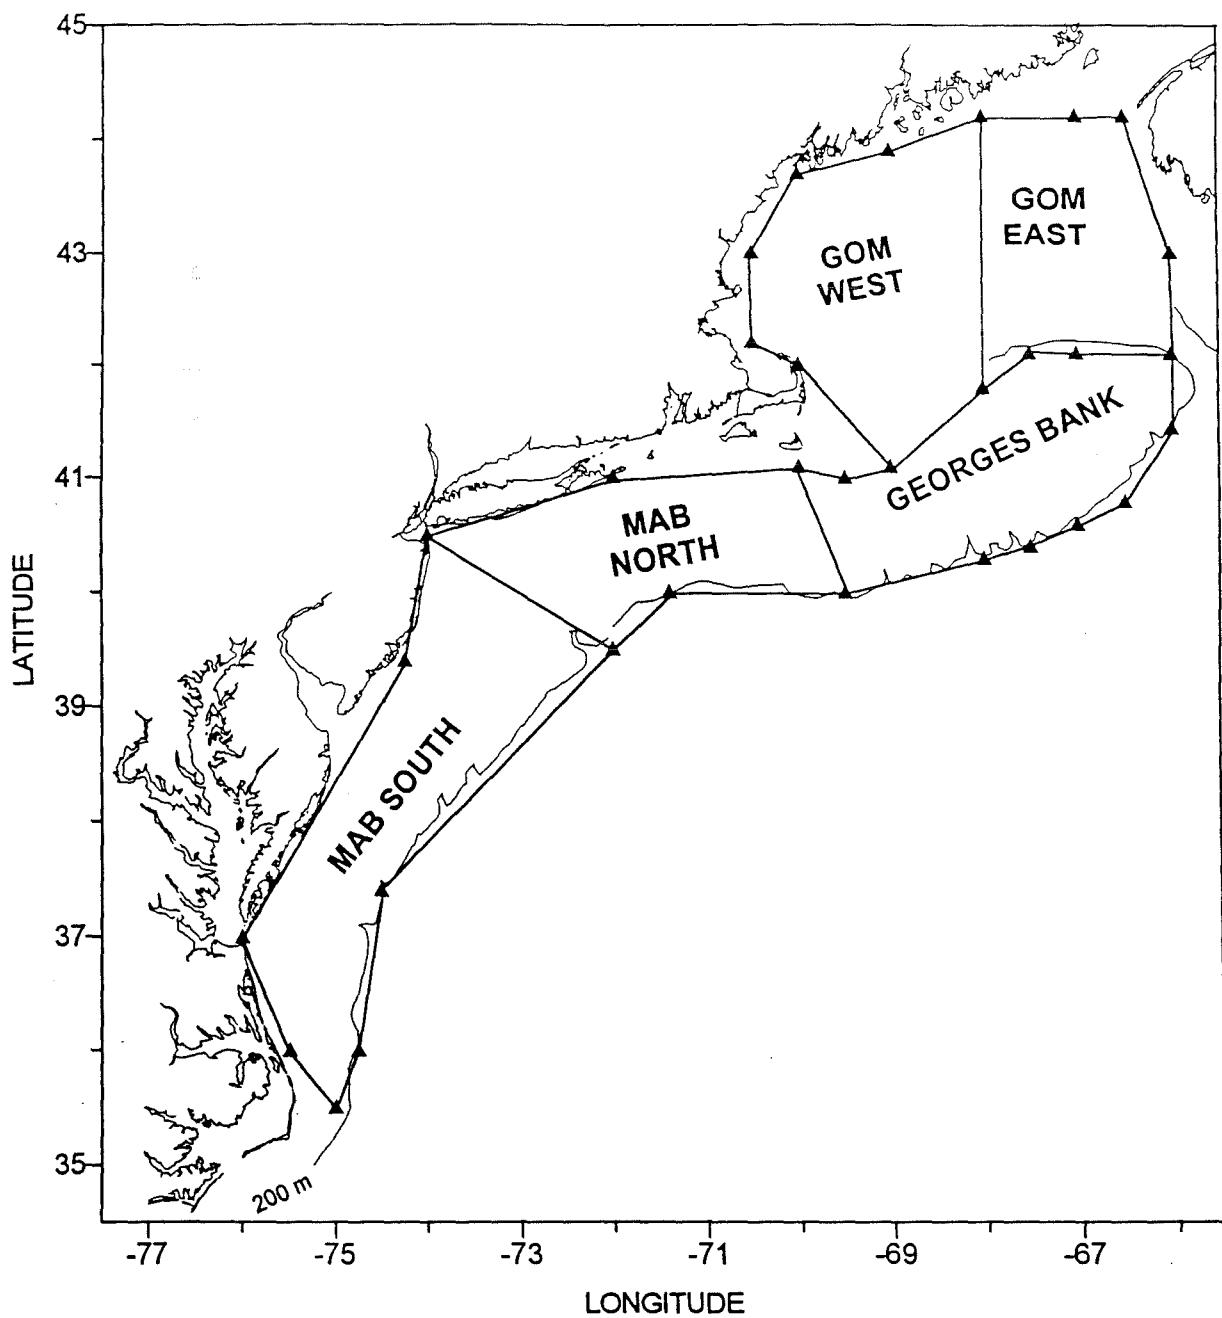

### **Discussion**

The areal average temperature distributions for each defined region show a fairly typical yearly pattern. Warmer surface temperatures (relative to the MARMAP reference period) occurred during late June through mid-August of 1994 with the exception of the southern MAB.

In the past, areal average salinity values have not been included as part of the yearly atlas because salinity properties of the northeast shelf exhibit large interannual variability. Much of this variability can be attributed to yearly changes in river runoff and precipitation (Manning 1990). The regional average salinities and anomalies are included in this atlas because it was felt that this large interannual variability is an important characteristic of the hydrography of the northeast continental shelf. The surface salinity distribution of the northern MAB showed fresher conditions than the MARMAP reference period for all observations throughout the year.

<sup>1</sup> "Cruise", the code for a cruise; "CD", the calendar mid-date of all the stations within a region for a cruise; "#obs", the number of observations included in each average; "Salt", the areal average salinity; "Anomaly", the areal average salinity anomaly, "SDV1", the standard deviation associated with the average salinity anomaly; "SDV2", the standard deviation of the individual anomalies from which the average anomaly was derived.

\* A true areal average could not be calculated due to poor station coverage. The average values listed were derived from a simple average of the observations within the region.

APPENDIX A. Summary of cruise information and hydrographic work completed.

Appendix A. Summary of Cruise Information and Hydrographic Work Completed.

Vessel: R/V Delaware II	Cruise: 9401
-------------------------	--------------

Program: Larval Herring/Sand Lance Study

Dates: 6 - 18 January

Sea days: 13

Instrument(s): Profiler 1447/Profiler 1468

**Cruise Objectives:** To (1) determine the distribution, abundance and production of herring and sand lance larvae, (2) index spawning biomass for the target species and (3) provide systematic collections of herring larvae for age and growth estimates through otolith analysis.

Total # of stations: 95

# of vertical CTD/Profiler casts: 12

# of double oblique profiler casts: 95

# XBT drops: 0

# salinity samples: 12

salt correction: 0/+0.021

**Special Notes:** Profiler 1447 malfunctioned during the first half of the cruise. At station 30 it was replaced by profiler 1468, which performed well.

\*\*\*\*\*

Vessel: R/V Delaware II	Cruise: 9402
-------------------------	--------------

Program: Winter Bottom Trawl Survey

Dates: 31 January - 23 February

Sea days: 19

Instrument(s): Profiler 0853

**Cruise Objectives:** To (1) determine the winter distribution and relative abundance of selected fish and invertebrate species, (2) collect biological samples for studies of age and growth relationships, fecundity, maturity and food habits, (3) collect hydrographic and meteorological data, (4) collect ichthyoplankton and zooplankton samples, and (5) make data and sample collections for cooperative researchers and programs.

Total # of stations: 156

# of vertical CTD/Profiler casts: 153  
 # of double oblique profiler casts: 22  
     # XBT drops: 0  
     # salinity samples: 22  
     salt correction: +0.02

**Special Notes:** Profiler 0853 performed well despite a few minor problems.

\*\*\*\*\*

**Vessel:** R/V Delaware II

**Cruise:** 9403

**Program:** Spring Bottom Trawl Survey  
**Dates:** 28 February - 27 April  
**Sea days:** 37  
**Instrument(s):** Profiler 0851/Profiler 0853

**Cruise Objectives:** To (1) determine the spring distribution and relative abundance of fish and invertebrate species; (2) collect biological samples for studies of age and growth relationships, fecundity, maturity and food habits, (3) collect hydrographic and meteorological data, and (4) make collections of data and samples for cooperative researchers and programs.

Total # of stations: 311  
 # of vertical CTD/Profiler casts: 246  
 # of double oblique profiler casts: 70  
     # XBT drops: 0  
     # salinity samples: 42/8  
     salt correction: 0/0

**Special Notes:** Legs II and III of this cruise, originally scheduled to be carried out aboard R/V Albatross IV, were rescheduled to Delaware II due to mechanical problems aboard Albatross IV. Leg I returned one day early due to adverse weather conditions. Leg III departed two days late due to operational problems and arrived two days early after all scheduled work was completed. Near the end of leg I, the pressure port on profiler 0851 was damaged. Profiler 0853 was used during leg III, but there continued to be frequent problems with data collected in real time mode. The boom wire termination was respliced.

\*\*\*\*\*

**Vessel:** R/V Albatross IV

**Cruise:** 9403

**Program:** GLOBEC Stratification Study  
**Dates:** 3 - 28 May  
**Sea days:** 25  
**Instrument(s):** Profiler 1496

**Cruise Objectives:** To (1) determine the distribution and abundance of larval and pelagic juvenile cod and haddock within a specific sampling grid on the southern portion of Georges Bank, (2) locate well-mixed and stratified stations based on hydrography and the presence of fish larvae, (3) sample to determine the abundance and vertical and temporal distribution of fish larvae, copepods and invertebrate predators, (4) examine gut contents and determine digestion rates of selected predators, (5) test immunological methods for the detection and identification of copepod prey, (6) survey hydrographic conditions between the areas of study and, (7) collect and process fish larvae for biochemical studies of metabolism.

Total # of stations: 87  
# of vertical CTD/Profiler casts: 13  
# of double oblique profiler casts: 67  
# XBT drops: 0  
# salinity samples: 13  
salt correction: +0.023

**Special Notes:** Leg I was delayed one day due to mechanical problems. Leg II departed on schedule but returned the same day due to rough seas. Leg II departed again on 18 May. This cruise was done in conjunction with Delaware II cruise DEL9404.

\*\*\*\*\*

**Vessel:** R/V Delaware II

**Cruise:** 9404

**Program:** Predator-Prey Study  
**Dates:** 2 - 27 May  
**Sea days:** 24  
**Instrument(s):** Profiler 0853

**Cruise Objectives:** To (1) examine the impact of predation by pelagic fish on the survival of age-zero fish and (2) collect biological samples for use in the development of DNA probes for identification of well-digested fish larvae in stomach contents.

Total # of stations: 198  
# of vertical CTD/Profiler casts: 20  
# of double oblique profiler casts: 197  
# XBT drops: 0

# salinity samples: 13  
salt correction: 0

**Special Notes:** During the last several stations of leg II, there was severe spiking in the data due to termination problems. Also, there were not enough salinity calibration samples taken during the cruise to calculate an accurate salt correction.

**Vessel:** R/V Delaware II

**Cruise:** 9406

Program: Predator-Prey Study

Dates: 20 - 30 June

Sea days: 11

Instrument(s): Profiler 0851

**Cruise Objectives:** To (1) examine the effect of predation by pelagic and demersal fish on the survival of age-zero fish and (2) collect biological samples for use in the development of DNA probes for the identification of well-digested fish larvae in stomach contents.

Total # of stations: 106

# of vertical CTD/Profiler casts: 10

# of double oblique profiler casts: 106

# XBT drops: 0

# salinity samples: 10

salt correction: 0

**Special Notes:** A number of salt samples were taken in a salinity gradient and as a result, were not good for quality control comparison. The cruise ended one day early after all scheduled work was completed.

\*\*\*\*\*

**Vessel:** R/V Albatross IV

**Cruise:** 9405

Program: Sea Scallop Survey

Dates: 22 June - 18 July

Sea days: 20

Instrument(s): Profiler 0360

**Cruise Objectives:** To (1) determine the distribution and relative abundance of the sea scallop Placopecten magellanicus and Iceland scallop Chlamys islandica, (2) collect biological samples and data relative to assessment needs, (3) monitor hydrographic and meteorological conditions and (4) make collections for interested scientists at other institutions and laboratories.

Total # of stations: 153  
 # of vertical CTD/Profiler casts: 156  
 # of double oblique profiler casts: 0  
 # XBT drops: 0  
 # salinity samples: 36  
 salt correction: 0

**Special Notes:** The cruise departed two days late due to mechanical problems and returned two days early after all work was completed.

\*\*\*\*\*

Vessel: R/V Delaware II

Cruise: 9407

Program: Shellfish Resource Assessment Survey  
 Dates: 18 July - 24 August  
 Sea days: 33  
 Instrument(s): Profiler 0851

**Cruise Objectives:** To (1) investigate the distribution and relative abundance of the surf clam Spisula solidissima, ocean quahog Arctica islandica and other mollusks, (2) collect biological samples and data relative to assessment needs, (3) monitor hydrographic and meteorological conditions, (4) make collections for interested scientists from other institutions and NMFS laboratories and (5) determine the abundance and range of the ocean quahog fishery along the eastern Maine coast.

Total # of stations: 136  
 # of vertical CTD/Profiler casts: 141  
 # of double oblique profiler casts: 0  
 # XBT drops: 0  
 # salinity samples: 34  
 salt correction: +0.01

\*\*\*\*\*

Vessel: R/V Gloria Michelle

Cruise: 9412

Program: Gulf of Maine Northern Shrimp Survey  
 Dates: 2 - 11 August  
 Sea days: 10  
 Instrument(s): N/A

**Cruise Objectives:** To investigate the population of northern shrimp in the Gulf of Maine.

Total # of stations: 49  
 # of vertical CTD/Profiler casts: 0  
 # of double oblique profiler casts: 0  
 # XBT drops: 71  
 # salinity samples: 0  
 salt correction: 0

\*\*\*\*\*

**Vessel:** R/V Albatross IV

**Cruise:** 9406

**Program:** Gulf of Maine Bottom Trawl  
**Dates:** 26 July - 5 August  
**Sea days:** 11  
**Instrument(s):** Profiler 0360

**Cruise Objectives:** To (1) determine the seasonal distribution and relative abundance of fish and invertebrate species, (2) collect biological samples for studies of age and growth relationships, fecundity, maturity and food habits, (3) collect hydrographic and meteorological samples and data, (4) make sample collections for cooperative researchers and programs, (5) sample groundfish nursery areas in order to develop pre-recruit indices.

Total # of stations: 71  
 # of vertical CTD/Profiler casts: 72  
 # of double oblique profiler casts: 0  
 # XBT drops: 0  
 # salinity samples: 16  
 salt correction: 0

**Special Notes:** This cruise departed one day late due to mechanical problems.

\*\*\*\*\*

**Vessel:** Albatross IV

**Cruise:** 9407

**Program:** Predator - Prey Study  
**Dates:** 22 August - 2 September  
**Sea days:** 10  
**Instrument(s):** Profiler 1447

**Cruise Objectives:** To (1) investigate the impact of predation on the survival of age-zero cod and haddock during their early-

demersal phase of life-history and (2) collect biological samples for the development of DNA and polyclonal immunoassay probes to identify well digested age-zero cod and haddock stomach contents.

Total # of stations: 105  
# of vertical CTD/Profiler casts: 56  
# of double oblique profiler casts: 36  
# XBT drops: 0  
# salinity samples: 13  
salt correction: 0

\*\*\*\*\*

Vessel: Delaware II

Cruise: 9408

Program: Lobster Trawl Comparison Study  
Dates: 6 - 12 September  
Sea days: 7  
Instrument(s): Profiler 0851

**Cruise Objectives:** To (1) determine the seasonal distribution and relative abundance of American lobsters in Cape Cod Bay, (2) correlate abundance indices with the Massachusetts Division of Marine Fisheries Survey, and (3) collect basic relative abundance and size composition of other species in the region.

Total # of stations: 27  
# of vertical CTD/Profiler casts: 26  
# of double oblique profiler casts: 0  
# XBT drops: 0  
# salinity samples: 5  
salt correction: 0

\*\*\*\*\*

Vessel: Delaware II

Cruise: 9409

Program: Gear Comparison Study  
Dates: 19 - 29 September  
Sea days: 10  
Instrument(s): Profiler 0851

**Cruise Objectives:** To measure and collect data on NEFSC standardized otter trawls and ship performance.

Total # of stations: 123  
# of vertical CTD/Profiler casts: 58

# of double oblique profiler casts: 0  
                                   # XBT drops: 0  
                           # salinity samples: 12  
                           salt correction: +0.01

\*\*\*\*\*

**Vessel:** Albatross IV

**Cruise:** 9409

**Program:** Fall Bottom Trawl Survey  
**Dates:** 6 September - 27 October  
**Sea days:** 37  
**Instrument(s):** Profiler 0853

**Cruise Objectives:** To (1) determine the autumn distribution and relative abundance of fish and selected invertebrate species, (2) collect biological samples for studies of age and growth relationships, fecundity, maturing and food habits, (3) collect hydrographic and meteorological data, (4) collect samples of ichthyoplankton and zooplankton, (5) make data and sample collections for cooperative researchers and programs.

Total # of stations: 336  
# of vertical CTD/Profiler casts: 170  
# of double oblique profiler casts: 121  
                                  # XBT drops: 0  
                          # salinity samples: 41  
                          salt correction: +0.014

**Special Notes:** Leg I returned one day early due to mechanical problems. Leg IV left one day late because of mechanical problems but returned a day early after the survey was completed.

\*\*\*\*\*

**Vessel:** R/V Relentless

**Cruise:** 9401

**Program:** Marine Mammal Survey/Warm Core Ring Study  
**Dates:** 22 August - 2 September  
**Sea days:** 9  
**Instrument(s):** Profiler 1496

**Cruise Objectives:** To (1) investigate fine-scale cetacean distribution in a warm core ring feature, (2) determine if the distribution of cetaceans is continuous through a warm core ring, (3) conduct line-transect population surveys within the study area, (4) collect information on the relationship between cetaceans and

oceanographic features using real time satellite sea surface data, (5) collect CTD and zooplankton data at selected sites, (6) conduct marine mammal photographic and video identification methodology studies using an inflatable boat.

Total # of stations: 10  
 # of vertical CTD/Profiler casts: 10  
 # of double oblique profiler casts: 0  
 # XBT drops: 0  
 # salinity samples: 0  
 salt correction: 0

\*\*\*\*\*

**Vessel:** R/V Albatross IV

**Cruise:** 9410

**Program:** GLOBEC Broad Scale Survey  
**Dates:** 8 - 18 November  
**Sea days:** 8  
**Instrument(s):** Profiler 1468

**Cruise Objectives:** To (1) establish and test sampling protocols for the broad scale survey component of the US Georges Bank study conducted in 1995, (2) train personnel who will conduct the surveys in the operation of the sampling systems and sampling protocols to be used, (3) determine the late fall abundance and age composition of target zooplankton on Georges Bank and in adjacent GOM and slope waters, (4) determine the size of C4 and C5 Calanus and Pseudocalanus on Georges Bank and in adjacent GOM and slope water, (6) collect large quantities of Calanus which are to be frozen for Mackerel feeding experiments funded by a NOAA Coastal Ocean grant.

Total # of stations: 26  
 # of vertical CTD/Profiler casts: 5  
 # of double oblique profiler casts: 27  
 # XBT drops: 0  
 # salinity samples: 5  
 salt correction: +0.025

**Vessel:** R/V Delaware II

**Cruise:** 9412

**Program:** Atlantic Cod Spawning Study

**Dates:** 29 November - 12 December  
**Sea days:** 14  
**Instrument(s):** Profiler 0851/1496

**Cruise Objectives:** To (1) study the reproductive biology of Atlantic Cod in the Georges Bank/Gulf of Maine region, (2) collect blood samples for a stock identification study and (3) collect live zooplankton for a URI-NOAA Coastal Ocean Program mackerel feeding study.

Total # of stations: 94  
# of vertical CTD/Profiler casts: 4  
# of double oblique profiler casts: 0  
    # XBT drops: 0  
    # salinity samples: 4  
    salt correction: 0
