Summaries of Provisional Foreign and Joint-Venture Groundfish Catches
(Metric Tons) in the Northeast Pacific Ocean and Bering Sea, 1985

compiled by

Jerald Berger, Sueto Murai, Russell Nelson, Jr. and Janet Wall

This booklet contains summaries of the provisional 1985 foreign groundfish catches as estimated by the U.S. Foreign Fisheries Observer Program. The U.S. catch estimates consist of a blend of the estimates derived from observer data in those week-nation-area-vessel class data cells with observer coverage of 20 percent or greater and the foreign reported catches for those data cells with observer coverage less than 20 percent. A further qualification is that if the estimate based on observer data is within 10 percent of the foreign reported catch for the data cell, the foreign reported catch is used. Statistical areas of the northeast Pacific Ocean and Bering Sea are shown in Figure 1.

A description of the terms employed is given for each major area.

1/ TALFF is an acronym for total allowable level of foreign fishing. JVP is an acronym for joint venture processing.

2/ Western and Central Gulf areas combined.

3/ Including W & C.

4/ PSC is an acronym for prohibited species catch. In the Gulf of Alaska, catches of sablefish, the POP complex and the other rockfish group were not allowed to be retained. A quota was still set as to the number of tons that could be caught.

5/ Foreign nations were only allowed to fish in the W. Yakutat district. The optimum yield in that district was 1,680 t.
