Director, SEFSC

## INTRODUCTION

The NOAA Ship *Pisces* hosted the Southeast Fishery-Independent Survey (SEFIS) for a research cruise in continental shelf and shelf-break waters off North and South Carolina in 2023. SEFIS was created by the National Marine Fisheries Service in 2010 and operates out of the NOAA-Beaufort Laboratory. This survey was created to conduct applied fishery-independent sampling and related research focusing on the assessment of spatial variability in distribution and abundance of red snapper and other reef species within the snapper-grouper complex, via data collected from fish traps, video cameras, and acoustics.

The original plan was to conduct primary SEFIS trap-video operations during two legs (25 days at sea (DAS) in total), and zig-zag random mapping during two legs (24 DAS; Figure 1). However, after some initial trap-video DAS were lost due to mechanical issues, some mapping days were converted to trap-video days. Storms and other issues resulted in some additional loss of DAS. A total of 32 DAS were eventually realized out of 49 DAS planned.

<b>Original plan</b>	<b>Leg</b>	<b>Objective</b>	<b>Planned DAS</b>	<b>Realized DAS</b>
August 3-7	Leg 1	Transit	5	
August 7-11	Leg 1	Mapping	4	
August 13-25	Leg 2	Trap-video sampling	13	
August 28 – Sept 8	Leg 3	Trap-video sampling	12	
Sept 11 – 30	Leg 4	Mapping	20	
<b>Revised plan</b>				
August 3-7	Leg 1	Transit	5	5
August 7-11	Leg 1	Mapping	4	3 <sup>a</sup>
August 13-25	Leg 2	Trap-video sampling	13	9 <sup>b</sup>
August 28 – Sept 8	Leg 3	Trap-video sampling	12	3 <sup>c</sup>
Sept 11 – 23	Leg 4A <sup>f</sup>	Trap-video sampling	13	12 <sup>d</sup>
Sept 23 – 30	Leg 4B	Mapping	8	6 <sup>e</sup>
<b>Total</b>			<b>54</b>	<b>38</b>
a Personnel emergency resulting in departure one day later than expected				
b Bow thruster failure resulted in loss of 4 DAS				
c Engine oil leak caused loss of 9 DAS and unplanned pickup of scientists in Norfolk, VA				
d Tropical Storm Ophelia caused loss of 1 DAS and unplanned disembarkation of scientists in Norfolk, VA				
e Tropical Storm Ophelia (1 DAS) and ship mechanical issues (1 DAS) caused 2-day late departure				
f An at-sea transfer of scientists occurred on September 18 <sup>th</sup> during leg 4A				

*Summary of Objectives:*

1. Fishery-independent sampling of randomly selected stations in North and South Carolina. Baited chevron traps, with two mounted high-definition video cameras were utilized for (a) hardbottom reef fish community assessments, (b) collection of reef fish for biological samples (i.e., otoliths and gonads), and (c) comparative gear sampling (cameras versus traps).
2. Use video cameras on chevron traps to address trap selectivity issues, locate and describe hardbottom habitats, and provide an additional index of abundance for stock assessments.
3. Use a conductivity, temperature, depth (CTD) instrument package to collect environmental data (temperature, salinity, dissolved oxygen, turbidity) at camera-trap sampling locations.
4. Multibeam sonar mapping (random zig-zag pattern) to estimate proportion and amount of hardbottom across survey range.
5. Collection of EK-80 data as part of the greater amberjack abundance estimation project.

## MATERIALS AND METHODS

### *Camera-Trap Sampling*

Camera-trap gear consisted of two high definition video cameras mounted to a chevron fish trap. Additionally, one of the six traps in a group included an attached stereo-video camera for future fish length measurements. Chevron traps were composed of plastic-coated wire mesh. GoPro cameras (model HD Hero® 9) were attached above the mouth and nose of the trap. Traps were baited with Atlantic menhaden, *Brevoortia tyrannus*, and video cameras were set to record before deployment. Camera-traps were deployed at least 200 m apart on suspected or known hardbottom habitats, and soak time was targeted for approximately 90 min. Camera-traps were most often deployed in sets of six. A CTD cast (see environmental data collection) was conducted while traps were soaking. Fish catches were processed after trap retrieval. All fish were enumerated, weighed, and measured to the nearest millimeter. Individuals of priority species (mostly species found in the snapper-grouper complex) were further processed for additional lengths and biological samples (otoliths, gonads, and DNA). Video files were downloaded and backed up on digital media storage devices. Biological samples and video files were brought to the Beaufort Laboratory for further processing and analysis.

### *Environmental Data Collection*

Environmental data were collected with a Seabird CTD instrument package (model SBE 9) and Scientific Computer System (SCS) software. CTD casts were conducted near the middle of the camera-trap soak period; instruments were lowered to within 2 m of the bottom. Numerous water profile measurements were taken, including temperature (°C), salinity, dissolved oxygen (mg/L), average sound velocity (m/s), fluorescence (mg/m<sup>3</sup>), and beam transmission (%). CTD data were archived for further processing at the Beaufort Laboratory. SCS 5 was used to collect specific

information for each fishing and CTD event, including soak time/cast duration as well as start and end latitude, longitude, and depth (m).

#### *Multibeam Sonar Data Collection*

The EM2040 was used by Pisces Survey Technicians to map seafloor habitats during overnight hours when trap and video sampling was not occurring. Two types of mapping occurred: random zig-zag lines to estimate hardbottom or priority areas not previously mapped.

## RESULTS AND DISCUSSION

#### *Camera-Trap Sampling*

A total of 322 stations were sampled with camera-trap gear during PC-23-03 (Table 1). From these traps, fish were collected and worked up for length frequency data. Various reef fish species were further processed for otolith, gonad, and DNA tissue. One trap was lost when the line was cut on the side of the ship.

#### *Environmental Data Collection*

A total of 56 CTD casts (Table 1) associated with trap-video sampling were conducted during the cruise (note that additional CTD casts were conducted overnight for mapping purposes). CTD data will be processed with Seabird SBE Data Processing software (version 7.2), and archived in a database at the NMFS-Beaufort Laboratory for future analysis.

#### *Multibeam Sonar Mapping*

Seafloor mapping occurred during the 8 realized mapping days as well as most evenings during trap-video cruises. A total of 37 lines were mapped out of 87 in total that were expected on this cruise. Four additional priority areas were mapped.

#### *EK-80 Data Collection*

We collected EK-80 data day and night during all four legs, but the device began experiencing problems early in leg 4. It appeared as though interference was occurring, even though all other sonar devices on the ship were secured.

#### *Time Lost*

Leg 1 was reduced by 1 DAS due to a personnel emergency, leg 2 was reduced by 4 DAS due to a bow thruster problem, leg 3 was reduced by 9 DAS due to an engine oil leak, and leg 4 was reduced by 2 DAS due to storms and 1 DAS due to a ship mechanical issue when trying to leave the dock. In total, 32 of 49 DAS were achieved in 2023 (and 17 DAS were lost, 2 DAS lost due to weather and 15 DAS due to ship mechanical or personnel issues).

#### *Acknowledgments*

We thank the NOAA Ship *Pisces* officers and ship's company for their hard work during our cruise.

## CRUISE PARTICIPANTS

### Leg I: August 4-11, 8 DAS

Name	Title	Organization
No scientists on board		

### Leg II: August 17-25, 9 DAS

Name	Title	Organization
Nate Bacheler	FPC	NOAA-NMFS-SEFSC
Christina Schobernd	Video lead	NOAA-NMFS-SEFSC
Zach Gillum	Watch chief	CIMAS
David Hoke	Deck watch	NOAA-NMFS-SEFSC
Derek Bolser	Deck watch	NOAA-NMFS
Brad Teer	Watch chief	CIMAS
Erin Pickett	Deck watch	CIMAS
Walt Rogers	Deck watch	CIMAS

### Leg III: August 28 – 30, 3 DAS

Name	Title	Organization
Zeb Schobernd	FPC	NOAA-NMFS-SEFSC
Matt Damiano	Video lead	CIMAS
Zach Gillum	Watch chief	CIMAS
Matt Vincent	Deck watch	NOAA-NMFS-SEFSC
Cassidy Peterson	Deck watch	NOAA-NMFS-SEFSC
Brad Teer	Watch chief	CIMAS
Kim Johnson	Deck watch	NOAA-NMFS-SEFSC
Neil McNeill	Deck watch	NOAA-NMFS-SEFSC
Joe Contillo	Deck watch	NOAA-NMFS-SEFSC

### Leg IVA part 1: September 11-18, 8 DAS

Name	Title	Organization
Nate Bacheler	FPC	NOAA-NMFS-SEFSC
Zeb Schobernd	Video lead	NOAA-NMFS-SEFSC
Rob Cheshire	Watch chief	NOAA-NMFS-SEFSC
Nick Piscitelli	Deck watch	University of Connecticut
Brad Teer	Watch chief	CIMAS
Ryan Tharp	Deck watch	NC State University
Jenna Charydczak	Deck watch	SCDNR

**Leg IVA part 2:** September 18-22, 4 DAS

Name	Title	Organization
Nate Bacheler	FPC	NOAA-NMFS-SEFSC
Zeb Schobernd	Video lead	NOAA-NMFS-SEFSC
Zach Gillum	Watch chief	CIMAS
Rob Cheshire	Deck watch	NOAA-NMFS-SEFSC
Sally Dowd	Deck watch	University of North Carolina
Brad Teer	Watch chief	CIMAS
Ryan Tharp	Deck watch	NC State University
Jenna Charydczak	Deck watch	SCDNR
Katrina Bernaus	Deck watch	Duke University

**Leg 4B:** September 25-30, 6 DAS

Name	Title	Organization
No scientists on board		

Figure 1: Operating area for PC-23-03 outlined in red.

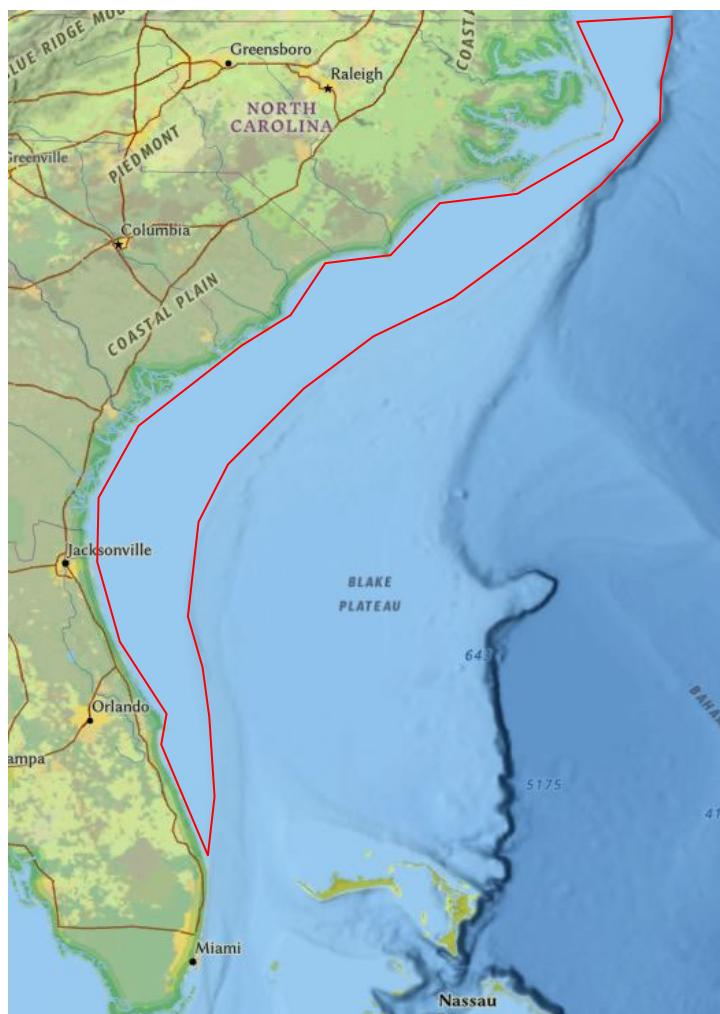

Table 1. Summary of station coordinates, depth (m), date, and time (GMT) for each fishing event (camera-trap, Gear=324) and CTD cast (Gear=298) conducted on the PC-23-03 survey.
