NOAA TECHNICAL MEMORANDA National Weather Service, Western Region Subseries

The National Weather Service (NWS) Westem Region (WR) Subseries provides an informal mediumfor the documentation and quick disserrination of results not appropnate, or not yet reacy, fortormal publication. The series is used to report on work in progress, to describe technical procedures and practices, or to relate progress to a limited audience. These Technical Memoranda will report on investigations devoted primarily to regional and local problems of interest mainly to personnel, and hence will not be widely distributed.

Papers 1 to 25 are in the former series, ESSA Technical Memoranda, Westem Region Technical Memorands (WRTM); papers 24 to 59 are in the former series, ESSA Technical Memoranda, Weather Bureau Technical Memoranda (WBTM). Beginning with 60, the papers are part of the series, NOAA Technical Memoranda NWS. Out-of-print memoranda are not listed.

Papers 2 to 22, except for 5 (revised edition), are available from the National Weather Service Westem Region, Scientific Services Division, 125 South State Street - Rm 1311, Salt Lake City, Utan 84138-1102. Paper 5 (revised edition), and all others beginning with 25 are available from the National Technical Intormation Service, U.S. Department of Commerce, Sills Building, 5285 Port Royal Road, Springfield, Virginia 22161. Prices vary for all paper copies; microfiche are $\$ 3.50$. Order by accession number shown in parentheses at end of each entry.

## ESSA Technical Memoranda (WRTM)

2 Climatological Precipitation Probabilities. Compiled by Lucianne Miller, December 1965.
3 Westem Region Pre- and Post-FP-3 Program, Decernber 1, 1965, to February 20, 1966. Edward D. Diemer, March 1966.

Station Descriptions of Local Effects on Synoptic Weather Pattems. Philip Williams, Jr., April 1966 (Revised November 1967, Oetober 1969). (PB-17800)
8 Interpreting the RAREP. Herbert P. Benner, May 1966 (Revised January 1967).
$\begin{array}{cl}8 & \text { Interpreting the RAREP. Herbert P. Benner, May } 1966 \text { (Revised January } \\ 11 & \text { Some Electrical Processes in the Atmosphere. J. Latham, June } 1966 .\end{array}$
11 Some Electrical Processes in the Atmosphere. J. Latham, June 1966. A Digitalized Summary of Radar Echo
and L. B. Overaas, December 1966.
21 An Objective Aid for Forecasting the End of East Winds in the Columbia Gorge, July through October. D. John Coparanis, April 1967.
22 Derivation of Radar Horizons in Mountainous Terrain. Roger G. Pappas, Apri! 1967.

## ESSA Technical Memoranda, Weather Bureau Technical Memoranda (WBTM)

25 Verification of Óperation Probability of Precipitation Forecasts, April 1966-March 1967. W. W. Dickey, October 1967. (PB-176240)
26 A Study of Winds in the Lake Mead Recreation Area. R. P. Augulis, January 1968. (PB-177830) Weather Extremes. R. J. Schmidi,
Small-Scale Analysis and Prediction. Philip Williams, Jr., May 1968. (PB178425)
30 Numerical Weather Prediction and Synoptic Meteorology. CPT Thomas D. Murphy, USAF, May 1968. (AD 673365)

31 Precipitation Detection Probabilities by Salt Lake ARTC Radars. Robert K. Belesky, July 1968. (PB 179084)

32 Probability Forecasting-A Problem Analysis with Reference to the Portand Fire Weather District. Harold S. Ayer, July 1968. (PB 179289)
36 Temperature Trends in Sacramento-Another Heat Island. Anthony D. Lentini, February 1969. (PB 183055)

## TABLE OF CONTENTS

I. Narrative Geographical and Climatological Summary ..... 1-4
II. Temperature Records
Daily Maximum and Minimum Temperature Extremes ..... 6-17
Highest and Lowest Average Temperatures by Month ..... 18-20
Warmest and Coldest Winter, Spring, Summer, and Fall ..... 21-22
Highest and Lowest Annual Temperatures ..... 23
Average Number of Days Per Month with Maximum Temperatures 80, 85, and 90 Degrees or Higher ..... 23
Average Number of Days Per Month with Minimum Temperatures 40, 32; and 0 Degrees or Lower ..... 24
Freeze and Growing Season Data ..... 24
Greatest Number of Consecutive Days with Maximum Temperatures 85 degrees or Higher ..... 24
Greatest Number of Consecutive Days with Maximum Temperatures 90 degrees or Higher ..... 25
Greatest Number of Consecutive Days with Minimum Temperatures 0 degrees or Lower ..... 25
III. Precipitation Records
Greatest Daily 24-Hour Precipitation (Midnight to Midnight) ..... 27-29
Maximum and Minimum Precipitation by Months ..... 30-31
Wettest and Driest Winter, Spring, Summer, and Fall ..... 32-33
Yearly Precipitation Totals ..... 34
15 Wettest and Driest Precipitation Years ..... 35
Greatest Number of Days with 0.01 Inch and 0.10 Inch or More, with Average Number of Days ..... 36
Greatest Number of Days with 0.25 Inch and 0.50 Inch or More, with Average Number of Days ..... 36
Greatest Number of Consecutive Days with 0.01 Inch and 0.25 Inch or More ..... 37
Greatest Number of Consecutive Days with 0.50 Inch and 0.75 Inch or More ..... 38
Greatest Number of Consecutive Days without Measurable Precipitation ..... 38
Excessive Storms ..... 39
Greatest Daily 24-Hour Snowfall ..... 40-42
Maximum Monthly Snowfalls ..... 43-44
Seasonal Snowfall Totals ..... 45
15 Snowiest and Least Snowiest Seasons ..... 46
Excessive Snowstorms ..... 47
Average Number of Days with Snowfall of 1 Inch or More ..... 48
Average Number of Days with Thunderstorms ..... 48
IV. Miscellaneous Information
Statistics on Sunshine, Cloudiness, and Fog ..... 50
Normal Heating and Cooling Degree Days ..... 51
Normal Daily Maximum, Minimum, and Mean Temperatures ..... 52-64
Sunrise and Sunset Table for Flagstaff, Arizona ..... 65
I. NARRATIVE GEOGRAPHICAL AND CLIMATOLOGICAL SUMMARY

## CLIMATE OF FLAGSTAFF, ARIZONA

Flagstaff is majestically located on a plateau in the center of the largest stand of Ponderosa Pine in the United States, at the base of the San Francisco Peaks (Arizona's highest mountains, 12,633 feet). The plateau, with an average elevation of around 7,000 feet, is the southern edge of the Colorado Plateau and curves from the Grand Canyon southeastward across midArizona and then eastward into New Mexico. Flagstaff is the hub for north-south and east-west travel across northern Arizona, and is the "gateway" to numerous recreational areas in Arizona, including the Grand Canyon.

Flagstaff's elevation of 7,000 feet assures a variety of weather, including cold winters and mild pleasant summers, moderate humidity, and considerable diurnal temperature changes. Only limited farming is carried on because of the shortness of the growing season even though the average precipitation for Flagstaff is 22.91 inches. The average date of the last occurrence of $32^{\circ} \mathrm{F}$ in the spring is June 13 and that of the first $32^{\circ} \mathrm{F}$ temperature in the fall is September 21. However, the summers in Flagstaff are one of its best kept secrets, with an average maximum temperature in July of $82.2^{\circ} \mathrm{F}$, and an alltime record high of $97^{\circ} \mathrm{F}$. On average, only 4 days in the summer have maximum temperatures of $90^{\circ} \mathrm{F}$ or higher. Summer minimum temperatures are cool and refreshing with temperatures often dipping into the 40s, with an occasional night in the 30s.

The moderate summer heat gives way to a cooler, but nonetheless pleasant, fall period with maximum temperatures generally in the 60s, with minimum temperatures falling below freezing. Winter weather typically
begins by November and becomes well entrenched by December, with frequent light to moderate snows and increasingly colder weather. By December, minimum temperatures are generally in the teens; however, afternoon maximum temperatures still average in the 40 s due to the amount of sunshine the station receives. Because of its location with respect to the typical jet stream and high altitude, Flagstaff is one of the 10 most sunny locations for National Weather Service offices in the United States, averaging 78 percent of the possible sunshine throughout the year. Even with all of this winter sunshine, significant snowfall can be expected during the winter with an average snowfall of around 110 inches per year. Between storms, when dry high pressure builds with light winds and fresh snow cover on the ground, minimum temperatures can plummet. The all-time record low for Flagstaff is $-30^{\circ} \mathrm{F}$.

By mid-April, winter weather usually begins to break, and although snow is not uncommon in May, warm spells become more frequent. Snowfall has been reported as late as June. Spring in Flagstaff is typically breezy and dry with little precipitation occurring in May and early June.

There are two distinct periods of precipitation in Flagstaff. The first occurs during the winter months from November through April when the jetstream can be located far enough south to allow Pacific storm systems to move over the state. The other distinct period is classified as the summer rainy season, or "summer monsoon." The monsoon rainy period usually occurs during July and August when most of Arizona is subjected to widespread thunderstorm activity. These
thunderstorms are extremely variable in intensity and location and occur mainly between the hours of 11:00 a.m. and 6:00 p.m.

Prevailing winds at Flagstaff are southerly most of the year. This is due to terrain influences and short-wave weather disturbances moving across the Great Basin region of the West. Winds of damaging force (greater than 60 mph ) are rare, but may occur around some of the mountain locations during the winter and spring months. Additionally, some thunderstorms may produce local wind gusts over 60 mph for short durations.

Since there is no concentration of industry; smoke pollution is almost nonexistent, and the air is remarkably free of contaminants of any kind, although smoke from resident's fireplaces can become a problem on some of the colder nights due to strong radiational inversions that develop. During the winter and spring months, fog occasionally forms due to radiational cooling from snow cover on the ground. However, this fog usually breaks up quickly by morning. In spite of the elevation, periods of low ceilings and limited visibilities are usually of short duration.

## A HISTORY OF WEATHER OBSERVATIONS AT FLAGSTAFF

The first official weather station in Flagstaff was established 9 September 1898. The office was located at the southeast corner of Aspen Avenue and Park Street in a onestory, five-room brick building known as the "Milligan Cottage." The first observer was Miss Elizabeth Renoe, who later married a young attorney who became the first United States Senator from Arizona, Senator Henry Ashurst.

On 15 March 1912, the station was moved to Sitgreaves and Ellery Streets, which was one-half mile southeast of the previous location. The station remained at this location until 29 October 1919. The station was then moved to 602 North Leroux Street.

On 1 June 1943, the weather station was moved to the Federal Post Office Building in downtown Flagstaff. A first-order weather station was then established.

On 12 January 1950, the weather station was moved to the Flagstaff Municipal Airport, six miles south of Flagstaff. The station and the weather service office remained at the airport until June 1994 when the National Weather Service office moved to the Camp Navajo Army Depot in Bellemont, 10 miles west of Flagstaff. From July 1994 to July 1995, the National Weather Service office was temporarily located in the army barracks while a new office was constructed. On 21 July 1995, the office officially moved to its current location on the Camp Navajo Army Depot. An automated weather station (ASOS) remains at the Flagstaff Municipal Airport recording the official observations for Flagstaff. The ASOS was commissioned 1 July 1994.

## SOME HIGHLIGHTS OF THE WEATHER RECORDS IN FLAGSTAFF

Many unusual weather events have taken place in Flagstaff since official weather observations began on 9 September 1898. The following is a brief description of some of the more extreme conditions recorded since then.

The all-time record high temperature for Flagstaff of $97^{\circ} \mathrm{F}$ occurred on 5 July 1973. Skies were clear and winds were generally light westerly, although by afternoon, winds were generally around 10 mph . The early morning temperature of $51^{\circ} \mathrm{F}$ was very close to the normal of $48^{\circ} \mathrm{F}$. The next day, a weak cold front approached the state, keeping the afternoon high temperature at $89^{\circ} \mathrm{F}$.

The all-time record warmest minimum temperature for Flagstaff was broken on back-to-back nights in 2002. On 1 July 2002, the mercury fell to only $67^{\circ} \mathrm{F}$, breaking the previous record of $66^{\circ} \mathrm{F}$ set in 1949. This record was then broken again the next night when the temperature only fell to $68^{\circ} \mathrm{F}$. Oddly enough, the dew point temperatures were only in the lower 40s during this period and there was no extensive cloud cover or winds to keep the temperatures from falling rapidly. However, there was a large fire burning to the east of Flagstaff with some smoke in the area that may have contributed to the record warm overnight temperatures.

The longest consecutive stretch of days with maximum temperatures of $90^{\circ} \mathrm{F}$ or greater in Flagstaff was 11 days. This occurred 21 June through 1 July 1990. The highest temperature reached during this longest stretch of warm weather was $94^{\circ} \mathrm{F}$.

The longest consecutive stretch of days with maximum temperatures of $85^{\circ} \mathrm{F}$ or greater in Flagstaff was 22 days. This occurred 10 June through 1 July 1974.

The maximum number of days in a calender year with temperatures of $90^{\circ} \mathrm{F}$ or greater was 15 set in 1974. Of note, 14 of those days occurred in June. The maximum number of days in a year with temperatures of $85^{\circ} \mathrm{F}$ or greater was 48
days which was also set in the warm summer of 1974. Twenty-one of these days occurred in June of that year.

The coldest temperature ever recorded in Flagstaff was $-30^{\circ} \mathrm{F}$. This was observed on 22 January 1937. The maximum temperature reached that day was $+12^{\circ} \mathrm{F}$, which was a $42^{\circ} \mathrm{F}$ diurnal spread.

The maximum number of consecutive days with minimum temperatures of $0^{\circ} \mathrm{F}$ or lower was eight. This stretch of cold weather occurred from 27 December 1966 through 3 January 1967.

The maximum number of days in a calender year with minimum temperatures of $0^{\circ} \mathrm{F}$ or lower was 23 set in 1932. The maximum number of days in any month with minimum temperatures of $0^{0} \mathrm{~F}$ or lower was 17 set in the extremely cold month of January 1937. The average minimum temperature that month was $-2.9^{\circ} \mathrm{F}$, which was about 18 degrees below normal.

Snowfall in Flagstaff is highly variable as well. The most snowfall ever recorded during the winter season was 210.0 inches in the winter of 1972-1973. At the other extreme, the least snowfall ever recorded at Flagstaff was 11.2 inches during the winter of 1933-1934.

The all-time record for heaviest precipitation during any calender day at Flagstaff was 3.93 inches which was set on 19 February 1993. Interestingly enough, this precipitation all fell in the form of rain, with temperatures remaining in the middle and upper 30s through the entire 24 hours. Another 1.18 inches of precipitation fell the next day; however, temperatures fell during the morning hours, changing the rain to snow, with a
snow accumulation of 3.2 inches by the end of the day.

February 1993 was the wettest month on record, with 10.05 inches of precipitation falling during that period. Additionally, January 1993 was the wettest January on record, with 9.55 inches of precipitation falling. Thus, almost 20 inches of precipitation (or almost the entire normal precipitation for the year for Flagstaff) fell in a 2-month period of time. December 1992 was the second wettest December on record, giving a 3-month total from December 1992 through February 1993 of 27.38 inches, which is by far the wettest 3month period of time in Flagstaff climatological history. Needless to say, this period was known for the magnitude of flooding which occurred across the area.

The most snowfall to occur within a continuous stormy period occurred from 1320 December 1967, when an estimated 84.6 inches of snow fell during this period. Due to the large amount of snowfall that fell, estimates of snowfall were used to calculate the official amount. Unofficially, it is estimated that over 100 inches of snowfall likely fell during this event. By the end of this event, 83 inches of snow lay on the ground, essentially paralyzing the city of Flagstaff and most of northern Arizona for over a week.

The greatest number of consecutive days without measurable precipitation was recorded from 24 September to 31 December 1999, a total of 99 days! The greatest number of consecutive days with measurable precipitation was 17 days set during the period of 20 July through 5 August 1968, when a total of 3.29 inches of precipitation fell.

The most precipitation ever recorded in one calender year at Flagstaff was 36.59 inches, set during 1965. The least precipitation recorded in one calender year at Flagstaff was 9.90 inches, set in 1942. Average annual precipitation for Flagstaff is 22.91 inches.

*Climatological normals from the years 1971-2000.
! Authors' Note: Due to the fact that weather stations were often moved, especially in the early days of the National Weather Service, some records are more representative than others. Even though all temperature and precipitation observations are valid for their particular locations, some locations have proven to be more representative of the general surrounding area than others. In the Flagstaff climatology, there are two periods of observation which appear to not be as representative due to their locations.

The first of these periods is from 15 March 1912 to 29 October 1919 when the observations were taken near the intersection of Sitgreaves and Ellery Streets. This location appears to have been a cold location, with numerous record lows occurring here. When compared to other locations in Arizona during this same period of time, this unusual cold tendency appears to be due to instrument error, or to improper siting of the instruments. You will note many daily, monthly, and yearly cold records occurring during the 1912-1919 period.

The other period of suspect climate information is during the period from 1 June 1943 to 11 January 1950, when the observations were being recorded at the old Flagstaff post office located downtown. Again, due to improper siting of the instruments on the post office roof, the temperatures occurring at this location appear to be unnaturally too warm when compared to surrounding stations. You will note many daily, monthly, and yearly warm records occurring during the 1943-1950 period.

With time, these biased records will be overwritten by new records; however, until that happens, data from these two periods of record should be viewed cautiously with respect to their siting.

* Averages based on climatological normals 1971-2000.
! These years should be viewed with caution due to suspect observations.

AVERAGE NUMBER OF DAYS PER YEAR WITH MAXIMUM TEMPERATURES 80, 85, AND 90 DEGREES OR HIGHER
(1971-2000)

80 Degrees or higher................. 61 days
85 Degrees or higher................. 25 days
90 Degrees or higher................... 4 days

# AVERAGE NUMBER OF DAYS PER YEAR WITH MINIMUM TEMPERATURES 40, 32, AND 0 DEGREES OR LOWER (1971-2000) 

> 40 Degrees or lower................... 265 days 32 Degrees or lower................... 6 days 0 degrees or lower.............

FREEZE AND GROWING SEASON DATA (1899-2000)
The longest growing season on record....................... 147 days in 1940*
The shortest growing season on record............ $1968^{*}$

Average growing season.................................................... 103 days
Average date of the last spring frost ( 32 degrees).................June 13
Average date of the first fall frost ( 32 degrees)..........September 21
Average date of the last spring freeze ( 28 degrees).............May 21
Average date of the first fall freeze ( 28 degrees)...........October 10

* Based on the last day of 32 degrees in the spring and the first days of 32 degrees in the fall.

| Annual | 78\% | 4.5 | 161.8 | 101.7 | 101.6 | 11.5 |

Dense fog is when the visibility is restricted to $1 / 4$ mile or less for at least part of the day. Sky cover is expressed in a range from 0 to 10 , with 0 representing no clouds or obscuring phenomena, and 10 representing a complete sky cover. A further break-down is as follows:

| Clear | $0 / 10$ to $3 / 10$ sky cover |
| :--- | ---: |
| Partly Cloudy | $4 / 10$ to $7 / 10$ sky cover |
| Cloudy | $8 / 10$ to $10 / 10$ sky cover |

A degree day is a measure of the departure of the average daily temperature from 65 degrees. Each degree that the daily temperature is below 65 degrees is equal to one heating degree day. Each degree that the daily temperature is above 65 degrees is equal to one cooling degree day. For example, if the average temperature on a particular day was 55 degrees, the heating degree days would then be $65-55=10$ heating degree days. If the average daily temperature was 72 degrees, the cooling degree days would then be $72-65=7$ cooling degree days. Each day of the month would be calculated in the same fashion, with negative differences counted as zero.

Heating and cooling degree days are useful in the computation of fuel and power consumption and are used by utility companies to determine heating and cooling requirements.

# NORMALS <br> FLAGSTAFF, AZ 

1971 to 2000
Latitude: $\quad 35^{\circ} 08^{\prime} \mathrm{N}$
Longitude: $111^{\circ} 40^{\prime} \mathrm{W}$
Elevation: 7003 Feet

The daily values presented in these tables are not simple means of observed daily values. They are interpolated using a much less variable set of monthly normals calculated using the natural spline function.

In leap years, use the February 28th values for the 29th, and adjust the heating degree monthly totals accordingly.

Daily precipitation normals were also computed using the natural spline function and do not exhibit the typical daily random fluctuations. However, they may be used to compute normal precipitation over time intervals.

This table uses military time, so 1930 actually means $7: 30 \mathrm{p} . \mathrm{m}$.
This table may be used for the next ten years with an error not exceeding two minutes.

Baruch Fischhoff, and Robert L. Winkler, February 1980. (PB80 174576 )
150 Annual Data and Verification Tabulation - Eastern and Central Nont Pacific Tropical Storms and Hurricanes 1979. Emil B. Gunther and Staff, EPHC, April 1980. (PB80 220486)

151 NMC Model Performance in the Northeast Pacific. James E. Overand, PMEL-ERL, April 1980. (PB80 196033)
152 Climate of Salt Lake City, Utah. William J. Alder, Sean T. Buchanan, William Cope (Retired), James A. Cisco, Graig C. Schmict, Alexander R. Smith (Retired), Wilbur E. Figgins (Retired), February 1998 - Seventh Revision (PE98-130727)

153 An Automatic Lighning Detection System in Northem Califoria. James E. Rea and Chris E Fontana, June 1980. (PB80 225592)
154 Regression Equation for the Peak Wind Gust 6 to 12 Hours in Advance at Great Falls During Strong Downslope Wind Stoms. Michael J. Oard, July 1980. (PB91 108367)
155 A Raininess Index for the Arizona Monsoon. John H. Ten Harkel, July 1980. (PB81 106494)
156 The Effects of Terrain Distribution on Surmmer Thunderstorm Activity at Reno, Nevada. Christopher The Effects of Terrain Distribution on
Dean Hill, July 1980. (PB81 102501)
157 An Operational Evaluation of the Scofield/Oliver Technique for Estimating Precipitation Rates from Satellite Imagery. Richard Ochoa, August 1980. (PB81 108227)
158 Hydrology Practicum. Thomas Dietrich, September 1980. (PE81 134033)
159 Tropical Cyelone Effects on Califomia. Amold Court, October 1980. (PBB1 133779)
160 Eastern North Pacific Tropical Cycione Occurrences During Intraseasonal Periods. Preston W. Leftwich and Gail M. Brown, February 1981. (PB81 205494)
161 Solar Radiation as a Sole Source of Energy for Photovoltaics in Las Vegas, Nevada, for July and December. Darryl Randerson, April 1981. (PB81 224503)
162 A Systems Approach to Real-Time Runotf Analysis with a Deterministic Rainfall-Runoff Model. Robert J.C. Bumash and R. Larry Ferral, April 1981. (PB81 224495)
163 AComparison of Two Methods for Forecasting Thunderstorms at Luke Air Force Base, Arizona. LTC Keith R. Cooley, April 1981. (PB81 225393)
164 An Objective Aid tor Forecasting Afternoon Relative Humidity Along the Washington Cascade East Slopes. Robert S. Robinson, April 1981. (PB81 23078)
165 Annual Data and Verification Tabuiation, Eastern North Pacitic Tropical Storms and Hurricanes 1980. Emil B. Gunther and Staff, May 1981. (PB82 230336)
166 Preliminary Estimates of Wind Power Potential at the Nevada Test Site. Howard G. Booth, June 1981. (PB82 127036)

167 ARAP User's Guide. Mark Mathewson, July 1981, Revised September 1981. (PB82 196783)
168 Forecasting the Onset of Coastal Gales Off Washington-Oregon. John R. Zimmerman and William D. Burton, August 1989. (PB82 127051)

169 AStatistical-Dynamical Model for Preciction of Tropical Cyclone Motion in the Eastern North Pacific Ocean. Preston W. Leftwich, Jr., October 1981. (PB82195298)
170 An Enhanced Plotter for Surface Airways Observations. Andrew J. Spry and Jeffrey L. Anderson, October 1981. (PB82 153883)
171 Verification of 72-Hour 500-MB Map-Type Predictions. R.F. Quiring, November 1981. (PB82-158098)
172 Forecasting Heavy Snow at Wenatchee, Washington. James W. Holcornb, December 1981. (PE82-177783)
173 Central San Joaquin Valley Type Maps. Thomas R. Crossan, Decerrber 1981. (PB82 196064)
174 ARAP Test Results. Mark A. Mathewson, December 1981. (PB82 198103)
174 ARAP Test Results. Mark A. Mathewson, December 1981. (PB82 198103)
176 Approximations to the Peak Surface Wind Gusts from Desert Thunderstorms. Darryl Randerson, June 1982. (PB82 253089)
177 Climate of Phoenix, Arizona. Robert J. Schmidli and Austin Jamison, April 1969 (Revised July 1996). (PB96-191614)
178 Annual Data and Verification Tabulation, Eastern North Pacific Tropical Storms and Hurricanes 1982. E.B. Gunther, June 1983. (PB85 106078)

179 Stratified Maximum Temperature Relationships Between Sixteen Zone Stations in Arizona and Respective Key Stations. Ira S. Brenner, June 1983. (PB83 249904)
180 Standard Hydrologic Exchange Format (SHEF) Version I. Fhillip A. Pasteris, Vemon C. Bissel, David G. Bennet, August 1983. (PB85 106052)

181 Quantitative and Spacial Distribution of Winter Precipitation along Utah's Wasatch Front. Lawrence B. Dunn, August 1983. (PB85 106912)

182500 Millibar Sign Frequency Teleconnection Charts * Winter, Lawrence B. Dunn, December 1983. (PB85 106276)
183500 Millibar Sign Frequency Teleconnection Charts - Spring. Lawrence B. Dunn, January 1984. (PB85 111367)
184 Collection and Use of Lightning Strike Data in the Westem U.S. During Summer 1983. Glenn Rasch and Mark Mathewson, February 1984. (PB85 110534)
185500 Millibar Sign Frequency Teleconnection Charts - Summer. Lawrence B. Dunn, March 1984. (PB85 111359)
186 Annual Data and Verification Tabulation eastern North Pacific Tropical Storms and Hurricanes 1983. E.B. Gunther, March 1984. (PB85 109635)

187500 Millibar Sign Frequency Teleconnection Charts - Fall. Lawrence B. Dunn, May 1984. (PB85-110930)
188 The Use and interpretation of Isentropic Analyses. Jeftrey L. Anderson, October 1984. (PB85-132694)
189 Annual Data \& Verification Tabulation Eastem North Pacific Tropical Storms and Hurricanes 1984. E.B. Gunther and R.L. Cross, April 1985. (PB85 1878887AS)

190 Great Salt Lake Effect Snowfali: Some Notes and An Example. David M. Carpenter, October 1985. (PB86 119153/AS)
191 Large Scale Patterns Associated with Major Freeze Episodes in the Agricultural Southwest. Ronald S. Hamilton and Glenn R. Lussky, December 1985. (PB86 144474AS)

192 NWR Voice Synthesis Project: Phase I. Glen W. Sampson, January 1986. (PB86 145604/AS)
193 The MCC - An Overview and Case Study on its Impact in the Westem United States. Glenn R. Lussky, March 1986. (PE86 170651/AS)
194 Annual Data and Verification Tabulation Eastern North Pacific Tropical Storms and Hurricanes 1985. E.B. Gunther and R.L. Cross, March 1986. (PB86 170941/AS)

195 Radid Interpretation Guidelines. Roger G. Pappas, March 1986. (PB86 177680/AS)
196 A Mesoscaie Convective Complex Type Storm over the Desert Southwest. Darryl Randerson, Aprit A Mesoscaie Convective C
1986. (PB86 190998/AS)
197 The Effects of Eastem North Pacific Tropical Cyclones on the Southwestem United States. Walter Smith, August 1986. (PB87 106258AS)
198 Preliminary Lightning Climatology Studies for Idaho. Christopher D. Hill, Carl J. Gorski, and Michael C. Conger, April 1987. (PB87 180196/AS)

199 Heavy Rains and Flooding in Montana: A Case for Slantwise Convection. Gienn R. Lussky, April 1987. (PB87 185229/AS)

200 Annual Data and Verification Tabulation Eastem North Pacific Tropical Storms and Hurricanes 1986. Roger L. Cross and Kenneth B. Mielke, September 1987. (FB88 110895/AS)
201 An Inexpensive Solution for the Mass Distribution of Satellite limages. Glen W. Sampson and George Clark, September 1987. (PB88 114038/AS)
202 Annual Data and Veritication Tabulation Eastem North Pacific Tropical Storms and Hurricanes 1987. Roger L. Cross and Kenneth B. Mieike, September 1988. (PBe8-101935/AS)
203 An Investigation of the 24 September $1988^{\text {"Cold Sector Tomado Outbreak in Northem Califomia. }}$ John F. Monteverdi and Scott A. Braun, October 1988. (PB89 121297/AS)
204 Preliminary Analysis of Cloud-To-Ground Lightning in the Vicinity of the Nevaca Test Site. Carven Scott, November 1988. (PE89 $128649 /$ AS)
205 Forecast Guidelines For Fire Weather and Forecasters - How Nightime Hurnidity Affects Wildiand Fuels. David W. Goens, February 1989. (PB89 162549/AS)
206 A Collection of Papers Related to Heavy Precipitation Forecasting. Westem Region Headquarters, Scientific Services Division. August 1989. (PE89 230833/AS)

Cimate of Billings, Montana. Jeffrey J. Zeltwanger and Mark H. Srobin. November 2000
265 Climate of Sheridan, Wyoming. Jeffrey J. Zeltwanger, Sally Springer, Mark H. Strobin. March 2001
266 Climate of Sacramento, Califomia. Laura Masters-Bevan. December 2000 (7th Revision)
267 Sulphur Mountain Doppler Radar. A Performance Study. Los Angeles/Oxnard WFO. August 2001

## NOAA SCIENTIFIC AND TECHNICAL PUBLICATIONS

The National Oceanic and Atmospheric Administration was established as part of the Department of Commerce on October 3, 1970. The mission responsibilities of NOAA are to assess the socioeconomic impact of natural and technological changes in the environment and to monitor and predict the state of the solid Earth, the oceans and their living resources, the atmosphere, and the space environment of the Earth.

The major components of NOAA regularly produce various types of scientific and technical information in the following kinds of publications.

PROFESSIONAL PAPERS--Important definitive research results, major techniques, and special investigations.

CONTRACT AND GRANT REPORTS--Reports prepared by contractors or grantees under NOAA sponsorship.

ATLAS--Presentation of analyzed data generally in the form of maps showing distribution of rainfall, chemical and physical conditions of oceans and atmosphere, distribution of fishes and marine mammals, ionospheric conditions, etc.

TECHNICAL SERVICE PUBLICATIONS -Reports containing data, observations, instructions, etc. A partial listing includes data serials; prediction and outlook periodicals; technical manuals, training papers, planning reports, and information serials; and miscellaneous technical publications.

TECHNICAL REPORTS--Journal quality with extensive details, mathematical developments, or data listings.

TECHNICAL MEMORANDUMS--Reports of preliminary, partial, or negative research or technology results, interim instructions, and the like.

Information on availability of NOAA publications can be obtained from:
NATIONAL TECHNICAL INFORMATION SERVICE
