Notes:

(1) World Data Centers conduct international exchange of geophysical observations in accordance with the principles set forth by the International Council of Scientific Unions. WDC-A is established in the United States under the auspices of the National Academy of Sciences.
(2) Communications regarding data interchange matters in general and World Data Center A as a whole should be addressed to: World Data Center A, Coordination Office (see address above).
(3) Inquiries and communications concerning data in specific disciplines should be addressed to the appropriate subcenter listed above.

IMPORTANT NOTICE

This is one of a series of data publications printed and distributed by the U. S. Department of Commerce, National Oceanic and Atmospheric Administration, Environmental Data Service, National Climatic Center, Asheville, North Carolina.

In order to expedite response to user requests for these publications, responsibility for processing customers' orders for continuing subscriptions and back issues has been transferred from the Superintendent of Documents, Government Printing Office, Washington, D. C. to the National Climatic Center, Asheville, N. C.

Effective immediately, remittances (checks or money orders) should be made payable to Department of Commerce, NOAA, and payments and orders should be mailed to:

National Climatic Center
Federal Building
Attention: Publications
Asheville, N. C. 28801

All correspondence concerning your publication subscription should be sent to this address. This issue and future issues of the attached publication will carry a subscription price notice containing the above information and address.

SUBSCRIPTION PRICE: $9.00 a year; $2.50 additional for foreign mailing; single copy price varies.* Checks and money orders should be made payable to the Department of Commerce, NOAA. Remittance and correspondence regarding subscriptions should be sent to the National Climatic Center, Federal Building, Asheville, N. C. 28801, Attn: Publications.

*Price this issue $1.50

INTRODUCTION

World Data Centers conduct international exchange of geophysical observations in accordance with the principles set forth by the International Council of Scientific Unions (ICSU). They were established in 1957 by the International IGY Committee (CSAGI) as part of the fundamental international planning for the International Geophysical Year program to collect data from the numerous and widespread IGY observational programs and to make such data readily accessible to interested scientists and scholars for an indefinite period of time. WDC-A was established in the U.S.A.; WDC-B, in the U.S.S.R.; and WDC-C, in Western Europe, Australia and Japan. This new system for exchanging geophysical data was found to be very effective, and the operations of the World Data Centers were extended by ICSU on a continuing basis to other international programs; the WDC's were under the supervision of the Comité International de Géophysique (CIG) for the period 1960 to 1967 and are now supervised by the ICSU Panel on World Data Centers.

The current plans for continued international exchange of solar-terrestrial data through the World Data Centers are set forth in the STP NOTES No. 6 "Guide for International Exchange of Data in Solar-Terrestrial Physics" which was adopted by the Inter-Union Commission on Solar-Terrestrial Physics in 1969. These plans are broadly similar to those adopted under ICSU auspices for the IGY and IQSY.

Functions and Responsibilities of WDC's

The World Data Centers collect data and publications for the following disciplines: Glaciology; Gravimetry; Longitude and Latitude; Meteorology; Oceanography; Rockets and Satellites; Seismology; Solar-Terrestrial Physics disciplines (Solar and Interplanetary Phenomena, Ionospheric Phenomena, Flare-Associated Events, Geomagnetic Phenomena, Aurora, Cosmic Rays, Airglow); Tsunami; UMP disciplines (Recent Movements of the Earth's Crust, Paleomagnetism, Volcanology; Geochemistry, Properties of rocks under high pressure and temperatures, Geothermics, Deep drilling). In planning for the various scientific programs, decisions on data exchange were made by the scientific community through the international scientific unions and committees. In each discipline the specialists themselves determined the nature and form of data exchange, based on their needs as research workers. Thus the type and amount of data in the WDC's differ from discipline to discipline.

The objects of establishing several World Data Centers for collecting observational data were: (1) to insure against loss of data by the catastrophic destruction of a single center, (2) to meet the geographical convenience of, and provide easy communication for, workers in different parts of the world. Each WDC is responsible for: (1) endeavoring to collect a complete set of data in the field or discipline for which it is responsible, (2) safekeeping of the incoming data, (3) correct copying and reproduction of data, maintaining adequate standards of clarity and durability, (4) supplying copies to other WDC's of data not received directly, (5) preparation of catalogues of all data in its charge, (6) making data in the WDC's available to the scientific community. The WDC's conduct their operation at no expense to ICSU or to the ICSU family of unions and committees.

World Data Center A

World Data Center A, for which the National Academy of Sciences through the Geophysics Research Board and its Committee on Data Interchange and Data Centers has over-all responsibility, consists of the WDC-A Coordination Office and eight subcenters at scientific institutions in various parts of the United States. The GRB periodically reviews the activities of WDC-A and has conducted several studies on the effectiveness of the WDC system. As a result of these reviews and studies some of the subcenters of WDC-A have been relocated so that they could more effectively serve the scientific community. Several of the discipline centers of WDC-A dealing with solar-terrestrial physics were consolidated in the WDC-A for Upper Atmosphere Geophysics during the period 1 July 1966 to 1 July 1968. The WDC-A concerned with geomagnetic variations was combined with WDC-A for Upper Atmosphere Geophysics in 1971. Early in 1972 the WDC-A for Upper Atmosphere Geophysics was renamed WDC-A for Solar-Terrestrial Physics to more accurately reflect the scientific data disciplines involved. The WDC-A for Rockets and Satellites was moved from the National Academy of Sciences to a location adjacent to the National Space Science Data Center at NASA Goddard Space Flight Center on 1 January 1969. The World Data Center A for Tsunamis was moved from NOAA-Rockville to NOAA-Honolulu in May 1969. The WDC-A for Glaciology was moved from the American Geographical Society in New York to the U. S. Geological Survey Project Office for Glaciology in Tacoma, Washington on 1 October 1970. The Upper Mantle Project archives were transferred to WDC-A Geomagnetism, Seismology and Gravity in June 1972. The addresses of several subcenters were changed when the National Oceanic and Atmospheric Administration (NOAA) was established in October 1970. The addresses of the WDC-A subcenters and Coordination Office are given inside the front cover. There are very close connections between WDC-A for Solar-Terrestrial Physics, and WDC-A for Rockets and Satellites, which exchange solar-terrestrial geophysical data; if it is more convenient, data may be sent to one WDC-A subcenter through the other one.

The data received by WDC-A have been made available to the scientific community in various ways: (1) reports containing data and results of experiments have been compiled, published and widely distributed; (2) synoptic type data on cards, microfilm or tables are available for use at the subcenters and for loan to scientists; (3) copies of data and reports are provided upon request.

Catalogue of Data

All the data associated with the various disciplines of solar-terrestrial physics received by WDC-A, or known to be available are listed in this catalogue which supersedes all previous WDC-A catalogues for these disciplines. The geographical location of the holdings is specified in each section.

GENERAL EXPLANATORY NOTES

This Catalogue presents the holdings in Solar-Terrestrial Physics at the two World Data Center A subcenters concerned with these disciplines: WDC-A for Solar-Terrestrial Physics, Boulder, Colorado; and WDC-A, Rockets and Satellites, Greenbelt, Md. Their complete mailing addresses are on the inside cover of this Catalogue.

The Catalogue is arranged by the classification scheme (see Table of Contents, p. 2) of the "Guide for International Exchange of Data in Solar-Terrestrial Physics", issued as STP Notes No. 6 under the auspices of the Inter-Union Commission on Solar-Terrestrial Physics*. The main sections are separated by thumb prints. A detailed table of contents heads each section, accompanied by additional explanatory text or maps indicating the location of stations currently reporting, when appropriate.

On the lefthand pages are presented samples of the data and special information on data holdings. The recommended standardized computerized formats are specified. On the facing righthand pages are given holdings at each geographic location under the headings: At Boulder, and At Greenbelt. Under the station lists further information is given when appropriate concerning holdings in Computer Format, Publication, Photographs, or Microfilm.

To present the data in as concise a format as possible for the user, the holdings at Boulder are given by symbols on the catalogue pages which are defined as follows:

A = complete (12 months)
B = moderately complete (6 to 11 months)
C = some data (1 to 5 months)
W = World Days only
Q = data exist but not held at WDC-A; query WDC-A to assist in obtaining these data
P = data presumed to exist but not held at WDC-A; WDC-A will attempt to ascertain availability of these data upon request
S = Program stopped operations (See MASTER STATION LIST for actual date).

Since operating dates are not known for all stations, there can be errors in the "P" entries. "Blanks" in the yearly columns not preceded by an "S" indicate the operating status of the program is not known.

FACILITIES - METHOD OF ORDERING - COST OF COPYING

At Boulder - Solar-Terrestrial Physics

Facilities World Data Center A for Solar-Terrestrial Physics collects and exchanges the types of data annotated in the "Contents", except for those catalog entries shown as being held "At Greenbelt".

Visitors are welcome at the WDC to consult the data collection. Space is available for scientists to work with the data and records on the premises. However, arrangements for such visits should be made in advance since space is limited. Available equipment are desk calculators, microfilm readers and reader-printers and scaling tables for reading ionograms or solar flare patrol film. Special arrangements can be made for the use of an XDS Time-Sharing Computer or the CDC 3800 Computer.

The WDC will, whenever possible, help interested scientists to obtain data not now in the WDC files. This will include searches for the existence of the desired data.

> Scientists are urged to keep the Data Center informed of the observational and experimental programs of their laboratories, whether in progress or planned, in accordance with recommendations in STP Notes No. 6.

Method of Ordering Requests can be made by letters, telephone calls, or visits to the WDC. Orders may be directly from individual scientists or through their institutions or national organizations. In some cases data will be supplied at no charge on a data exchange basis to scientists or institutions which supply data to the WDC. In general, however, data will be supplied at a cost not to exceed the cost of copying and transmittal. If duplicate copies already exist of requested data, scientists may make arrangements to borrow these copies. If asked to reimburse the WDC for the cost of copying data, the requester must send a purchase order or authorizing letter stating:

Type of Data and format of output
Stations involved
Dates and time (be sure to specify whether UT or Local Time desired)

* Copies of STP Notes No. 6 are available from the IUCSTP Secretariat, c/o National Academy of Sciences, 2101 Constitution Ave., N.W., Washington, D. C., U.S.A. 20418, or from World Data Center A for Solar-Terrestrial Physics, NOAA, Boulder, Colorado, U.S.A. 80302.

Parameters required or other specific information
For magnetic tape
1) Specify whether providing blank tape or paying WDC for supplying tape
2) Indicate type of computer on which tape is to be used. WDC can provide BCD tapes at 200, 556, or 800 BPI on 7 track and 800 BPI on 9 track.

The requests should be sent to:
World Data Center A for
Solar-Terrestrial Physics
NOAA
Boulder, Colorado, U.S.A. 80302
with remittances payable in U.S. dollars to:
National Oceanic and Atmospheric Administration
mailed to above address.

Please allow at least three weeks for duplication of data.

Cost of Copying

The costs quoted below are subject to change. Mailing and shipping charges may be in addition to the costs shown.

There is a minimum charge for data copies of $10.00.

Standing orders for data (normally filled on a monthly basis) can be arranged.

Fixed rate charges:

35 mm film copies of bottomside ionograms -- normally supplied in 500 to 1000 ft. lengths	.05 per ft.
Film cutting and splicing charge for selected intervals.	4.00 per interval
35 mm film copies of topside ionograms in 100 ft. lengths	5.00 per 100 ft. roll
35 mm film copies of 35 mm microfilm copies of original recordings or tabulations	5.00 per 100 ft. roll
or, for magnetograms	1.60 per station month
or	5.00 per station year
16 mm film copies of all-sky camera film sprocketed for movie projection	10.00 per 100 ft. roll
16 mm film copies of Hα flare films sprocketed for movie projection	.20 per ft.
35 mm microfilm (camera negative) of data sheets	.15 per frame
Microfiche copy of existing microfiche	.40 per microfiche
Electrostatic copies of data sheets - letter size (8" x 10½")	.20 per sheet
Electrostatic copies reduced from out-size original data sheet to letter size (8" x 10½")	.30 per sheet
Half-size paper copy of full-size magnetogram	.30 each
or	7.50 per station month
Full-size electrostatic copy of magnetograms, data sheets longer than 11", or of strip charts up to 10' lengths	
8½" x 24" (magnetogram size)	.60 per sheet
or	15.00 per station month
8½" x ≤ 10' long	.30 per foot
Electrostatic copy prepared from 35 mm microfilm	
8½" x 11"	.45 per sheet
8½" x 24" (magnetogram size)	.60 per sheet
or, for magnetograms (copyflow process)	10.00 per station month

Duplicates of punched cards on file	10.00 per thousand
Duplicates of interpreted punched cards on file	14.50 per thousand
Negative - 8" x 10" size	6.25 per negative
Glossy prints of existing negative in 8" x 10" size	2.00 per print
Magnetic tapes (new blanks)-7 track	12.00 per reel
Copy of magnetic tape (blank tape supplied)	37.00 per reel

BOOKLETS

1. "Ionospheric Data", monthly, purchased through National Climatic Center, Federal Building, Asheville, NC 28801, Attn: Publications, beginning with the issue for January 1971. Subscription price: $10.00 annually for domestic mailing (airmail $9.60 additional); $12.50 for foreign surface mailing (foreign airmail quoted on request); and single copy price $1.00. Checks or money orders in U.S. currency made payable to the Department of Commerce, NOAA, should accompany the request.

   Back issues of Ionospheric Data available on 35 mm microfilm from WDC-A, 1944 onward . . . . . $5.00 per year

   Also, a limited free distribution on a data exchange basis.

2. "Solar-Geophysical Data", monthly, purchased through National Climatic Center, Federal Building, Asheville, NC 28801, Attn: Publications. Annual subscription price as below, checks or money orders in U.S. Currency made payable to the Department of Commerce, NOAA, should accompany the request.

	Annual	Add for Foreign Mailing	Single copy
Part I and II	$30.50	$8.00	
Part I	$15.50	$4.00	$1.25
Part II	$15.50	$4.00	$1.25

   Back issues are available only at single issue price:

   February 1967 through September 1967 at 45 cents
   October 1967 through June 1969 at 75 cents

   Back issues of Solar-Geophysical Data available on 35 mm microfilm from WDC-A.
   1956 through 1966 . . . . . $ 5.00 per year
   1967 onward . . . . . $10.00 per year

   Also, a limited free distribution on a data exchange basis.

3. World Data Center A for Solar-Terrestrial Physics, UAG Reports series, irregular publication schedule, cover variety of subjects, purchased through National Climatic Center, Federal Building, Asheville, NC 28801, Attn: Publications. Subscription price $9.00 annually for domestic mailing, $11.50 for foreign mailing. Single issue price varies. Checks or money orders in U.S. currency, payable to: Department of Commerce, NOAA, should accompany the request.

   UAG-1 "IQSY Night Airglow Data" by L.L. Smith, F. E. Roach and J. M. McKennan of Aeronomy Laboratory, ESSA Research Laboratories, July 1968, single copy price $1.75.

   UAG-2 "A Reevaluation of Solar Flares, 1964-1966" by Helen W. Dodson and E. Ruth Hedeman of McMath-Hulbert Observatory, The University of Michigan, August 1968, single copy price 30 cents.

   UAG-3 "Observations of Jupiter's Sporadic Radio Emission in the Range 7.6-41 MHz, 6 July 1966 through 8 September 1968" by James W. Warwick and George A. Dulk, Department of Astro-Geophysics, University of Colorado, October 1968, single copy price 30 cents.

UAG-4 "Abbreviated Calendar Record 1966-1967" by J. Virginia Lincoln, Hope I. Leighton and Dorothy K. Kropp of Aeronomy and Space Data Center, Space Disturbances Laboratory, ESSA Research Laboratories, January 1969, single copy price $1.25.

UAG-5 "Data on Solar Event of May 23, 1967 and its Geophysical Effects" compiled by J. Virginia Lincoln, World Data Center A, Upper Atmosphere Geophysics, ESSA, February 1969, single copy price 65 cents.

UAG-6 "International Geophysical Calendars 1957-1969" by A. H. Shapley and J. Virginia Lincoln, ESSA Research Laboratories, March 1969, single copy price 30 cents.

UAG-7 "Observations of the Solar Electron Corona: February 1964-January 1968" by Richard T. Hansen, High Altitude Observatory, Boulder, Colorado and Kamuela, Hawaii, October 1969, single copy price 15 cents.

UAG-8 "Data on Solar-Geophysical Activity October 24-November 6, 1968", Parts 1 and 2, compiled by J. Virginia Lincoln, World Data Center A, Upper Atmosphere Geophysics, ESSA, March 1970, single copy price (includes Parts 1 and 2) $1.75.

UAG-9 "Data on Cosmic Ray Event of November 18, 1968 and Associated Phenomena" compiled by J. Virginia Lincoln, World Data Center A, Upper Atmosphere Geophysics, ESSA, April 1970, single copy price 55 cents.

UAG-10 "Atlas of Ionograms" edited by A. H. Shapley, ESSA Research Laboratories, May 1970, single copy price $1.50.

UAG-11 "Catalogue of Data on Solar-Terrestrial Physics", compiled by J. Virginia Lincoln and H. Patricia Smith, World Data Center A, Upper Atmosphere Geophysics, ESSA, June 1970, single copy price $1.50.

UAG-12 "Solar-Geophysical Activity Associated with the Major Geomagnetic Storm of March 8, 1970", Parts 1, 2 and 3, compiled by J. Virginia Lincoln and Dale B. Bucknam, World Data Center A, Upper Atmosphere Geophysics, NOAA, April 1971, single copy price (includes Parts 1-3) $3.00.

UAG-13 "Data on the Solar Proton Event of November 2, 1969 through the Geomagnetic Storm of November 8-10, 1969", compiled by Dale B. Bucknam and J. Virginia Lincoln, World Data Center A, Upper Atmosphere Geophysics, NOAA, May 1971, single copy price 50 cents.

UAG-14 "An Experimental, Comprehensive Flare Index and Its Derivation for 'Major' Flares, 1955-1969", compiled by Helen W. Dodson and E. Ruth Hedeman, McMath-Hulbert Observatory, The University of Michigan, July 1971, single copy price 30 cents.

UAG-15 "Catalogue of Data on Solar-Terrestrial Physics", prepared by Research Laboratories, NOAA, Boulder, Colorado, July 1971, single copy price $1.50. (Supersedes Report UAG-11, June 1970.)

UAG-16 "Temporal Development of the Geographical Distribution of Auroral Absorption for 30 Substorm Events in each of IQSY (1964-65) and IASY (1969)" by F. T. Berkey, V. M. Driatskiy, K. Henriksen, D. H. Jelly, T. I. Shchuka, A. Theander and J. Yliniemi, September 1971, single copy price 70 cents.

UAG-17 "Ionospheric Drift Velocity Measurements at Jicamarca, Peru (July 1967-March 1970)", by Ben B. Balsley, Aeronomy Laboratory, National Oceanic and Atmospheric Administration, Boulder, Colorado, and Ronald F. Woodman, Jicamarca Radar Observatory, Instituto Geofisico del Perú, Lima, Peru, October 1971, single copy price 35 cents.

UAG-18 "A Study of Polar Cap and Auroral Zone Magnetic Variations", by K. Kawasaki and S. -I. Akasofu, Geophysical Institute, University of Alaska, June 1972, single copy price 20 cents.

UAG-19 "Reevaluation of Solar Flares 1967" by Helen W. Dodson and E. Ruth Hedeman, McMath-Hulbert Observatory, The University of Michigan, and Marta Rovira de Miceli, San Miguel Observatory, Argentina, June 1972, single copy price 15 cents.

4. "Preliminary Report and Forecast of Solar Geophysical Data", weekly, prepared by Space Environment Services Center of the Space Environment Laboratory of ERL-NOAA, available on request to WDC-A.

At Greenbelt

Facilities World Data Center A for Rockets and Satellites, Code 601, Goddard Space Flight Center, Greenbelt, Maryland, U.S.A. 20771, collects and exchanges the following types of information and data:

Reports of sounding rocket launches
Reports of satellite and space probe launchings
Detailed descriptive information on spacecraft experiments
Scientific reports on results of experiments which receive a limited distribution
Data supporting conclusions when not included in the published reports
Precise positional observations, orbital elements, and ephemerides which are of great scientific interest and value.

Original (raw) data or calibrated (reduced or analyzed) data are not normally deposited in the subcenters for rockets and satellites.

The WDC-A subcenter for rockets and satellites will attempt to acquire data from other sources to satisfy requests for scientific study. The subcenter endeavors to maintain contact with space science investigators and, in some cases, may obtain data on an individual request basis directly from an investigator. The subcenter can acquire data from other rocket and satellite subcenters and from U.S. National archives, e.g., the National Space Science Data Center. The subcenter also provides facilities for scientists who wish to participate in on-site study of data. Advance notice of such a visit enables the staff to provide better services to the user.

The World Data Center A for Rockets and Satellites, because of its location contiguous to the National Space Science Data Center, can effectively cooperate with this institution in obtaining reduced and analyzed data to satisfy scientific requests. For details of obtaining data see "Data Catalog of Satellite Experiments" of the National Space Science Data Center, NASA, Goddard Space Flight Center, Greenbelt, Md., U.S.A. 20771.

Method of Ordering The World Data Center A for Rockets and Satellites periodically prepares and distributes catalogues and reports. The publications contain up-to-date listings of information on rockets and satellites and the data and/or reports received during the publication period. The publications are distributed to scientists, institutions, other WDC subcenters, and to the Committee on Space Research (COSPAR).

These catalogues are supplemented from time to time. They include:

1. Summaries of sounding rocket launches (including meteorological research and development launches)
2. Listings of scientists and institutions conducting sounding rocket experiments
3. Launch sites for sounding rockets
4. Listings of artificial earth satellites and space probes (including launch, experiments, and orbit information)
5. Bibliographical listings of reports and reprints (by author and subject).

Cost of Copying Scientists may borrow materials from the subcenter whenever duplicate copies are available. Otherwise, duplicate copies are made for the requester at a cost not to exceed the cost of copying and transmittal.

MASTER STATION LIST

All of the stations listed in the catalogue sections to follow are grouped into a master station list, alphabetically by station name. The scientific program or programs at the station (indicated by letter-number as in Table of Contents), geographic coordinates, geomagnetic coordinates, computed magnetic dip, L-shell value, and opening and closing dates are given. For stations with programs in cosmic rays, the cutoff rigidities and station altitudes are also presented.

For all stations the geographic coordinates were converted by an electronic computer program to give geomagnetic coordinates with the value ϕ = 78.5°N and λ = 291.0°E adopted for the geomagnetic north

pole. Geomagnetic latitude is measured from this pole, and geomagnetic longitude from the geographic meridian extending from the geographic north pole through the geomagnetic north pole.

Another computer program computed the magnetic dip and L-value at 0 km altitude for each station based upon the Jensen and Cain field, epoch November 1966. The cosmic ray cutoff rigidities in Bv were calculated using the 6-degree quiescent magnetic field coefficients by Finch-Leaton for epoch 1955.0.

For each station an attempt is being made to prepare as complete a data information bank as possible. The facts now tabulated are source of data with addresses of both sponsoring institution and station itself, reporting times used, type of equipment operated, observing schedules, form of original records, method of scaling and data reduction, form of data submitted to WDC's, etc.

Special Notes:

For opening and closing dates:
- continuous operation.
--- intermittent operation.
( ) holdings begin or end with these dates, not necessarily dates of program operation.

Preferred name: a single geographic location may appear in the list in two or more places depending upon the name used by the different programs, though an attempt has been made to consolidate all such programs under one preferred name.

Equivalent name: other names used are given in a table which follows the master list.

"Lat" : minus sign represents south latitude.
"Long" : all longitudes are given as east longitudes.
"Altitude" : M = meters
SL = sea level

Note: Since the geographic coordinates have been taken from many different sources, stations are asked to check the entries carefully and to report any inaccuracies promptly to WDC-A, for Solar-Terrestrial Physics, NOAA, Boulder, Colorado, U.S.A., 80302.

A. SOLAR AND INTERPLANETARY PHENOMENA

(other than flare - associated events)

In the catalogue lists for these subsections the stations are arranged by geographic longitude from east to west to permit the user to estimate the adequacy of 24-hour coverage of the various solar phenomena in the WDC-A holdings. For section A.8 "Total Radio Flux Measurements" (and also in C.3 "Solar Radio Events, Fixed Frequency") the data are also listed in order of radio frequency.

For the appropriate sections the availability of data in computerized format is indicated.

Many of these data are found in standard publications. Some of these will be given under the catalogue holdings. Lists of publications can be found in:

Annals of the IQSY, Vol. 1, pp. 308, 309, M.I.T. Press, 1968
AFCRL Geophysics and Space Data Bulletin, Vol. IV, No. 2, Second Quarter 1967
World Data Center A-Upper Atmosphere Geophysics Report UAG-4, Abbreviated Calendar Record 1966-1967, pp. 164-169, December 1968: see p. 4.

KEY TO SYMBOLS

A = 12 Months
B = 6-11 Months
C = 1-5 Months

Q = Data exist but not held at WDC-A; QUERY WDC-A to assist in obtaining data
P = Data PRESUMED to exist but not held at WDC-A; WDC-A will attempt to ascertain availability
S = Program STOPPED operations (see MASTER STATION LIST for actual date)

COMPUTER FORMAT:

1. Mt. Wilson - (one card/sunspot/day) January 1967 to date.
2. Sacramento Peak - (one card/sunspot/day) January 1968 - October 1969.
3. Solar Active Regions (as published in Solar-Geophysical Data) January 1969 to date.

PUBLICATIONS:

1. Solar-Geophysical Data, National Oceanic and Atmospheric Administration, Boulder, Colorado.
2. СОЛНЕЧНЫЕ ДАННЫЕ (Solar Data), USSR Academy of Science.
3. "Photoheliographic Results" Greenwich Royal Observatory Bulletin, (1951-1960 in WDC):

   Positions and areas of sunspots for each day in the year.
   General catalogue of groups of sunspots for the year including CMP, duration, first seen and last seen dates, corrected mean area and mean position.
   Total areas of sunspots and faculae by west and east hemispheres for each day.
   Mean areas and mean heliographic latitude of sunspots and faculae for each solar rotation.

4. "Heliographic Maps of the Photosphere for the Year" by M. Waldmeier, Publikationen der Eidgenössischen Sternwarte Zürich, (1938-1967 in WDC):

   Heliographic maps of the photosphere by solar synodic rotation periods to ±50° latitude; sunspot group at state of its highest evolution and faculae.
   Evolution tables of sunspot-groups day by day by Zürich classification A, B, C, etc.

5. "Sunspot Areas 1907-1970" by R. S. Harrington and M. Miranian, United States Naval Observatory Circular No. 133, U. S. Naval Observatory, Washington, D. C. 20390, June 18, 1971. (Monthly means).

PHOTOGRAPHS:

1. Prints - Upper Van Norman 6/1966 - 4/1969.
2. Prints and drawings - Culgoora 4/1967 to date.
3. Prints - Sacramento Peak 9/1963 - 9/1965.

MOVIES:

"The Sun in Action" - Time-lapse techniques are used to show continuous changes and motions of features on the sun. 16mm B/W Silent print - 400' reel can be purchased or lent.

Solar activity photographed at Big Bear Solar Observatory - 400 ft. 16mm film - Dr. Harold Zirin, California Institute of Technology, Pasadena, California 91109, $40. U.S. payable to California Institute of Technology.

f : moyenne tri-horaire de densité de flux en unité $10^{-22} W.m^{-2}$

v : variabilité en échelle 0, 1, 2, 3.

a : les observations débutent à 06 h.
pas d'observations entre 11h46 et 13h12.

b : pas d'observations entre 08 h. et 11h28.

COMPUTER FORMAT:

1. Ottawa, daily noon flux on magnetic tape, as observed from 2/1947 - 12/1963, adjusted to 1 A.U. from 1/1964 to date.
2. Ottawa, daily noon flux (one card/day), observed and adjusted to 1 A.U., 10/1965 to date.
3. Sagamore Hill noon flux (one card/day), 1/1967 to date.
4. Manila noon flux (one card/day), 12/1967 to date.

PUBLICATIONS:

1. IAU Quarterly Bulletin on Solar Activity - Daily averages for many stations.
2. Solar Activity Chart, WDC-C2 Toyokawa Observatory, Nagoya University, Toyokawa, Japan (available at Boulder). Compiled data on radio bursts at 3, 8 and 10 cm in chart and tabulated form - for 1969 and 1970.
3. Solar Terrestrial Activity Chart, National Committee on Solar Terrestrial Physics, Science Council of Japan. Since IASY, with the help of international cooperation in data supply, the "Solar Terrestrial Activity Chart" (abbreviated to STAC) has been published. This chart illustrates the time-sequence of the activities in 10 cm solar radio flux, solar flare event, solar X-ray and burst, solar proton flux, solar wind velocity and density, interplanetary magnetic field intensity and direction cosmic-ray neutron flux, and geomagnetic field (Dst, Ap, sc and si). The illustration will be given respectively for one-year period, 27-day interval, and 5-day interval. The organization responsible for this service is;

1. Solar-Geophysical Data, NOAA - All of the data listed above under A, B or C entries have been published in Solar-Geophysical Data in graphical and/or tabular form.

EXPERIMENT NAME- GALACTIC AND SOLAR COSMIC RAY NSSDC ID 67-073A-09

ORIGINAL EXPERIMENT INSTITUTION- U OF MINNESOTA

INVESTIGATORS- W.R. WEBBER, U OF NEW HAMPSHIRE , DURHAM, N.H.

DATE LAST USEFUL DATA RECORDED- 08/27/67

EXPERIMENT BRIEF DESCRIPTION
THIS COSMIC-RAY TELESCOPE EXPERIMENT WAS DESIGNED TO MEASURE THE DIFFERENTIAL ENERGY SPECTRA OF PROTONS, HELIUM NUCLEI, AND HEAVIER NUCLEI UP TO Z = 10, WITHIN THE ENERGY RANGE OF 50 TO 2000 MEV PER NUCLEON AND AT A MAXIMUM SAMPLING RATE OF ONCE PER 288 MSEC. THE TELESCOPE CONSISTED OF TWO DETECTORS, A SCINTILLATOR WITH ITS ASSOCIATED PHOTOMULTIPLIER (PM) TUBE AND A SCINTILLATOR AND A CERENKOV ELEMENT SANDWICH WITH BOTH ELEMENTS OPTICALLY COUPLED TO THE SAME PM TUBE. A 70-NANOSEC COINCIDENCE CIRCUIT COUPLED THE TWO DETECTORS TO FORM THE TELESCOPE. PULSES FROM EACH PM TUBE WERE PULSE HEIGHT ANALYZED. SAMPLED PULSE HEIGHTS, THE COINCIDENCE COUNT RATE, AND THE COUNT RATE OF THE FIRST DETECTOR WERE TELEMETERED. THE RESOLUTION OF THE OGO 4 DETECTOR DETERIORATED SHORTLY AFTER LAUNCH, PROBABLY DUE TO PARTIAL SEPARATION OF AN OPTICAL INTERFACE IN ONE ELEMENT OF THE TELESCOPE. THIS RESULTED IN A REDUCED EFFICIENCY FOR DETECTING PROTONS GREATER THAN ABOUT 200 MEV, WITH THE WORST RESOLUTION NEAR THE CERENKOV THRESHOLD OF 32 MEV. APPROXIMATELY 28 DAYS OF DATA WERE OBTAINED.

DATA SET NAME- ORIGINAL REDUCED COSMIC-RAY DATA ON TAPE NSSDC ID 67-073A-09A

AVAILABILITY OF DATA SET- DATA AT NSSDC BEING PROCESSED

TIME SPAN OF DATA- 07/30/67 TO 08/27/67

DATA SET BRIEF DESCRIPTION
THESE REDUCED DATA CONSIST OF TWO EXPERIMENTER-GENERATED, 556-BPI, BINARY MAGNETIC TAPES WRITTEN ON THE CDC 1604 COMPUTER. THE DATA ON THE TAPES ARE ORDERED BY ORBIT PASS, AS INDICATED BY THE MAXIMUM VALUE OF THE MCILWAIN L PARAMETER. THE FIRST TAPE BEGINS ON JULY 30, 1967, AT 0204 UT AND ENDS ON AUGUST 14, 1967, AT 0150 UT. THE SECOND TAPE BEGINS ON AUGUST 14, 1967, AT 0150 UT AND ENDS ON AUGUST 27, 1967, AT 0307 UT. THE DATA CONSIST OF 37-SEC AVERAGED TELESCOPE RATES AND 18-SEC AVERAGED SINGLES RATES. THE TAPE CONTAINS NINE-BIT WORD TELESCOPE RATES, NINE-BIT WORD SINGLES RATES, TIME (UT), ALTITUDE, LATITUDE, LONGITUDE, MCILWAIN L, AND MAGNETIC FIELD.

DATA SET NAME- ORIGINAL SINGLES AND TELESCOPE RATE PLOTS ON MICROFILM NSSDC ID 67-073A-09B

AVAILABILITY OF DATA SET- DATA AT NSSDC BEING PROCESSED

TIME SPAN OF DATA- 07/30/67 TO 08/27/67

DATA SET BRIEF DESCRIPTION
THESE DATA CONSIST OF ONE REEL OF 16-MM MICROFILM. BOTH THE SINGLES COUNT RATES AND THE TELESCOPE RATES ARE PLOTTED ON THE SAME SCALE AS A FUNCTION OF TIME. (THE TELESCOPE RATES ARE SCALED BY A FACTOR OF 100.) THE VERTICAL SCALE IS LOGARITHMIC COUNTS PER SEC WHILE THE HORIZONTAL SCALE IS LINEAR UT FOR ONE ORBIT PERIOD. IN ADDITION TO THE TIME SCALE, MCILWAIN L VALUES, ALTITUDE, AND LATITUDE ARE ALSO INDICATED. THE DATA PLOTTED ARE FOR THE SAME PERIOD COVERED BY THE COSMIC-RAY DATA TAPES IN DATA SET 67-073A-09A.

B. IONOSPHERIC PHENOMENA

(other than flare - associated events)

The map shows all the stations that are currently submitting data. With the exception of the topside soundings in each section of the catalogue, the stations are arranged by geographic latitude in descending order north to south. For Section B.1 in addition to the summary of data from 1957 to date, there are listings by the year from 1969 through 1972 of the daily hourly values, f-plots and ionograms to assist the user in readily determining the network available in any given year. The data on magnetic tape are indicated in a separate section. The station names and two-letter indicators are taken from "List of Ionospheric Vertical Incidence Sounding Stations with Recommended Names and Identification" by Piggott and Shapley published in IQSY Notes No. 11, March 1965, pp. 34-41. This list was adopted for the identification of station data and for other purposes by the Working Group for Ionosphere, of the III IQSY Assembly held in Madrid, March 1965.

KEY TO SYMBOLS

A = 12 Months
B = 6-11 Months
C = 1-5 Months
W = World Days Only
+ = Ionograms and f-plots only, for some years

Q = Data exist but not held at WDC-A; QUERY WDC-A to assit in obtaining data
P = Data PRESUMED to exist but not held at WDC-A; WDC-A will attempt to ascertain availability
S = Program STOPPED operations (see MASTER STATION LIST for actual date)

X = Much of these data are held on microfilm up through about 1967.
Y = Data are usually received on microfilm only.
Z = In addition to the tabulations, some of these data are also available on microfiche.

B.1

Hourly Values - these are monthly tables of hourly values and monthly medians normally for the following parameters: foF2, foF1, foE, foEs, fbEs, fmin, fxI, dfS, h'F, h'Es, h'E, M(3000)F2 or MUF(3000)F2, Es types. On the average there are 12 sheets of data per month. Most of the data have been microfilmed on 35 mm film. One 100 foot roll will contain several years of data for one station at a cost of $5.00, e.g., Huancayo for 1957 - 1964 is on one roll. Electrostatic copies are reduced from out-size single characteristic monthly daily-hourly original sheets to letter size at 30¢ per sheet. For the letter size daily sheets of all characteristics, electrostatic copies are 20¢ per sheet.

KEY TO SYMBOLS

A = 12 Months
B = 6-11 Months
C = 1-5 Months
W = World Days Only
\+ = Ionograms and f-plots only, for some years

Q = Data exist but not held at WDC-A; QUERY WDC-A to assist in obtaining data
P = Data PRESUMED to exist but not held at WDC-A; WDC-A will attempt to ascertain availability
S = Program STOPPED operations (see MASTER STATION LIST for actual date)

X = Much of these data are held on microfilm up through about 1967.
Y = Data are usually received on microfilm only.
Z = In addition to the tabulations, some of these data are also available on microfiche.

B.1

Ionograms - the original sounding record, usually on 35 mm film. Normally, soundings are taken quarter-hourly, and more frequently during Regular World Days and Alerts. The monthly length of film is 900 to 3000 feet depending upon station. Film copies are prepared at a cost of $.05 per foot. If cutting and subsequent splicing of the film is required in order to copy short lengths, there will be an additional charge of $4.00 per interval.

Oct.	27 - Nov. 6		
		1969	
Mar.	21-26		Nov. 2
		1970	
Mar.	6-10		

Special World Intervals & Retrospective World Intervals have been designated through the auspices of the World Days Program, first under the International Geophysical Year Committee and now under the International Ursigram and World Days Service.

B.1 IONOSPHERE VERTICAL SOUNDINGS

AT BOULDER

1969

⑭ Regular World Day (RWD)

⑬ Priority Regular World Day (PRWD)

◇16 Quarterly World Day (QWD) also a PRWD and RGD

△12 Regular Geophysical Day (RGD)

[5] Day of Solar Eclipse

[6 7 World Geophysical Interval (WGI)

[2 Day with unusual meteor shower activity, Northern Hemisphere

3] Day with unusual meteor shower activity, Southern Hemisphere

* Micropulsation Interval Day

All of the Geophysical Calendars presenting the Regular World Days used for data submission are available in World Data Center A - Upper Atmosphere Geophysics Report UAG-6, "International Geophysical Calendars 1957-1969", March 1969.

KEY TO SYMBOLS

A = 12 Months
B = 6-11 Months
C = 1-5 Months
W = World Days Only
\+ = Ionograms and f-plots only, for some years

Q = Data exist but not held at WDC-A; QUERY WDC-A to assit in obtaining data
P = Data PRESUMED to exist but not held at WDC-A; WDC-A will attempt to ascertain availability
S = Program STOPPED operations (see MASTER STATION LIST for actual date)

M O V I E S:

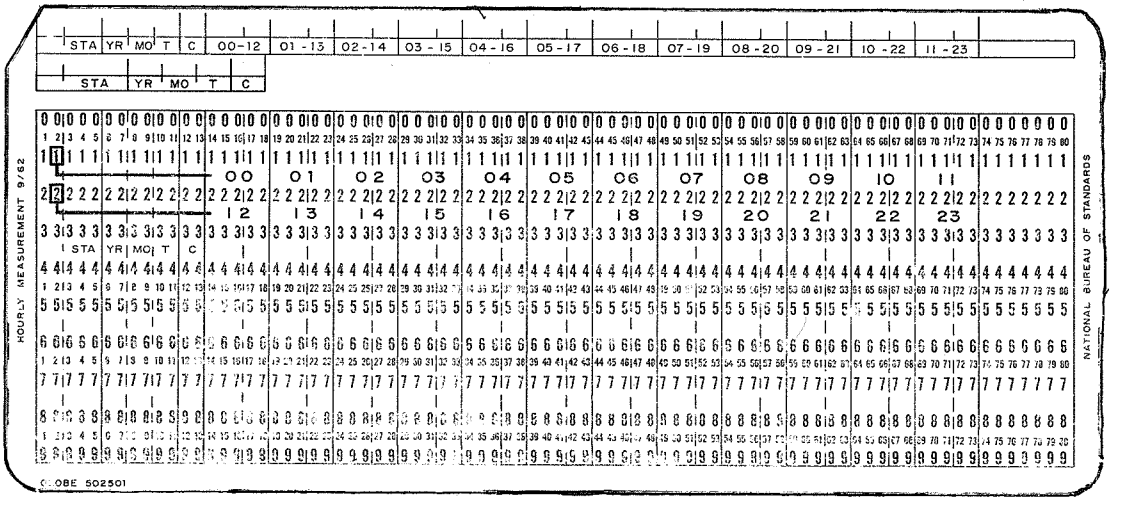
1. A Large-Scale Ionospheric Disturbance of Short Duration, by Vaughn Agy, NOAA Research Lab., 16 mm color movie film with sound, $10.00 minimum charge for loan.
2. Polar Blackouts During the IGY, by Vaughn Agy, NOAA Research Lab., 16 mm color movie with sound, $10.00 minimum charge for loan.

B.1

Ionospheric Phenomena in Computerized Format

A considerable amount of vertical soundings daily hourly values are now in machine readable format in WDC-A. The punched card format is given below for convenience of the user.

CARD COLUMN	DESCRIPTION	REMARKS
1 - 2	Type Card	Column 1 one punch - Ionospheric Data 2 one punch - Hours 00 thru 11 2 two punch - Hours 12 thru 23
3 - 5	Station Code	See section B.1
6 - 11	Date code	Year - Month - Day
12 - 13	Characteristic code	See table below
14 - 73	Hourly Measurements	Divided into five columns per hour
		First three columns - hourly reading
		fourth column - qualifying symbol
		fifth column - descriptive symbol
74 - 80	Blank	



In many cases the punched card images have been written on magnetic tapes having the following characteristics:

556 BPI (Bits-Per-Inch); BCD Binary-Coded-Decimal) mode; Even Parity, 7 track.

In other cases the data remain on punched cards.

During this next year the WDC-A will be editing these magnetic tapes for missing data. Therefore, the WDC-A should be contacted directly and the information as to the availability of the specific data will be determined.

The cost of obtaining this data from magnetic tape will vary considerably depending upon whether information is requested by all stations for a given time period or by specific station. Requests for copies of punched cards will vary depending on whether the cards are to be interpreted to column 80 or column 60, etc.

Cont'd.

Note: Computer identification code numbers for new stations will be furnished upon request to World Data Center A for Solar-Terrestrial Physics. WDC-A has been asked to provide this service by the Ionospheric Network Advisory Group.

Note: In the last column of the computer code:

O = letter "oh" 0 = number "zero"

B.1

Ionospheric Electron Density

Composites of electron density (hourly median electron density values obtained by composite method); hourly height profiles of electron density (or plasma frequency); or hourly values of electron density with height; or hourly values of height for constant electron densities; including values of special profile parameters.

Special profile parameters

The parameters hc and qc are estimates of the real height and characteristic thickness, respectively, of the F2 layer peak.* These are described in the URSI Handbook of Ionogram Interpretation and Reduction (Piggott and Rawer, 1961), to be reprinted as a World Data Center A for Solar-Terrestrial Physics, UAG Report.

* As an alternative to hc (or h max), the real height of 95% of foF2, designated h(9.95) is given by some of the tabulations.

A special issue of "Radio Science", Volume 2 (new Series), No. 10, October 1967, was devoted to the "Analysis of Ionograms for Electron Density Profiles".

Electron density data may be available in one of two formats, and generally in both from March 1962 onwards:

FORMAT NO. 1 gives electron density at fixed 10 km intervals between the highest and lowest heights obtained by the calculation. Two sheets of listing are required per station month at a cost of $.60 per sheet. Listings may be ordered at $1.20 per month, or $10.00 per year, per station.

LOC. ZONE TIME Q	COMPOSITE KM	ELECTRON DENSITY 00	10	20	30	40	50	STATION WP 60	70	80	90	SCAT	HMIN	HMAX	SHMAX

	300	245	255	261	261	261							155	325	193

FORMAT NO. 2 gives true height, H, at selected $\log_{10} f_N$ between fmin and foF2, Z* $\left(\frac{dH}{d\log(f_N^2)}\right)$ Z** $\left(\frac{d^2H}{d(\log f_N^2)^2}\right)$, the integral from hmin to H and the electron density at H.

Twenty-four or more listing sheets are required per month per station. Listings may be purchased at about $10.00 per month per station.

Note: Wallops Island electron density profiles for the March 1970 eclipse have been calculated for 0900 - 1715 EST (see Table 1) March 6 and 7, 1970, along with Monthly median electron density profiles for March, 1970. These data are contained on 118 sheets which can be copied for a cost of $29.50. Electron density profiles for other eclipses are also available for comparison: Aitutaki (19S 160E) for May 1965, and Rio Grande (32S 308E) for November 1966.

KEY TO SYMBOLS

A = 12 Months
B = 6-11 Months
C = 1-5 Months
W = World Days Only

Q = Data exist but not held at WDC-A; QUERY WDC-A to assit in obtaining data
P = Data PRESUMED to exist but not held at WDC-A; WDC-A will attempt to ascertain availability
S = Program STOPPED operations (see MASTER STATION LIST for actual date)

Swept-Frequency Topside Sounder. Launched September, 1962 and still in operation. Data are being received on a continuing basis. Ionograms are on 35 mm film in 100 foot rolls. There are approximately 5000 rolls available from the above telemetry stations (dates are not necessarily inclusive for each station).

PUBLICATIONS:

1. Alosyn Data, Defence Research Telecommunications Establishment, Ottawa - Alouette 1 topside sounder synoptic data which consist of tabulations of selected ionospheric parameters from the ionograms. The parameters are listed in the order in which the ionograms were recorded, one tabulation row for each ionogram. The parameters are compiled for all sounder data recorded during the month at the following stations:

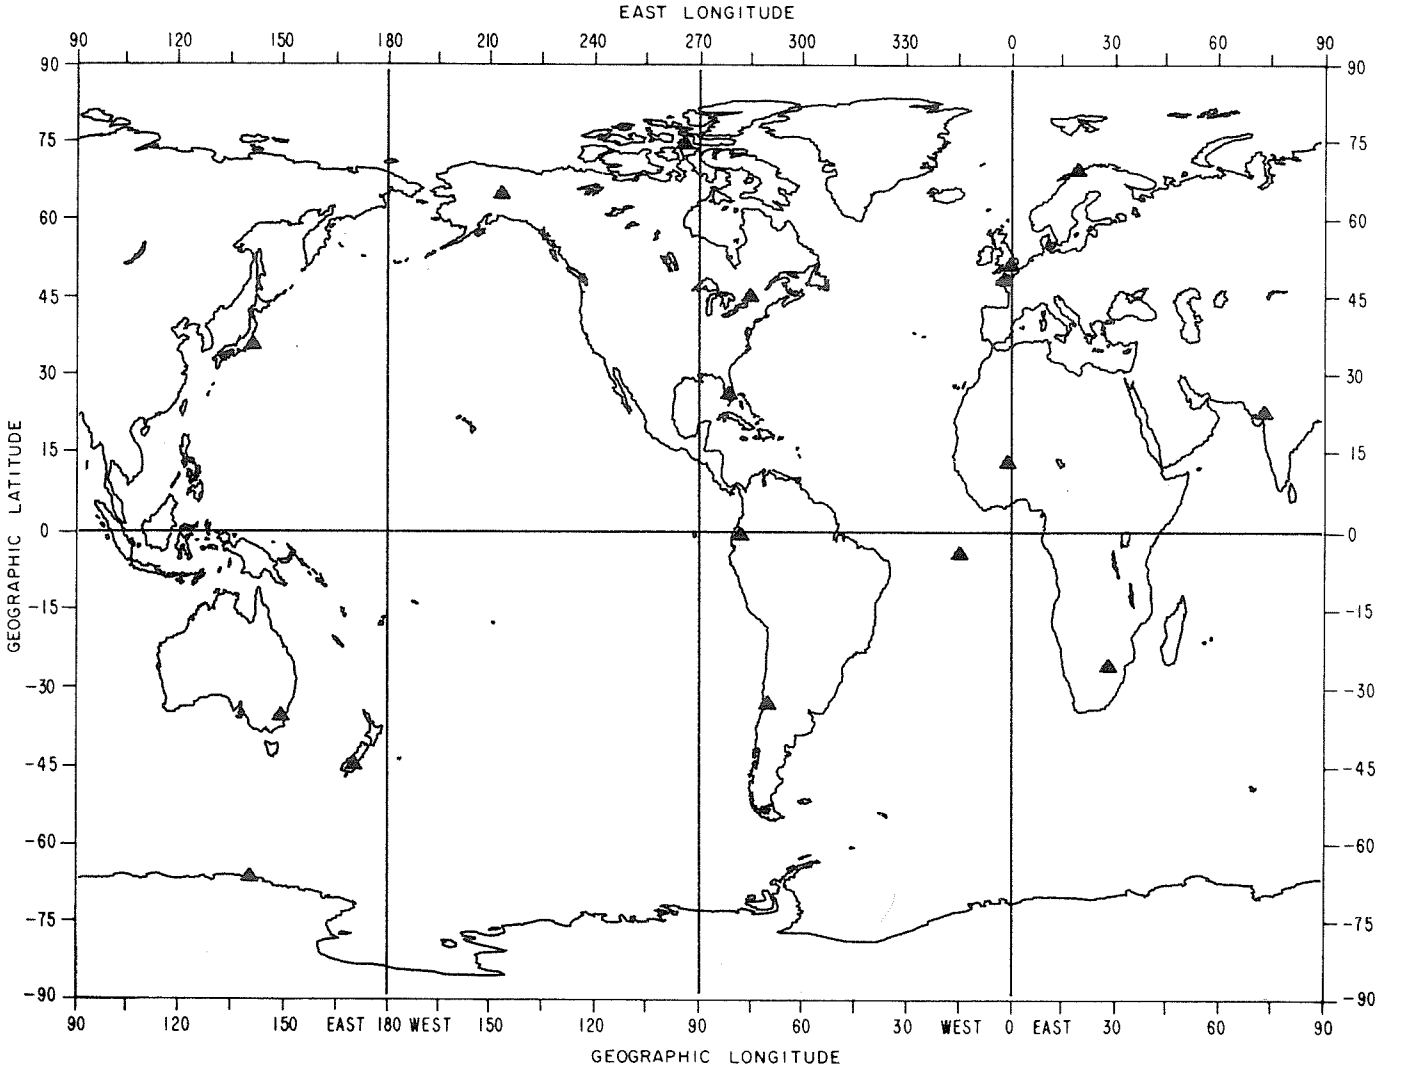
Antofagasta, Chile	Resolute Bay, N.W.T., Canada
College, Alaska, U.S.A.	Santiago, Chile
East Grand Forks, Minn., U.S.A.	South Atlantic (Port Stanley), Falkland Is.
Fort Myers, Florida, U.S.A.	South Point, Hawaii, U.S.A.
Ottawa, Ont., Canada	St. John's, Nfld., Canada
Prince Albert, Sask., Canada	Winkfield, England
Quito, Ecuador	Woomera, Australia

The data are tabulated covering the period of September 29, 1962 to Nov. 30, 1968 and include:

1. Time of observation (universal and local).
2. Latitude, longitude, and height of the satellite.
3. Solar zenith angle and magnetic dip angle at the satellite.
4. Gyrofrequency and plasma frequency at the satellite.
5. Observed extraordinary wave frequency and its accuracy.
6. Quality of the reflection trace at the satellite.
7. Observed ordinary and extraordinary wave penetration frequencies of the F2 layer.
8. Maximum frequency of observation of sporadic E.
9. Strength of signal returned from the earth (strong, weak, no echoes).
10. Three-hourly magnetic Kp index.

B.2

TOPSIDE – VERTICAL INCIDENCE SOUNDINGS TELEMETRY STATIONS 1972



Ionograms from Alouette 1, Alouette 2, Explorer 20 and ISIS 1 Satellites are available. Time charts providing a graphical indication of the duration of Alouette 1 operations can be furnished on request. Some reduced data are available. The map shows all the telemetry stations currently reporting. The data summaries are in alphabetical order. 35 mm film copies of ionograms available at $5.00 per roll, when ordered through Boulder.

PUBLICATIONS: (continued)

2. Electron Density vs. Real Height, Department of Communications, Ottawa - Sept. 29, 1962 - July 27, 1968.
3. Electron Densities and Scale Heights in the Topside Ionosphere: Alouette 1 Observations in Midlatitudes, by Thomas, Rycroft and Colin, NASA, May 1, 1963 - Jan. 28, 1964.
4. Electron Densities and Scale Heights in the Topside Ionosphere: Alouette 1 Observations Over The American Continents, by Chan, Colin, and Thomas, NASA, Mar. 1, 1963 - Oct. 31, 1963.
5. Electron Densities and Scale Heights in the Topside Ionosphere: Alouette 1 Observations Recorded at Hawaii, by Colin and Chan, NASA, Nov. 7, 1962 - Nov. 30, 1963.

COMPUTER FORMAT:

1. Electron density profiles for selected Alouette 1 ionograms reduced by ISIS experimenters covering period Sept. 29, 1962 - June 19, 1965.

AT BOULDER

EXPLORER 20 - 1964 51A

Fixed Frequency Topside Sounder (1.50, 2.00, 2.85, 3.72, 5.47 and 7.22 MHz) Launched August 1964 - completed December 30, 1965: a total of 907 rolls of 35 mm film covers this experiment. The film is organized by orbit. Each orbit includes ionograms from all telemetry stations which took data for that orbit, along with the orbital information. One 100 foot roll may contain 1-10 orbits, depending on the number of stations telemetering, copies $5.00 per roll.

Absorption--Method A2 (Riometer)

Method A2 (Riometer) data consist of monthly tables of values of absorption (in dB) occurring at the hours obtained by the cosmic-noise technique (riometer). For selected stations the original strip charts or microfilm of the strip chart recordings are held.

ABSORPTION

A2 (RIOMETER)

Ionospheric Absorption of 27.6 Mc/s Cosmic Noise

Maximum Absorption During Each Hour, in Tenths of Decibels

(Time in Tenths of Hours)

April 1964 — Time in UT — Observatory: Kiruna

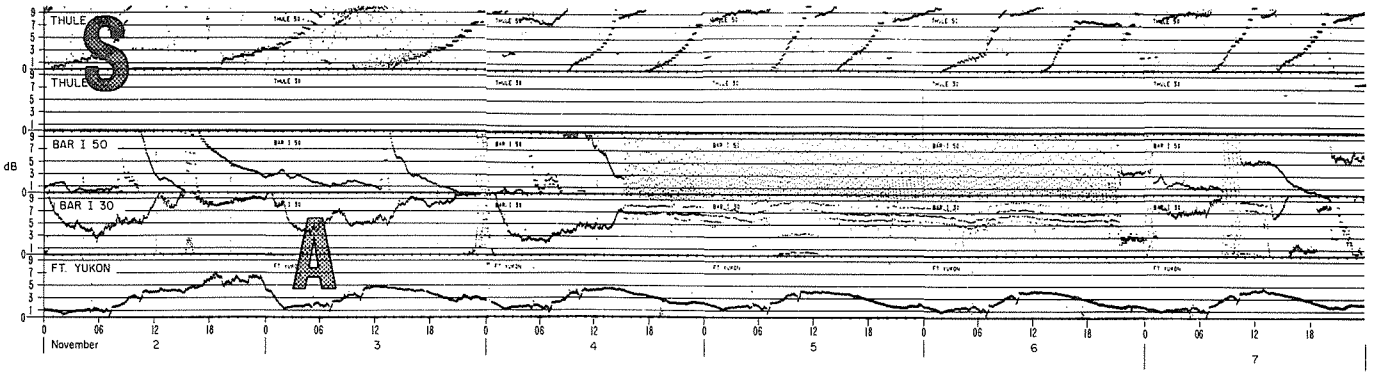
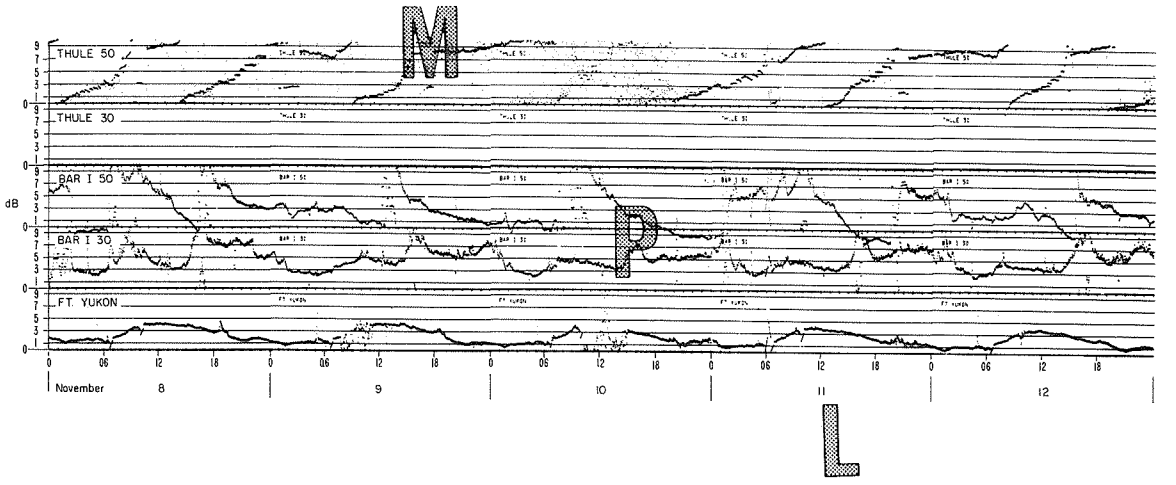
RIOMETER DATA FROM HIGH LATITUDE STATIONS

November 2-12, 1969





These data are recorded on magnetic tape. A computer program converts the data to units and produces this microfilm output showing the stations on the same time scale.

B.9

Method A3 (CW Field-Strength) data consist of monthly tables of hourly or half-hourly values of absorption obtained by measurement of the field strength of sky-wave signals at either short distance or at oblique incidence on suitable frequencies. Some unscaled strip charts, used primarily for relative field-strength for evidence of sudden ionospheric disturbances, are also available. See C.6, SWF.

B.10

Drift measurements are of four methods:

D1 - intercomparison of fading signals at three or more antennas spaced a few wavelengths apart

D2 - radio observations on drifting meteor trails

D3 - radio-star scintillations with three or more antennas spaced many wavelengths apart

D4 - observations of characteristic reflection features at widely spaced sites

[D5 - chemical releases from rockets] (cf COSPAR Information Bulletin No. 45, p. 14, Decision 20, August 1968)

IONOSPHERIC SCINTILLATIONS FROM SATELLITE BEACONS

In the polar regions there often occur columns of enhanced ionization aligned with the earth's magnetic field, known as field aligned irregularities. These irregularities of the ionosphere occur in association with the aurora and other high-latitude phenomena. Owing to variations in refractive index and to multipath effects produced by these irregularities, signals propagating through the ionosphere during times when such irregularities are present suffer perturbations which have characteristics similar to "noise". These perturbations have been studied extensively over the past decade by radio-astronomy techniques and are known as radio-star scintillations. Since they are related to the aurora, the occurrence statistics are similar to that of the aurora: the diurnal maximum occurs near magnetic midnight; the day-to-day fluctuations are similar; seasonal variations maximize near equinoxes; and they are more frequent during solar maximum periods.

During the past several years they have been noted to affect signals from satellites in the polar regions. On such signals they produce an effect very similar to a noise-enhancement. The data signals will sometimes be nearly unusable and command functions from the ground to the spacecraft will sometimes become scrambled. These effects are common in the 100 MHz to 400 MHz region. Such effects diminish according to the inverse square of the frequency. Thus recent spacecraft utilize frequencies in the range of 1700 MHz. Similar irregularities occur also in the equatorial regions and are observed during acquisition of satellite signals at stations located within about ± 10° from the geomagnetic equator.

The scintillation signals as received during satellite acquisition may provide a means of studying such scintillations in addition to the usual radio astronomical methods. Further, such studies may help in design of spacecraft telemetry and in determining best locations for satellite data acquisition stations. Thus the WDC will attempt to preserve records for certain of the existing stations in the polar and equatorial regions.

Recordings held are the strip charts from some of the telemetry sites for selected periods.

12. The Statistics of Satellite Scintillations at a Sub-Auroral Latitude. J. Geophys. Res., Vol. 69, 1964.

IONOSPHERIC BACK-AND FORWARD-SCATTER

Little data in WDC-A. Stations are invited to report their experimental arrangement, the outline of the observing schedule, and the data reduction and analysis made or intended. The information will be catalogued and inquiries referred to the experimenter.

F_{am} = median value of effective antenna noise in dB above kT_0b

D_u = ratio of upper decile to median in dB.

D_ℓ = ratio of median to lower decile in dB.

V_{dm} = median deviation of average voltage in dB below mean power.

L_{dm} = median deviation of average logarithm in dB below mean power.

KEY TO SYMBOLS

A = 12 Months
B = 6-11 Months
C = 1-5 Months

Q = Data exist but not held at WDC-A; QUERY WDC-A to assist in obtaining data
P = Data PRESUMED to exist but not held at WDC-A; WDC-A will attempt to ascertain availability
S = Program STOPPED operations (see MASTER STATION LIST for actual date)

COMPUTER FORMAT:

1. Flare reports - from each observatory reporting - July 1955 to date
2. Hours of flare patrol - most observatories - Jan. 1965 to date
3. Grouped flares 1955-1964; Feb. 1967 to date as published in Solar-Geophysical Data, NOAA.
4. Event log - Preliminary reports of flare-associated events in time sequence. Includes flares, radio emission bursts, SID, x-ray bursts. (listing only)

PUBLICATIONS:

1. Solar-Geophysical Data, NOAA, publishes all of the individual station reports together with a grouped report. The flares are divided into "confirmed" and "unconfirmed" events.
2. I.A.U. Quarterly Bulletin on Solar Activity, Zürich, These reports included all individual station reports through Dec. 1962, and since then have included only a flare event list -- now limited to those that are "confirmed".
3. IGY Solar Activity Report Series, No. 12 (microfilm only), Nos. 14, 15, 17, 18, 21, 25, 29, 33, 35.

C.2 C.2 SOLAR MAGNETIC FIELD IN ACTIVE REGIONS AND THEIR SHORT-TERM CHANGES

No data at Boulder.

Stations known to be capable of such measurements are Meudon, Culgoora, Lockheed, Kitt Peak, Climax, Sacramento Peak and San Fernando Observatory.

C.3

The data consist of tabulations and for a few selected events, copies of the strip chart records. The map indicates the stations currently reporting.

COMPUTER FORMAT:

1. All types of SIDs summarized 10/1955 to date, Single station reports - 8/1968 to date.

PUBLICATIONS:

1. Solar-Geophysical Data, NOAA, single line entries by type of SID until data for 12/1969 when combined into one line per SID event.
2. IGY Solar Activity Report Series No. 24, World Data Center A - SIDs from 7/1957 - 12/1959.

ORIGINAL RECORDINGS:

Selected SWF recordings are available. For the most part these are for the stations given in Section B9 of this catalogue.

MICROFILM:

Original recordings of SCNA-SEA from Rome, Manila, Hawaii, Boulder and McMath-Hulbert grouped on 35 mm microfilm. Monthly strips $3.00 per month.

MISCELLANY:

1. SPA and SES available from Boulder, Table Mountain site.
2. Sonograms of SFD available from Boulder.

Note: See also B.8 Absorption - Method A.2 (Riometer) for data recordings on strip charts.

The graphs of the Explorer 41 data indicate outstanding events of more than one hour's duration.

C.11

C.11 SOLAR PROTONS AND ELECTRONS - OTHER TYPES

AT BOULDER

"Blackout" of HF communications over polar circuits can sometimes be interpreted as polar cap absorption events, e.g. HF field strength recordings of Thule transmissions received at Anchorage and Tokyo are suitable for such analysis.

WDC-A holds some Thule-Anchorage data.

C.12

C.12 SOLAR, IONOSPHERIC OR AERONOMICAL ROCKETS

AT GREENBELT

To identify rockets launched during events, see summary listings in World Data Center A Rockets and Satellites Catalogue, NASA, Greenbelt, Maryland.

Rocket launching sites are listed in Section B.5.

C.13

Neutron or super neutron monitors record ground level increases occurring at the time of great solar proton events.

C.13 COSMIC RAY GROUND LEVEL INCREASES

See station lists in Sections F.1 and F.2 for stations recording at the time of the outstanding ground level increases.

OUTSTANDING GROUND LEVEL INCREASES

1942	Feb	28	1960	Nov	12
1946	July	25	1960	Nov	15
1949	Nov	19	1960	Nov	20
1956	Feb	23	1961	July	18
1956	Aug	31	1961	July	20
1959	July	16	*1967	Jan	28
1960	May	04	*1968	Nov	18
1960	Sept	03	*1969	Feb	25
			*1971	Jan	24-25
			*1971	Sep	1-2

* WDC-A holds several graphs of the events marked by the asterisks.

P U B L I C A T I O N S:

1. World Data Center A - Upper Atmosphere Geophysics Report UAG-9 - Data on Cosmic Ray Event of Nov. 18, 1968 and Associated Phenomena.
2. World Data Center A for Solar-Terrestrial Physics Report UAG-21 - Data on Solar-Geophysical Activity Associated with the Major Ground Level Cosmic Ray Events of 24 January and 1 September 1971.

D. GEOMAGNETIC PHENOMENA

The map below shows all the observatories currently submitting geomagnetic data to the World Data Center A. The catalogue listings are arranged by geographic latitude from north to south. They are included alphabetically in the Master Station List pp. 6 to 30.

Because of the various forms in which geomagnetic data are received (microfilm, publications, photostats, etc.) not all types of reproductions are available for each kind of record. For example, photostats and microfilm copies of selected records can only be furnished when the original or paper copies are available. Most of the data are on microfilm. The type of copy furnished would depend on the source material. For information concerning the types of reproduction available for specific data and cost of copying, user should write to the World Data Center.

The magnetograms from most observatories contain the recordings for a 24-hour period. Since the records from different observatories may not show the same 24-hour period, the interval (UT) for which the copies of the recordings are required should be specified.

NOTE:

The 2.5 minute values for observatories listed in this catalogue were scaled from the magnetograms by means of a semi-automatic scaling machine and are stored on IBM-compatible magnetic tape. Hourly values computed from these 2.5 minute values are also available. The cost of copying these data will be furnished on request.

* Observations began in 19th century.

COLLEGE

HORIZONTAL INTENSITY = 12000 plus tabular values, in gammas

DECEMBER 1963

Tabular values are averages for successive hourly periods, beginning at midnight, 150th West Meridian Time.

Quiet (Q) and stormy (S) days are based on Universal Time.

( ) Interpolated

[Significant portion of hour interpolated.

□ No record; or no values available because of faulty record.

[ ] Scaling uncertain because of magnetic storm.

△ Record off sheet for part or all of hour; if value is given, curve was estimated for missing part.

D.1 GEOMAGNETIC INDICES

AURORAL ELECTROJET (AE) INDICES

MAGNETIC TAPE:

Hourly Values:	July 1957 - December 1968
2.5 Minute values:	September 1964 - December 1968
2.5 Minute values:	January 1970 - December 1970

MICROFILM:

Hourly Values:	July 1957 - December 1968
Plots of Hourly Values:	July 1957 - December 1964
2.5 Minute Values:	September 1964 - December 1968
Plots of 2.5 Minute Values:	September 1964 - December 1968
Plots of 2.5 Minute Values:	January 1970 - December 1970

PUBLICATIONS:

1. Hourly Values of the Auroral Electrojet Activity Index AE, UAG-R Series, Geophysical Institute, University of Alaska 7/1957 - 12/1964.

NOTE: 2.5 minute AU and AL values are also available on magnetic tape.

EQUATORIAL Dst INDICES

Hourly values of Dst are published as well as on magnetic tape for 1957-1971.

The Tables of K Indices are received on a current basis (within 6 months of the recording period) from the above list of observatories.

PUNCHED CARDS:

K - Fredericksburg, 1 card/day 1966 to date.

PUBLICATION:

IAGA Bulletin No. 12 Series, International Union of Geodesy and Geophysics - K indices for individual stations through 1969.

NOTE: Kn, Ks, Km indices are available on magnetic tape for 1959-1970, and published for 1964-1967.

Kp, Ap, Cp, Ci, C9 Indices

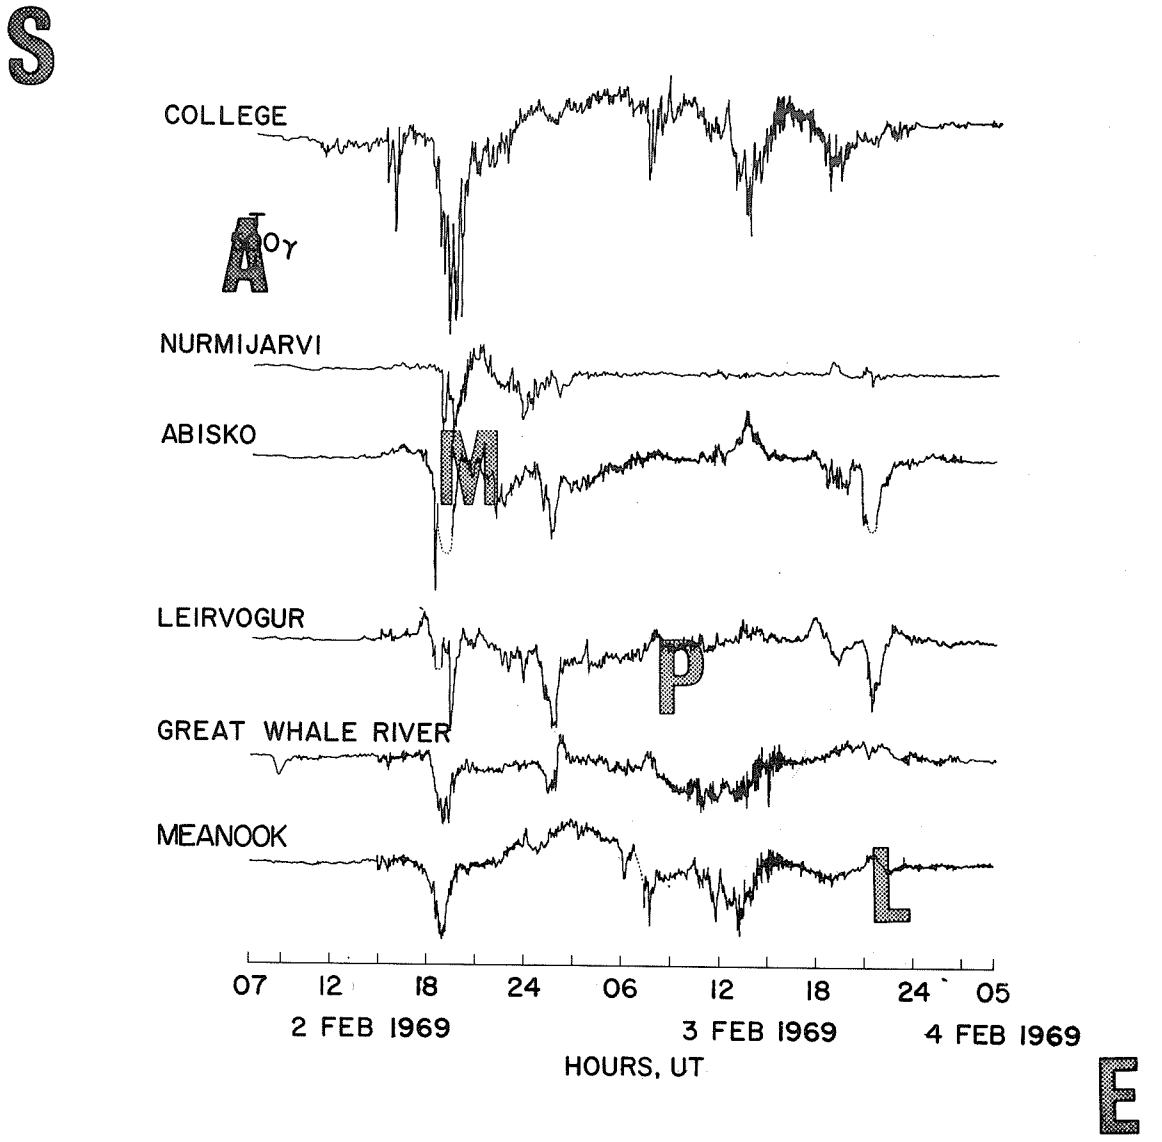
These data are available as follows:

TABULATIONS: (Kp, Ap) Jan. 1, 1932 to date
PUNCHED CARDS: (Kp, Ap) one card/day 1932 to date
(Ci) one card/day 1960 to date
MAGNETIC TAPE (ESRO): Kp for 1932 to date, Cp and C9 for 1951 to date. (See Page 204).
(Tape also includes solar rotation number and day of cycle; sunspot number; Ottawa flux)

PUBLICATIONS:

1. Solar-Geophysical Data, NOAA - monthly Kp, Ap, Cp, Ci, K_{FR} indices; monthly list of principal magnetic storms and magnetograms of storms selected by S. -I. Akasofu (all original records reduced to the same sensitivity and time scale.)
2. IAGA Bulletin No. 18, International Union of Geodesy and Geophysics, Kp, Ap and Cp indices for 1932-1961.

REDUCED MAGNETOGRAMS OF GEOMAGNETIC STORMS



Prepared by Dr. S. -I. Akasofu of the Geophysical Institute of the University of Alaska from magnetograms furnished by World Data Center A for Solar-Terrestrial Physics.

D.1 SPECIAL EVENTS

Listings of special events are available from many observatories. For information concerning the availability of these data for any particular observatory-month, please write to the Data Center. These listings are being received on a current basis from the following observatories.

Principal magnetic storms - one card/storm/observatory - 1/1966 to date.

PUBLICATIONS:

Solar-Geophysical Data, NOAA - monthly list of principal magnetic storms and magnetograms of storms selected by S. -I. Akasofu (all original records reduced to the same sensitivity and time scale).

AT BOULDER

REPORTS OF SPECIAL PROJECTS

Aeromagnetic Survey in Japan by the Geographical Survey Institute and the Hydrographic Office (Japan) - Approximately 8500 values of magnetic declination, inclination, and horizontal, vertical, and total intensities obtained in flights made during the years 1961-1965.

Airborne Magnetic Survey by the Division of Geomagnetism, Dominion Observatory (Canada) - Approximately 11,000 values of magnetic declination, inclination and horizontal, vertical, and total field intensities obtained in flights made during the years 1953-1963.

Hermanus Magnetic Observatory, South African Antarctic Scientific Records, Measurements of Total Magnetic Intensity During Voyages of the "RSA", December 1964-April 1965, Geophysical Series 1, Report No. B4, approximately 300 values.

Hermanus Magnetic Observatory, South African Antarctic Scientific Records, Seaborne Magnetic Measurements, Cape Town-Sanse December 1965-January 1966, Geophysical Series 1, Report No. B.7, Approximately 250 values of total magnetic intensity.

Nagata, T., T. Oguti, and S. Kakinuma, Results of Geomagnetic Total Force Surveys over Southern Ocean, Indian Ocean, and South China Sea, National Antarctic Committee, Science Council of Japan, 75, 1961.

Project Magnet (Airborne Geomagnetic Data) - Approximately 40,000 values of magnetic declination, inclination, and horizontal, vertical, and total intensity obtained in flights made during the years 1953-1963 by the U.S. Naval Oceanographic Office. Special Publication No. 66 and Special Publication No. 66, Supplement No. 1, Airborne Magnetic Data, contain these data.

VEMA MAGNETIC DATA - Approximately 3600 geomagnetic total field intensity readings obtained on cruises of the R/V VEMA during the years 1959-1962 by the Lamont Geological Observatory.

ZARYA MAGNETIC DATA - Results of magnetic observations made on board the USSR Ship ZARYA by the Magnetic Survey Section, Leningrad Office, IZMIRAN on four expeditions during the years 1957-1967. Data consist of approximately 3400 values of declination and horizontal, vertical, and total intensities.

KEY TO SYMBOLS

A = 12 Months
B = 6-11 Months
C = 1-5 Months

Q = Data exist but not held at WDC-A; QUERY WDC-A to assist in obtaining data

P = Data PRESUMED to exist but not held at WDC-A; WDC-A will attempt to ascertain availability

S = Program STOPPED operations (see MASTER STATION LIST for actual date)

D.2

The stations listed on pages 217, 219 and 221 have reported their research programs at the request of Working Group 5 of Commission IV of the International Association of Geomagnetism and Aeronomy. Details are available in "Tabulation of Rapid-Run Geomagnetic Micropulsation Stations" by H. B. Liemohn. The report is available from WDC-A for Solar-Terrestrial Physics. Corrections or additions to its entries should be sent to WDC-A for Solar-Terrestrial Physics, NOAA, Boulder, Colorado, U.S.A. 80302.

SPACECRAFT NAME- MARINER 4 NSSDC ID 64-077A
OTHER NAMES- 1964 77A

LAUNCH DATE- 11/28/64 DATE LAST SCIENTIFIC DATA RECORDED- 12/20/67

AGENCY- NASA-JPL SPACECRAFT WEIGHT IN ORBIT- 262 KG

ORBIT TYPE- HELIOCENTRIC EPOCH- 07/15/65 ORBIT PERIOD- 567 DAYS
APOGEE- 1.58 AU RAD PERIGEE- 1.1 AU RAD INCLINATION- 0 DEGREES

SPACECRAFT BRIEF DESCRIPTION
MARINER 4 WAS THE FOURTH IN A SERIES OF SPACECRAFT USED FOR PLANETARY EXPLORATION IN THE FLYBY, OR NONLANDING, MODE. THE SPACECRAFT WAS ORIENTED BOTH TOWARD THE SUN AND THE STAR CANOPUS. IT WAS LAUNCHED ON NOVEMBER 28, 1964, AND PASSED WITHIN 9846 KM OF THE PLANET MARS ON JULY 15, 1965. IN ADDITION TO TELEVISING PICTURES OF THE MARTIAN SURFACE, THE SPACECRAFT INSTRUMENTS MEASURED THE MAGNETIC FIELDS, CHARGED PARTICLES, PLASMA, AND DUST IN INTERPLANETARY SPACE AND IN THE VICINITY OF MARS. THE MISSION IS CONSIDERED A SUCCESS.

EXPERIMENT NAME- HELIUM MAGNETOMETER NSSDC ID 64-077A-02

ORIGINAL EXPERIMENT INSTITUTION- NASA-JPL

INVESTIGATORS- E.J. SMITH, NASA-JPL , PASADENA, CALIF.

DATE LAST USEFUL DATA RECORDED- 12/20/67

EXPERIMENT BRIEF DESCRIPTION
A VECTOR, LOW FIELD, HELIUM MAGNETOMETER, NOT TO BE CONFUSED WITH THE RUBIDIUM VAPOR OR HELIUM VAPOR MAGNETOMETER, WAS USED TO MEASURE THE INTERPLANETARY MAGNETIC FIELD. THE THREE COMPONENTS OF THE FIELD WERE MEASURED ESSENTIALLY SIMULTANEOUSLY, BUT LATER TRANSMITTED SEQUENTIALLY. EACH OBSERVATION REPRESENTED AN AVERAGE OVER APPROXIMATELY 1 SEC, I.E., THE RESPONSE DROPPED 3 DB FOR FREQUENCIES OF 1 HZ, AND HIGHER FREQUENCY INFORMATION WAS ESSENTIALLY LOST. IN EACH DATA FRAME, FOUR VECTOR MEASUREMENTS WERE MADE, SEPARATED BY INTERVALS OF 1.5, 0.9, AND 2.4 SEC. THE WHOLE FRAME WAS REPEATED EVERY 12.5 SEC. THERE WAS AN UNCERTAINTY OF PLUS OR MINUS 0.35 GAMMA PER COMPONENT. FIELDS WERE MEASURED AS HIGH AS 625 GAMMAS. THE EXPERIMENT OPERATED SUCCESSFULLY FOR THE OPERATIONAL LIFETIME OF THE SPACECRAFT.

DATA SET NAME- ORIGINAL VECTOR MAGNETIC FIELD DATA, 3-HR AVERAGES ON TAPE NSSDC ID 64-077A-02A

AVAILABILITY OF DATA SET- DATA AT NSSDC BEING PROCESSED

TIME SPAN OF DATA- 11/28/64 TO 10/01/65

DATA SET BRIEF DESCRIPTION
THESE ANALYZED DATA CONSIST OF ONE 7-TRACK, BCD MAGNETIC TAPE AS SUPPLIED BY THE EXPERIMENTER. THE TAPE CONTAINS 3-HR AVERAGED VALUES OF THE VECTOR COMPONENTS OF THE MAGNETIC FIELD (IN A HELIOCENTRIC SOLAR POLAR COORDINATE SYSTEM), THE FIELD MAGNITUDE, THE RMS DEVIATION OF EACH OF THE AVERAGED VALUES, AND THE NUMBER OF DATA POINTS USED IN THE AVERAGE. THESE DATA COVER HELIOCENTRIC RADIAL DISTANCES FROM 1 TO 1.54 AU AND TIME PERIODS INCLUDING 11 SOLAR ROTATIONS.

SPACECRAFT NAME- EXPLORER 34 NSSDC ID 67-051A
OTHER NAMES- IMP-F, IMP 4, 1967 51A

LAUNCH DATE- 05/24/67 DATE LAST SCIENTIFIC DATA RECORDED- 05/03/69

AGENCY- NASA-OSSA SPACECRAFT WEIGHT IN ORBIT- 75 KG

ORBIT TYPE- GEOCENTRIC EPOCH- 05/24/67 ORBIT PERIOD- 6225 MIN.
APOGEE-211112. KM ALT PERIGEE- 278. KM ALT INCLINATION- 67.4 DEGREES

SPACECRAFT BRIEF DESCRIPTION
THIS SPACECRAFT WAS PLACED INTO A HIGH-INCLINATION, HIGHLY ECCENTRIC EARTH ORBIT. THE APOGEE POINT LAY NEAR THE ECLIPTIC PLANE AND HAD AN INITIAL LOCAL TIME OF ABOUT 1900 HR. THE SPACECRAFT WAS SPIN STABILIZED, AND IT HAD AN INITIAL SPIN PERIOD OF 2.6 SEC. LIKE THE EARLIER IMP'S, THIS SPACECRAFT WAS INSTRUMENTED TO STUDY INTERPLANETARY MAGNETIC FIELDS, ENERGETIC PARTICLES AND PLASMA. USEFUL DATA WERE ACQUIRED UNTIL JUST BEFORE SPACECRAFT REENTRY, WHICH OCCURRED ON MAY 3, 1969.

EXPERIMENT NAME- LOW-ENERGY ELECTRONS AND PROTONS NSSDC ID 67-051A-04

ORIGINAL EXPERIMENT INSTITUTION- U OF IOWA

INVESTIGATORS- J.A. VAN ALLEN, U OF IOWA , IOWA CITY, IOWA
L.A. FRANK, U OF IOWA , IOWA CITY, IOWA

DATE LAST USEFUL DATA RECORDED- 05/03/69

EXPERIMENT BRIEF DESCRIPTION
THIS EXPERIMENT WAS DESIGNED TO MEASURE, IN EIGHT CHANNELS, THE DIRECTIONAL LOW-ENERGY ELECTRON AND PROTON INTENSITIES IN THE RANGE 125 EV TO 52 KEV INSIDE THE EARTH'S MAGNETOSPHERE AND IN THE INTERPLANETARY REGIONS. THE INSTRUMENTATION CONSISTED OF TWO CURVED-PLATE CYLINDRICAL ELECTROSTATIC ANALYZERS (LEPEDEA DETECTORS), TWO BENDIX CONTINUOUS-CHANNEL MULTIPLIERS ("CHANNELTRONS"), AND AN ANTON 213 GM TUBE. THE GM TUBE WAS USED TO MEASURE ELECTRON INTENSITIES (E GREATER THAN 40 KEV) IN THE EARTH'S MAGNETOSPHERE. THE DETECTOR ACCUMULATORS WERE READ OUT FOUR TIMES EVERY 20.48 SEC. EACH ACCUMULATION WAS ABOUT 480 MSEC LONG (SPACECRAFT SPIN PERIOD WAS INITIALLY 2.6 SEC). THE INSTRUMENTS PERFORMED NORMALLY FROM LAUNCH UNTIL THE SATELLITE DECAYED FROM ORBIT ON MAY 3, 1969.

DATA SET NAME- LEPEDEA MOTION PICTURE SURVEY OF THE MAGNETOSPHERE NSSDC ID 67-051A-04A

AVAILABILITY OF DATA SET- DATA AT NSSDC BEING PROCESSED

TIME SPAN OF DATA- 06/30/67 TO 07/04/67

EXPERIMENT NAME- PLASMA WAVE DETECTOR NSSDC ID 68-014A-24

ORIGINAL EXPERIMENT INSTITUTION- TRW SYSTEMS INC

INVESTIGATORS- G.M. CROOK, TRW SYSTEMS INC , REDONDO BEACH, CALIF.
F.L. SCARF, TRW SYSTEMS INC , REDONDO BEACH, CALIF.
R.W. FREDRICKS, TRW SYSTEMS INC , REDONDO BEACH, CALIF.

DATE LAST USEFUL DATA RECORDED- EXPERIMENT STILL OPERATIONAL

EXPERIMENT BRIEF DESCRIPTION
THE PLASMA WAVE DETECTOR INCLUDES FIVE ELECTRIC DIPOLES AND THREE ORTHOGONAL SEARCH-COIL MAGNETOMETERS MOUNTED ON A 2.2-FT BOOM. THE THREE 0.5-M LONG ORTHOGONAL ELECTRIC DIPOLES ARE NORMAL TO THE PLANES OF THE MAGNETOMETERS. EACH OF THE ORTHOGONAL COMPONENTS OF THE DIPOLE AND MAGNETOMETER ARE SAMPLED SIMULTANEOUSLY FOR 9.2 SEC THROUGH 15 PERCENT BANDPASS FILTERS IN THE FOLLOWING SEQUENCE -- 0.56, 1.3, 3.0, 7.35, 14.5, 30.0, AND 70.0 KHZ FOR EACH DIPOLE CONCURRENT WITH 0.56, 0.56, 0.56, 0.56, 0.56, 70.0, 70.0, AND 70.0 KHZ FOR EACH MAGNETOMETER. REPEAT TIME FOR THIS SEQUENCE IS 3.26 MIN. ONBOARD AUTOCORRELATION BETWEEN EACH E AND B MEASUREMENT IS PERFORMED. THE REMAINING TWO BOOM-MOUNTED DIPOLES ARE COLINEAR, DIFFERING ONLY IN DIPOLE LENGTH, EACH IS MONITORED THROUGH A 200-HZ 10 PERCENT FILTER FOR 2 SEC ONCE EVERY 9.2 SEC. IN ADDITION TO THESE DIGITAL DATA, 1- TO 22-HZ ELECTRIC FIELD DATA TAKEN FROM ONE MAIN DIPOLE AND YIELDING POWER SPECTRUM INFORMATION FOR THAT AXIS ARE CONTINUOUSLY MONITORED BY A SPECIAL PURPOSE ANALOG TELEMETRY SYSTEM. THRESHOLD SENSITIVITY OF THESE MEASUREMENTS IS TELEMETERED WITH THE DIGITAL DATA. ALSO, INTENSE EMISSIONS BELOW 1 KHZ AND ABOVE 22 KHZ MAY STILL BE DETECTABLE. THE EXPERIMENT HAS OPERATED NORMALLY. HOWEVER, MUCH OF THE DATA AFTER APRIL 1968 IS OF POOR QUALITY AS A RESULT OF TRANSMITTER FAILURE.

DATA SET NAME- ORIGINAL ELECTRIC FIELD SONOGRAMS ON MICROFILM NSSDC ID 68-014A-24A

AVAILABILITY OF DATA SET- DATA AT NSSDC BEING PROCESSED

TIME SPAN OF DATA- 03/27/68 TO 09/15/68

DATA SET BRIEF DESCRIPTION
THIS DATA SET CONSISTS OF ELECTRIC FIELD SONOGRAMS GENERATED BY THE EXPERIMENTER FROM ANALOG DATA ON NINE ROLLS OF 35-MM MICROFILM. THE DATA COVER AN AVERAGE OF 3 HR PER DAY FOR 8 DAYS INTERSPERSED BETWEEN MARCH 27, 1968, AND SEPTEMBER 15, 1968. THE DATA WERE PROCESSED AT A RATE OF 16 SEC PER IN. THE FREQUENCY INTERVALS INCLUDED IN THE SET ARE 0 TO 2.5, 0 TO 5, 0 TO 10, 9 TO 10, 0 TO 20, AND 10 TO 30 KHZ, WITH THE 0- TO 5-, 0- TO 10-, AND 0- TO 20-KHZ INTERVALS PRESENTED MOST OFTEN. THE ANALOG DATA USED TO GENERATE THESE SONOGRAMS ARE FROM ONE AXIS OF THE THREE ORTHOGONAL DIPOLES

E. AURORA

All-sky camera photographs are the main type of auroral data, recorded on film (16 or 35 mm) in rolls approximately 100 feet in length. These cameras are located mainly in the northern and southern auroral regions; a few are in the sub-auroral belts. These data are supplemented by photographs of auroras taken by ordinary camera (not all-sky) and telescopes, and by sets of simultaneous photographs from groups of associated stations taken to determine the heights and location of auroras. Spectrographic (patrol spectrograph) data are available; however, though copies may be used for verifying the presence or absence of spectral lines and bands, they cannot be considered suitable for studies for which details are essential, e.g., microphotometry, since normal copying processes introduce uncertainties in spectral resolution and densities. Radar echo (auroral) data are recorded on 16 mm film. The tabulations are divided into northern and southern hemispheres, in north to south order. The symbol A represents data for substantially all of the winter months, while the symbol C represents data for less than all the winter months. To indicate the auroral seasons for northern hemisphere stations the symbol is placed between the calendar years, and for southern hemisphere stations the symbol is placed under the calendar year.

E.2 VISUAL OBSERVATIONS

The visual data held at Boulder were transferred from the center at Ithaca, New York, in July 1968. Currently there are no routine visual observations being received.

Visual data have been the main data obtained in the sub-auroral and min-auroral belts. The observers included members of the meteorological services.

Some of the data are on punched cards. All cards give a description of certain angular intervals of the north-south meridian. The intervals correspond to degrees of latitude for forms 100 km high. Each card from the Weather Bureau system contains six hourly reports of this type, while the volunteers (Canadian and United States) and Antarctic cards refer to a single time. Every card contains the latitude of the observer, the time of the observation, and information about color and motion, in addition to the description of the auroral forms and intensity in each angular interval of the meridian.

The punched cards are designed to facilitate listing auroral data by latitude of the aurora rather than that of the observer; geographic or geomagnetic latitude can be used. The Weather Bureau data are listed by longitude and latitude for every hour, while the other programs are listed by latitude and time.

The IGY, IGC, and IQSY auroral data from Canada and the United States are plotted on hourly maps, drawn to a scale of about 170 miles to the inch. Microfilm copies of the maps have been sent to WDCs B and C. The northern hemisphere data for the IGY and the IQSY have been collected into Northern Hemisphere Synoptic Auroral Maps and copies of these maps have been exchanged between the Data Centers. Some final maps for the IGY have been published in the Annals of the IGY and the IQSY final maps are available.

The above maps give two geographic coordinates at a given time, but there are many purposes for which it is more valuable to have latitude and time plotted as variables, for a given longitude. Such a plot is called a Visoplot; all three WDCs supplied them for publication in the IGY Annals. The Visoplots show the position of the aurora, or its inferred position, or its known absence. North American Visoplots also show the type of form present. Each Visoplot covers 45° of geomagnetic latitude and 24 hours of Universal Time, and applies to one of the two sectors of geomagnetic longitude which cover the western hemisphere.

The majority of the reports are on the special forms provided during the IGY-IGC programs. When these showed no aurora, they were not put on IBM cards, but are still available for the maps and for reference.

The Antarctic workers kept aurora log books, which are stored at WDC-A. These include, in some cases, summaries of the relevant data. Written observations by mariners are on file, mostly taken from the Monthly Notices of the Hydrographic Office.

The IQSY All-sky Camera data from many of the All-sky cameras run by College, Alaska, were put on special report forms and were used for inclusion in the synoptic maps.

The IBM cards have been analyzed for various projects, and written reports are on file in multilith form. These reports cover the South Pole observations, the Ellsworth observations, a tentative list of aurora sizes during the IGY, and statistical analyses of the Visoplot data. Most of them are available in IGY General Report No. 12 of WDC-A, or the Visual Aurora Series (in limited supply).

Digests of the above data are available. The main ones are:

1. IGY General Report #12, "Report on IGY Visual Aurora Observations"

2. Volumes 1 - 10 of the description and analysis of data at the Visual Aurora Subcenter while at University of Cornell are available. Volume 1 is a collection of data studies published previously as the experimental part of "The Origin and Morphology of the Aurora." Volume 2 and 7 are digests of auroral theories. Volume 8 includes a summary of studies on the auroral-radio effects conducted by the University of Cornell and a summary report on the Visual Aurora Newsletters. Volume 9 is a collection of data on the auroral zones and conjugate points.

3. "North American Visoplots," Canadian-US IGY data

4. IQSY Northern Hemisphere Synoptic Auroral Maps.

E.2 VISUAL AURORA

AREA	TYPE OF DATA	PERIOD COVERED
Central America		
Cuba	Reports on 09/23/57 and 02/11/58 aurora

F. COSMIC RAYS

The data are taken from observations made with the following types of cosmic ray instruments:

Super Neutron Monitor	Underground Telescope
Neutron Monitor	Narrow Angle Telescope
Cubical Meson Telescope	Shower Apparatus (non-synoptic)
Ionization Chamber	

The cosmic ray stations are arranged in order of vertical cutoff rigidities, in Bv, calculated using the 6-degree quiescent magnetic field coefficients by Finch-Leaton for epoch 1955.0. Whether the data are both corrected and uncorrected data, pressure-corrected data only, or uncorrected data only, is indicated.

KEY TO SYMBOLS

A = 12 Months
B = 6-11 Months
C = 1-5 Months
+ = Continued with Super Neutron Monitor See Super NM listing.

Q = Data exist but not held at WDC-A; QUERY WDC-A to assist in obtaining data
P = Data PRESUMED to exist but not held at WDC-A; WDC-A will attempt to ascertain availability
S = Program STOPPED operations (see MASTER STATION LIST for actual date)

1 = Both corrected and uncorrected data
2 = Pressure-corrected data only
3 = Uncorrected data only

NEUTRON MONITORS AND SUPERMONITORS

MAGNETIC TAPE

Scientists transmitting computer-usable data to the World Data Center are asked to use the following procedure:

Data supplied on magnetic tape will be on standard 7 track, 1/2 inch width tape. Tape densities are optional at either 200 BPI, 556 BPI or 800 BPI. It is recommended that 556 BPI be used for tapes transmitted through the mails. The data will be written on the tape in Binary Coded Decimal (BCD) even parity with one card image comprising one logical and physical record on the tape. A physical record on the magnetic tape supplied to stations by World Data Center-A will consist of the 80 characters of the card image. However, tapes sent to World Data Center-A may have the 80 characters of the card image plus as many characters as are necessary to make one physical record (i.e., tapes from experimenters having IBM 700/7000 series equipment will have 80 plus 4 characters per physical record).

A logical file normally consists of a year's data. The first seven card images on every file will always contain alphabetic characters (header cards). The end of every file will be marked by seven blank (or zero) card images, the equivalent of one day's data, followed by an end of file mark. This will facilitate recognition of the beginning and ending of files.

The first file of any data tape (both tapes sent by the experimenter to the data center and those sent by the data center in answer to a specific request) will contain the seven header cards previously described, seven blank (or zero) card images (indicating an end of file) and an end of file mark. Thus, this first file contains a total of 14 card images. The second and succeeding data files will contain the seven data header cards followed by a year, or less, of data. One year's data is the maximum to be contained in one file, but it may be less. A file mark should be inserted whenever significant changes (i.e., scaling factor, barometric coefficient, monitor configuration) occur. The start of the next file will be another seven card header group reflecting these changes. It would be preferred that at least one month's data be contained in a data file, and that whenever possible the file mark occur at the end of a month. To indicate the end of data on a tape, the last seven cards (normally blank or zero cards to indicate an end of file) will contain a "blank-999" in the columns where pressure, uncorrected and corrected data would appear if these were a data set. The columns reserved for the identification number, year, day number and card number should still contain blanks or zeros.

Following a WDC-A Upper Atmosphere Geophysics Circular Letter to Cosmic Ray Scientists (No. 2 of April 5, 1968) many groups have supplied their data to WDC-A in the recommended standard format. The essentials of this format are repeated below for convenience of the user:

HEADER CARDS - Header information on seven cards in alphabetic form will appear at the beginning of each year of data and whenever a significant change (i.e., scaling factor, barometric coefficient, monitor configuration) occurs:

Card 1 - Station Identification (code name)	Columns 1-4
Station name	Columns 7-36
Station latitude	Columns 37-41
North or South latitude specifications	Columns 43-47
Station longitude	Columns 49-54
East or West longitude specifications	Columns 56-59
Station altitude	Columns 61-66
Units of altitude	Columns 67-78
Card 2 - Description of instrument	Columns 1-80
Card 3 - Scaling factor	Columns 13-18
(Explanatory text can appear anywhere else on the card except columns 13-18 which are reserved for the numbers.)	
Card 4 - Standard station pressure	Columns 61-66
(Explanatory text, including units, can appear anywhere else on the card except columns 61-66 which are reserved for the numbers.) The pressure may be given in any scientifically acceptable units; however, please specify the units.	
Card 5 - Barometric coefficients	Columns 13-18
(Explanatory text can appear anywhere else on the card except columns 13-18 which are reserved for the numbers.) Please give units.	
Card 6 - Credit statement (any text)	Columns 1-80
Card 7 - Period of data covered	
Starting month (up to 6 alphabetic characters)	Columns 7-12
Starting day of month	Columns 13-14
Ending month (up to 6 alphabetic characters)	Columns 19-24
Ending day of month	Columns 25-26
Year (4 digits)	Columns 29-32

Cont'd. on p. 248.

Format "STD" refers to the internationally accepted format explained on pp. 246 and 248.

Data can be furnished on magnetic tape, cards, or listings by month or days.

COMPUTER-USABLE STANDARD FORMAT (CONT'D.)

DATA CARDS

Column Assignments: Data Cards 1-6

Station Identification (code name)	Columns 1-4
Year (last two digits)	Columns 5-6
Day of year (001-365 or 001-366)	Columns 7-9
Card number (1-6)	Column 10
Data Quality Tags	Columns 11-12
First Data Group Pressure (e.g., 01 UT)	Columns 13-17
Uncorrected Counting Rate	Columns 18-23
Corrected Counting Rate	Columns 24-29
Second Data Group (e.g., 02 UT)	
Pressure	Columns 30-34
Uncorrected Counting Rate	Columns 35-40
Corrected Counting Rate	Columns 41-46
Third Data Group (e.g., 03 UT)	
Pressure	Columns 47-51
Uncorrected Counting Rate	Columns 52-57
Corrected Counting Rate	Columns 58-63
Fourth Data Group (e.g., 04 UT)	
Pressure	Columns 64-68
Uncorrected Counting Rate	Columns 69-74
Corrected Counting Rate	Columns 75-80

NOTE: All numbers are right adjusted in their fields.

Column Assignments: Data Card 7

Station Identification (code name)	Columns 1-4
Year (last two digits)	Columns 5-6
Day of year (001-365 or 001-366)	Columns 7-9
Card number (7)	Column 10
Normalizing factor multiplied by 10,000 (integer format)	Columns 11-17
Optional special data factors	Columns 18-51
(no special column assignments, but it would be convenient if column assignments of the first six cards could be retained)	
Daily sum of the uncorrected counting rate	Columns 52-57
Daily sum of the corrected counting rate	Columns 58-63
Daily average pressure (for the hours corrected data are present)	Columns 64-68
The number of hours of data present	Columns 69-74
Daily average corrected counting rate	Columns 75-80

NOTE 1: All numbers are right adjusted in their fields.

NOTE 2: The only data on this card that the experimenters are required to supply is the normalizing factor and optional special data factors. The daily sums and averages can be calculated by the data center when the card is entered into the computer.

It should be mentioned that occasionally an experimenter's equipment will be inoperative for a day or two. In this case the data cards, with zero for the counting rate, should still be included in order to preserve the original sequence and so that the data center and potential data user will know that no data are available instead of questioning whether or not a day was accidentally missed in supplying the data.

KEY TO SYMBOLS

A = 12 Months
B = 6-11 Months
C = 1-5 Months

1 = Both corrected and uncorrected data
2 = Pressure-corrected data only
3 = Uncorrected data only

Q = Data exist but not held at WDC-A; QUERY WDC-A to assist in obtaining data
P = Data PRESUMED TO EXIST BUT NOT HELD AT WDC-A; WDC-A will attempt to ascertain availability
S = Program STOPPED operations (see MASTER STATION LIST for actual date)

F.5 AIRCRAFT AND SHIP MEASUREMENTS

AT BOULDER

No data currently held, but institutions are asked to provide information as outlined in STP NOTES No. 6, p. 48.

SPACECRAFT NAME- OGO 2 NSSDC ID 65-081A
OTHER NAMES- OGO-C, POGO 1, S 5C, 1965 81A

LAUNCH DATE- 10/14/65 DATE LAST SCIENTIFIC DATA RECORDED- 10/--/67

AGENCY- NASA-OSSA SPACECRAFT WEIGHT IN ORBIT- 520 KG

ORBIT TYPE- GEOCENTRIC EPOCH- 10/15/65 ORBIT PERIOD- 104 MIN.
APOGEE- 1510. KM ALT PERIGEE- 414. KM ALT INCLINATION- 87.356 DEGREES

SPACECRAFT BRIEF DESCRIPTION
OGO 2 WAS A LARGE OBSERVATORY INSTRUMENTED WITH 20 EXPERIMENTS DESIGNED TO TAKE SIMULTANEOUS, CORRELATIVE OBSERVATIONS OF AURORA AND AIRGLOW EMISSIONS, ENERGETIC PARTICLES, MAGNETIC FIELD VARIATIONS, IONOSPHERIC PROPERTIES, ETC., ESPECIALLY OVER THE POLAR AREAS. THE MAIN BODY OF THE SPACECRAFT WAS ATTITUDE CONTROLLED BY MEANS OF HORIZON SCANNERS AND GAS JETS. ITS ORIENTATION WAS MAINTAINED CONSTANT BOTH WITH RESPECT TO THE EARTH AND WITH RESPECT TO THE DIRECTION OF THE SUN. THE SOLAR PANELS ROTATED ON A HORIZONTAL SHAFT EXTENDING TRANSVERSELY THROUGH THE MAIN BODY. THE ROTATION OF THE PANELS WAS ACTIVATED BY SUN SENSORS SO THAT THE PANELS RECEIVED MAXIMUM SUNLIGHT. FOUR EXPERIMENTS WERE MOUNTED ON THE SOLAR PADDLES. ANOTHER SHAFT ORIENTED VERTICALLY AND MOUNTED AT THE FRONT OF THE SPACECRAFT CARRIED FIVE EXPERIMENTS. NOMINALLY THESE SENSORS OPERATED LOOKING FORWARD IN THE ORBIT PLANE OF THE SATELLITE. ROTATION OF OVER 90 DEG RELATIVE TO THE NOMINAL POSITION, AND OF OVER 90 DEG BETWEEN THE UPPER AND LOWER EXPERIMENT PACKAGE ABOUT THIS AXIS, WAS POSSIBLE. NEWTON'S PARTICLE EXPERIMENT FAILED ON LAUNCH, AND KREPLIN'S SOLAR X-RAY EXPERIMENT SHORTLY THEREAFTER. SOON AFTER ACHIEVING ORBIT, DIFFICULTIES IN MAINTAINING EARTH LOCK WITH HORIZON SCANNERS CAUSED EXHAUSTION OF ATTITUDE CONTROL GAS BY OCTOBER 23, 10 DAYS AFTER LAUNCH. AT THIS TIME THE SPACECRAFT ENTERED A SPIN MODE (APPROX. 0.11 RPM) WITH A LARGE CONING ANGLE ABOUT THE PREVIOUSLY VERTICAL AXIS. FIVE EXPERIMENTS BECAME USELESS WHEN THE SATELLITE WENT INTO THIS SPIN MODE. SIX ADDITIONAL EXPERIMENTS WERE DEGRADED BY THIS LOSS OF ATTITUDE CONTROL. BY APRIL 1966, BOTH BATTERIES HAD FAILED SO THAT OBSERVATIONS WERE LIMITED TO SUNLIT PORTIONS OF THE ORBIT. BY DECEMBER 1966, ONLY EIGHT EXPERIMENTS WERE OPERATIONAL, NINE OF WHICH WERE NOT DEGRADED BY THE SPIN MODE OPERATION. BY APRIL 1967, THE TAPE RECORDERS HAD MALFUNCTIONED SO THAT ONLY ONE THIRD OF THE RECORDED DATA WAS PROCESSABLE. THE SPACECRAFT WAS SHUT DOWN IN OCTOBER 1967 WITH EIGHT EXPERIMENTS STILL OPERATIONAL.

EXPERIMENT NAME- GALACTIC AND SOLAR COSMIC RAY NSSDC ID 65-081A-08

ORIGINAL EXPERIMENT INSTITUTION- U OF MINNESOTA

INVESTIGATORS- W.R. WEBBER, U OF NEW HAMPSHIRE , DURHAM, N.H.

DATE LAST USEFUL DATA RECORDED- 10/24/65

EXPERIMENT BRIEF DESCRIPTION
THIS COSMIC-RAY TELESCOPE EXPERIMENT WAS DESIGNED TO MEASURE THE DIFFERENTIAL ENERGY SPECTRA OF PROTONS, HELIUM NUCLEI, AND HEAVIER NUCLEI UP TO Z = 10, WITHIN THE ENERGY RANGE OF 50 TO 2000 MEV PER NUCLEON. THE TELESCOPE HAD A MAXIMUM SAMPLING RATE OF ONE COUNT PER 288 MSEC. THE TELESCOPE CONSISTED OF TWO DETECTORS, A SCINTILLATOR WITH ITS ASSOCIATED PHOTOMULTIPLIER (PM) TUBE AND A SCINTILLATOR AND A CERENKOV ELEMENT SANDWICH WITH BOTH ELEMENTS OPTICALLY COUPLED TO THE SAME PM TUBE. A 70-NANOSEC COINCIDENCE CIRCUIT COUPLED THE TWO DETECTORS TO FORM THE TELESCOPE. PULSES FROM EACH DETECTOR WERE PULSE HEIGHT ANALYZED. SAMPLE PULSE HEIGHTS, THE COINCIDENCE COUNT RATE, AND THE COUNT RATE OF THE FIRST DETECTOR WERE TELEMETERED. THE NOISE LEVELS OF THE SPACECRAFT INCREASED TO SUFFICIENT AMPLITUDE TO RENDER THE SINGLES RATE DATA UNUSABLE EXCEPT DURING ECLIPSE PERIODS. ALL THE USEFUL DATA FROM THIS EXPERIMENT WERE OBTAINED BETWEEN OCTOBER 15 AND OCTOBER 24, 1965, AND ABOUT 17.4 PERCENT OF THE DATA OBTAINED DURING THIS PERIOD CONTAINS USEFUL INFORMATION.

G. AIRGLOW

CONTENTS

Airglow data listed are the results of photometric observations. The data in this catalogue are zenith intensities and ratio of intensities at equal angular distances north and south. The stations are by geographic latitude in descending order north to south with spectral wavelength in code.

G.1 AIRGLOW

MISCELLANEOUS:

The Data Center holds strip-chart records and observational logs for night airglow observations obtained on board the U.S.N.S. Croatan, February 18 - May 2, 1965. In the course of 63 nights observations were made of 4278, 5577 and 6300 Å emission, vertically and at 75° and 85° elevation, as the ship cruised from 35°N to 60°S along (approximately) the 75°W meridian.

PUBLICATIONS:

1. World Data Center A, Upper Atmosphere Geophysics Report Series UAG #1 - IQSY Night Airglow Data, July 1968. (Data in this publication also available on punched cards).

2. ESSA Technical Report, IER 16-ITSA-16 - "Fritz Peak Observations of Stable Auroral Red Arcs Summary 1955 - 1965", E. Marovich, December 1966.

H. MISCELLANY

CONTENTS

These data are not the primary responsibility of the Solar-Terrestrial Physics disciplines, but because of close relationships to solar-terrestrial physics, are outlined here.

H.1 NOCTILUCENT CLOUDS

H.1 Responsibility for publication of noctilucent cloud data has been undertaken by the Meteorological Service of Canada.

For information on data available, contact:

Department of Transport
Meteorological Branch
Attn: Dr. A. D. Christie
315 Bloor Street West
Toronto 181, Canada

H.1 Observations were made at Mawson, Wilkes and Macquarie Island during February-April 1968 and 1969. Contact World Data Center-A, Boulder for information.

AT BOULDER

M I C R O F I L M:

1. IQSY (1964-1965) observations from the 202 stations of the Hydro-Meteorology Service of the USSR, the 7 stations of the All-Union Astronomical-Geodetical Society, and the station of the Institute of Physics and Astronomy of the Academy of Sciences, Estonian SSR, on 35 mm roll microfilm.

P U B L I C A T I O N S:

1. Geophysical Institute, University of Alaska, UAG-191, Summary of Noctilucent Cloud Data from Alaska, Canada, Greenland, Iceland and the Southern Hemisphere for the years 1885 - 1966.
2. Department of Transport, Meteorological Branch, Canada - Noctilucent Cloud Data for March - October, 1967; March - October, 1968 and March - October, 1969 from Alaska, Canada, Greenland, and Iceland.
3. IQSY Notes, IQSY Secretariat, London and STP Notes, National Academy of Sciences, Washington, D. C., Solar-Geophysical Data, NOAA - occurrences of noctilucent clouds over the N. Atlantic and western Europe in the abbreviated Calendar Records.
4. World Meteorological Organization, WMO-No. 250, TP. 138. "International Noctilucent Cloud Observation Manual".

H.2 METEOROLOGICAL ROCKETS

The Meteorological Rocket Data Reports, issued monthly by World Data Center A for Meteorology, start with January 1964 data. Each report contains the wind and temperature measurements from all available meteorological sounding rocket firings for that particular month, along with computed values for pressure, density, and speed of sound. It also includes the local radiosonde observations nearest the time of firing. Release time of the radiosonde should be within ±6 hours of the time of firing. However, exceptions up to ±12 hours are made, particularly in tropical regions. Since only those firings which yield significant data are of interest here, the report does not include unsuccessful firings. Prior to January 1966, only data from stations cooperating in the current Meteorological Rocket Network (MRN) are available. Thus these first issues of the Meteorological Rocket Data Reports are essentially a reprint of the Data Report of the Meteorological Rocket Network Firings, IRIG Document 109-62, issued by the Meteorological Rocket Network Committee (MRNC). Other countries are encouraged to submit their observations to WDC-A for inclusion in this series. Meteorological Rocket Network Stations which have contributed data are listed in an addendum. Any data delayed and thus omitted from previous publications will appear in a second addendum.

The current Meteorological Rocket Network (MRN) combines the efforts of a number of meteorological organizations engaged in observations and studies of the upper atmosphere. The MRNC has played an active role in coordinating the planning, implementation, processing, and publication of the data acquired under the auspices of the MRN. Background information relative to the development of the MRN, the techniques employed, and the participants, is contained in IRIG Document 111-64, first published in February 1965. Familiarization with this document is urged as the details involved in the collection and reduction of MRN data are numerous and cannot be given in each data report. Additional information concerning computer techniques used in data reduction should be referred to the individual contributors.

Data gathered by the Meteorological Rocket Network prior to 1965 were uniformly reduced by United States Army Electronics Research and Development Activity, White Sands Missile Range, New Mexico, using graphical techniques. Beginning with the 1965 data, initial reduction is the responsibility of each contributing station. This change has been brought about primarily because the radar plots once used as a basis for all reduction are no longer available. Under this new reduction procedure, several of the MRN sites will be reducing wind data from digital radar position tapes using high-speed computers. The advantages in this method are obvious. The only change in the presentation of the data will be in the manner in which the position times are reported. Beginning with data for July 1965 fall rate is calculated for the user's convenience. Thus columns 16, 17, and 18 which formerly denoted time after firing in relation to altitude, now denote fall rate in whole meters per second.

A brief monthly summary has been initiated beginning with the 1965 data reports. This summary, found immediately before the addendum, is designed to compare the mean profile for the current month with long-term means for the same month. It is hoped that this summary will prove of value to the user and that its scope can be increased with time.

These World Data Center A Meteorology Data Reports "High Altitude Meteorological Data" (formerly Meteorological Rocket Network Firings) are published by, and are for sale through, the National Climatic Center, Asheville, North Carolina, U.S.A. 28801, Attn: Publications. The subscription price is $36.00 per year; $9.00 additional for foreign mailing; $3.00 single copy. Checks and money orders should be made payable to: Department of Commerce, NOAA.

H.3 OZONE

The ozone data from observations at ground stations throughout the world are published by the Department of Transport, Meteorological Branch, of Canada in cooperation with the World Meteorological Organization. There is a "Catalogue of Published Data up to the End of 1966, Index No. 2" available from: Director, Meteorological Service of Canada, 315 Bloor Street West, Toronto 181, Ontario, Canada.

For information on ozone data including that available from ozonesondes contact World Data Center-A, Meteorology, National Weather Records Center, Asheville, North Carolina, U.S.A. 28801.

Publication Notice

WORLD DATA CENTER A for SOLAR-TERRESTRIAL PHYSICS REPORT UAG
(Prepared by World Data Center A for Solar-Terrestrial Physics, NOAA, Boulder, Colorado)

These reports are for sale through the National Climatic Center, Federal Building, Asheville, NC 28801, Attn: Publications. Subscription price: $9.00 a year; $2.50 additional for foreign mailing; single copy price varies. These reports are issued on an irregular basis with 6 to 12 reports being issued each year. Therefore, in some years the single copy rate will be less than the subscription price, and in some years the single copy rate will be more than the subscription price. Make checks and money orders payable to: Department of Commerce, NOAA.

Upper Atmosphere Geophysics Report UAG-1, "IQSY Night Airglow Data" by L. L. Smith, F. E. Roach and J. M. McKennan of Aeronomy Laboratory, ESSA Research Laboratories, July 1968, single copy price $1.75.

Upper Atmosphere Geophysics Report UAG-2, "A Reevaluation of Solar Flares, 1964-1966" by Helen W. Dodson and E. Ruth Hedeman of McMath-Hulbert Observatory, The University of Michigan, August 1968, single copy price 30 cents.

Upper Atmosphere Geophysics Report UAG-3, "Observations of Jupiter's Sporadic Radio Emission in the Range 7.6-41 MHz, 6 July 1966 through 8 September 1968" by James W. Warwick and George A. Dulk, Department of Astro-Geophysics, University of Colorado, October 1968, single copy price 30 cents

Upper Atmosphere Geophysics Report UAG-4, "Abbreviated Calendar Record 1966-1967" by J. Virginia Lincoln, Hope I. Leighton and Dorothy K. Kropp, Aeronomy and Space Data Center, Space Disturbances Laboratory, ESSA Research Laboratories, January 1969, single copy price $1.25.

Upper Atmosphere Geophysics Report UAG-5, "Data on Solar Event of May 23, 1967 and its Geophysical Effects" compiled by J. Virginia Lincoln, World Data Center A, Upper Atmosphere Geophysics, ESSA, February 1969, single copy price 65 cents.

Upper Atmosphere Geophysics Report UAG-6, "International Geophysical Calendars 1957-1969" by A. H. Shapley and J. Virginia Lincoln, ESSA Research Laboratories, March 1969, single copy price 30 cents.

Upper Atmosphere Geophysics Report UAG-7, "Observations of the Solar Electron Corona: February 1964-January 1968" by Richard T. Hansen, High Altitude Observatory, Boulder, Colorado and Kamuela, Hawaii, October 1969, single copy price 15 cents.

Upper Atmosphere Geophysics Report UAG-8, "Data on Solar Geophysical Activity October 24-November 6, 1968", Parts 1 and 2, compiled by J. Virginia Lincoln, World Data Center A, Upper Atmosphere Geophysics, ESSA, March 1970, single copy price (includes Parts 1 and 2) $1.75.

Upper Atmosphere Geophysics Report UAG-9, "Data on Cosmic Ray Event of November 18, 1968 and Associated Phenomena" compiled by J. Virginia Lincoln, World Data Center A, Upper Atmosphere Geophysics, ESSA, April 1970, single copy price 55 cents.

Upper Atmosphere Geophysics Report UAG-10, "Atlas of Ionograms" edited by A. H. Shapley, ESSA Research Laboratories, May 1970, single copy price $1.50

Upper Atmosphere Geophysics Report UAG-11, "Catalogue of Data on Solar-Terrestrial Physics", compiled by J. Virginia Lincoln and H. Patricia Smith, World Data Center A, Upper Atmosphere Geophysics, ESSA, June 1970, single copy price $1.50.

Upper Atmosphere Geophysics Report UAG-12, "Solar-Geophysical Activity Associated with the Major Geomagnetic storm of March 8, 1970", Parts 1, 2 and 3, compiled by J. Virginia Lincoln and Dale B. Bucknam, World Data Center A, Upper Atmosphere Geophysics, NOAA, April 1971, single copy price (includes Parts 1-3) $3.00.

Upper Atmosphere Geophysics Report UAG-13, "Data on the Solar Proton Event of November 2, 1969 through the Geomagnetic Storm of November 8-10, 1969", compiled by Dale B. Bucknam and J. Virginia Lincoln, World Data Center A, Upper Atmosphere Geophysics, NOAA, May 1971, single copy price 50 cents.

Upper Atmosphere Geophysics Report UAG-14, "An Experimental Comprehensive Flare Index and its Derivation for 'Major' Flares 1955-1969", by Helen W. Dodson and E. Ruth Hedeman, McMath-Hulbert Observatory, University of Michigan, July 1971, single copy price 30 cents.

Upper Atmosphere Geophysics Report UAG-15, "Catalogue of Data on Solar-Terrestrial Physics", prepared by Research Laboratories, NOAA, Boulder, Colorado, July 1971, single copy price $1.50. (Supersedes Report UAG-11, June 1970.)

Upper Atmosphere Geophysics Report UAG-16, "Temporal Development of the Geographical Distribution of Auroral Absorption for 30 Substorm Events in each of IQSY (1964-65) and IASY (1969)" by F. T. Berkey, V. M. Driatskiy, K. Henriksen, D. H. Jelly, T. I. Shchuka, A. Theander and J. Yliniemi, September 1971, single copy price 70 cents.

Upper Atmosphere Geophysics Report UAG-17, "Ionospheric Drift Velocity Measurements at Jicamarca, Peru (July 1967 - March 1970)", by Ben B. Balsley, Aeronomy Laboratory, National Oceanic and Atmospheric Administration, Boulder, Colorado, and Ronald F. Woodman, Jicamarca Radar Observatory, Instituto Geofisico del Perú, Lima, Peru, October 1971, single copy price 35 cents.

Upper Atmosphere Geophysics Report UAG-18, "A Study of Polar Cap and Auroral Zone Magnetic Variations", by K. Kawasaki and S. I. Akasofu, Geophysical Institute, University of Alaska, June 1972, single copy price 20 cents.

Upper Atmosphere Geophysics Report UAG-19, "Reevaluation of Solar Flares 1967", by Helen W. Dodson and E. Ruth Hedeman of McMath-Hulbert Observatory, The University of Michigan, and Marta Rovira de Miceli, San Miguel Observatory, Argentina, June 1972, single copy price 15 cents.
