AUTHORSHIP

THE PRINCIPAL AUTHOR OF THIS PLANT LIST AND THE PRIMARY EXPERT RESPONSIBLE FOR THIS WORK'S SUBSTANTIVE CONTENT IS MR. ROY WOODBURY, BOTANIST IN RESIDENCE OF THE DEPARTMENT OF NATURAL RESOURCES AND BOTANIST AT THE DEPARTMENT OF BIOLOGY OF THE UNIVERSITY OF PUERTO RICO.

OTHER MEMBERS OF THE COMMITTEE, WHO ACTED IN AN ADVISORY AND SUPPORTIVE CAPACITY, INCLUDE HERBERT RAFFAELE AND MITCHELL FRAM, DEPARTMENT OF NATURAL RESOURCES; CARLOS RIOS, OFFICE OF SCIENTIFIC ASSESSMENT, ENVIRONMENTAL QUALITY BOARD; LEON LIEGEL, USDA-FOREST SERVICE; WILLIE CUMPIANO AND AURELIO SIERRA, USDA-SOIL CONSERVATION SERVICE; JOSE MARRERO, RETIRED FORESTER; AND JOHN WHELAN, NATURAL HISTORY SOCIETY OF PUERTO RICO.

PREFACE

In an effort to prepare a watchlist of rare and endangered plant species for Puerto Rico, the Soil Conservation Service consulted with agencies, organizations, and individuals and a committee was organized December 4, 1973, to accomplish this objective --a similar committee published a report of rare and endangered animal species of Puerto Rico.

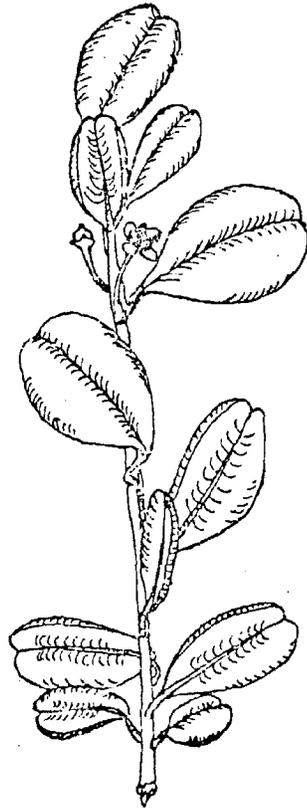

The Committee is greatly indebted to the USDA-Soil Conservation Service and agencies of the Commonwealth Government of Puerto Rico, particularly, the Department of Natural Resources, which so generously allowed their employees and consultants to participate.

The Committee also expresses its deepest appreciation to Miss Quirina Rivera, of the USDA-Soil Conservation Service, for her assistance in the preparation of this manuscript.

INTRODUCTION AND DEFINITIONS

Concern for vanishing species has traditionally focused on the animal kingdom, particularly, the higher orders of the animal kingdom. Toads and snails get scant attention; plants receive even less. Yet, we have come to realize that life is a web, no part of which is entirely independent. It is a concern for the integrity of the whole web of life, as well as the intrinsic value of individual plant species, that has drawn this committee together and is the spirit of this report. Our hope is that this document, probably the most comprehensive work yet assembled on endangered local plants of a region, will stimulate greater interest in the diverse and unique flora of Puerto Rico and will lead to a more effective protection of this natural heritage. We further hope that this publication will serve to stimulate works of a similar nature in other regions of the world.

The report contains a list of rare and endangered species, a discussion of causes of endangerment and endangered habitats, and recommendations for a plan of action. The species list is arranged in two general sections: those plants which are endangered and those considered rare. These sections, in turn, have been organized in groups of endemic and nonendemic plants.

No. 126

Introduction and Definitions (Con.)

Within each category of this text, the species are presented in alphabetical order by family. Under each family, plants are listed alphabetically by scientific names.

Although the arrangement generally connotes an order of priority, the reader should not conclude that the lowest priority is therefore not critical. The fact that a plant is nonendemic does not mean it can be found in abundance elsewhere. For some nonendemic species, the greatest number found anywhere in the world is the small endangered population found here in Puerto Rico (e.g.: *Cóbana negra*, *Stahliia monosperma*, though considered non-endemic in Puerto Rico, is only known outside the Island from a single collection in Hispaniola).

The list is long. This is the result of several factors: the Island has extraordinary plant diversity due to its proximity to Central and South America --the greatest centers of floral speciation in the world. Yet, as species became established or evolved in Puerto Rico, they filled limited niches on a very limited land mass. Their distribution was, thus, greatly restricted. A further factor in causing endangerment has been the increasing pressure of the Island's human population on plant habitats. This final factor is the one responsible for extensive additions to the list and is the only controllable one.

DEFINITIONS

THE FOLLOWING ARE THE DEFINITIONS USED IN THIS PUBLICATION:

R A R E --Those species which occur in small numbers, usually in a limited range or such restricted or specialized habitat that an increase in pressure on them or their habitat could cause their endangerment.

E N D A N G E R E D --Species that are in immediate danger of extinction and are unlikely to survive without special protective measures. They usually occur in small numbers and have a specialized habitat or limited range.

E N D E M I C --A species of extremely limited range. In this list, it applies to species found only in Puerto Rico.

Quina

Antirhea sintenistii
No. 97

Definitions (Con.)

NON ENDEMIC --A species of broad range. In this list it applies to indigenous or native forms that occur outside Puerto Rico as well as on the Island.

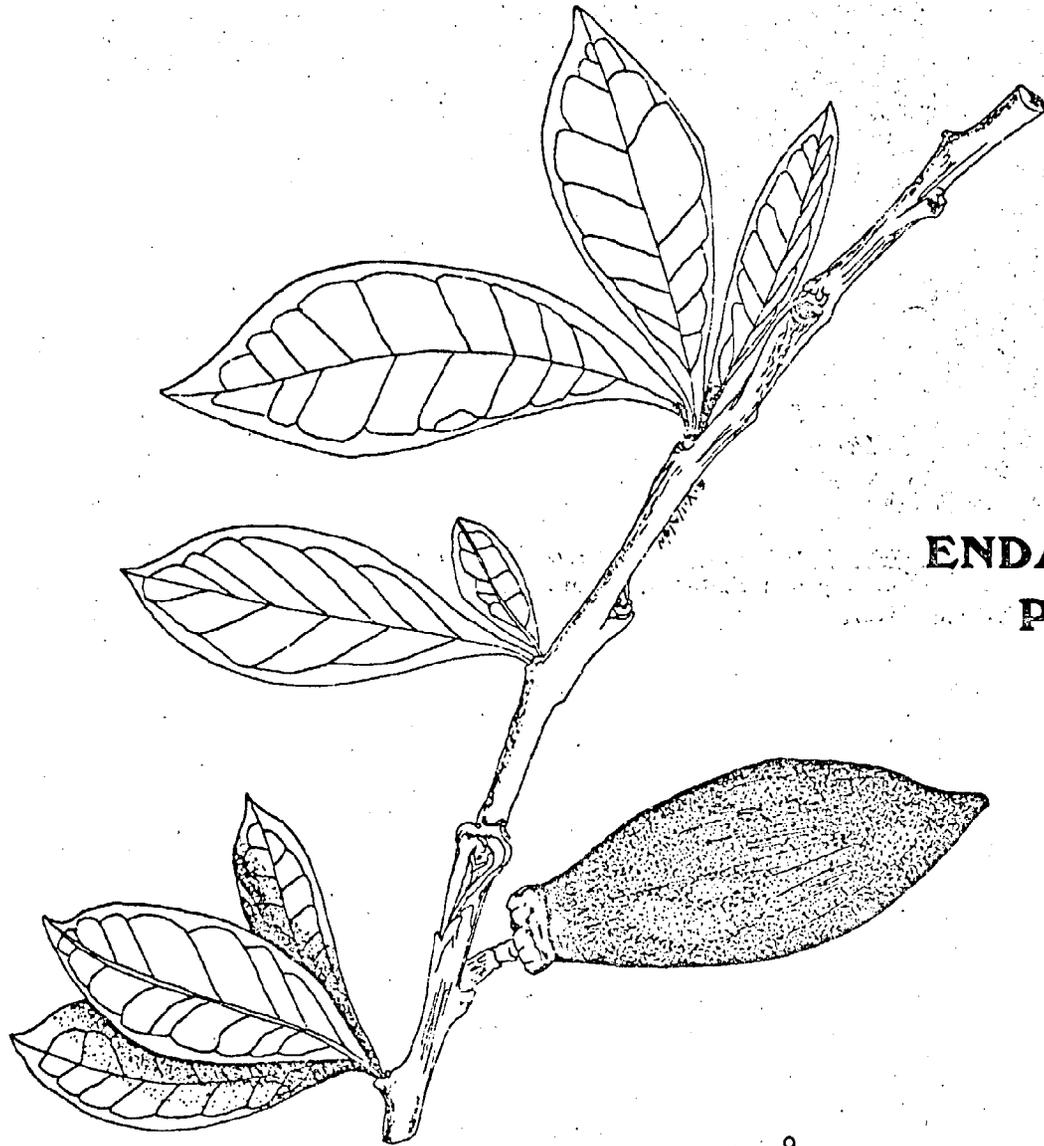

LIMITED DISTRIBUTION -- Refers to species with restricted ranges or those with scattered or local populations spread over large areas.

HABITAT DESTRUCTION -- The complete or partial alteration of a natural environment by man.

ENDANGERED ENDEMIC PLANT SPECIES OF PUERTO RICO

Page 11

NO.	SCIENTIFIC NAME	COMMON NAME	HABIT	DISTRIBUTION	CAUSE
1	ACANTHACEAE <u>Diapedium krugii</u>		Herb	Wooded slopes by Utuado and ravines near Coamo.	Habitat destruction
2	<u>Justicia borinquensis</u>		Herb	Open wooded areas of Monte Cerrote, Adjuntas.	Limited distribution
3	<u>Justicia culebritae</u>		Herb	Culebrita-wooded slopes.	Limited distribution
4	APOCYNACEAE <u>Plumeria portoricensis</u>	Alelí cimarrón Frangipani	Tree	Río Maricao. One collection.	Unknown
5	AQUIFOLIACEAE <u>Ilex cookii</u>	Té Holly	Tree	Limited to peaks and upper wet ridges of Toro Negro.	Limited distribution
6	ASCLEPIADACEAE <u>Cynanchium monense</u>		Herb vine	Rare on plateau of Mona.	Limited distribution
7	<u>Marsdenia elliptica</u>		Herb vine	One collection in mountain forests - Luquillo.	Unknown
8	BIGNONIACEAE <u>Crescentia portoricensis</u>	Higüero de sierra Calabash	Tree	Wet forests of upper Monte del Estado, Maricao.	Limited distribution
9	BORAGINACEAE <u>Heliotropium guanicense</u>	Cotorrilla Heliotrope	Shrub	Only in Punta Aguila, Cabo Rojo.	Limited distribution
10	BROMELIACEAE <u>Tillandsia lineatispica</u>	Pifión	Epiphyte	On rocks and bases of trees of Vieques and Culebra.	Limited distribution
11	CACTACEAE <u>Harrisia portoricensis</u>	Higo chumbo	Tree	Being attacked by the larva of the Cactus moth. Restricted to Mona, Monito, and Desecheo.	Cactus moth and limited distribution

Page 12

NO.	SCIENTIFIC NAME	COMMON NAME	HABIT	DISTRIBUTION	CAUSE
12	CACTACEAE (Con.) <u>Leptocereus quadricostatus</u>	Sebucán	Tree	Limited to southwestern Puerto Rico.	Limited distribution
13	<u>Opuntia borinquensis</u>	Olaga	Shrub	Morrillos de Cabo Rojo.	Habitat destruction
14	CANELLACEAE <u>Pleodendron macranthum</u>	Chupagallo	Tree	Very rare on moist-to-wet western slopes of the Luquillo Mountains.	Limited distribution
15	CANNACEAE <u>Canna pertusa</u>	Maraca	Shrub	Along banks and streams - central and western mountains.	Limited distribution
16	CASSIACEAE <u>Caesalpinia culebrae</u>	Mato amarillo Smooth yellow nicker	Woody vine	Sandy beaches of Culebra.	Limited distribution
17	<u>Caesalpinia monensis</u>	Mato negro Black nicker	Tree	Plateau of Mona.	Limited distribution
18	<u>Caesalpinia portoricensis</u>	Mato Brown nicker	Woody vine	Beaches of Guánica.	Limited distribution
19	<u>Cassia exunguis</u>	Tamarindillo	Shrub	Open slopes - Coamo area.	Habitat destruction
20	<u>Cassia mirabilis</u>		Shrub	Moist sand, Dorado and Tortuguero.	Habitat destruction
21	GELASTRACEAE <u>Maytenus elongata</u>	Cuero de sapo	Tree	Scattered in moist areas from El Verde, Luquillo, to Monte del Estado, Maricao.	Limited distribution
22	<u>Maytenus ponceana</u>	Cuero de sapo	Tree	A small tree of moist areas near Florida and Río Portugués (north of Ponce).	Habitat destruction and limited distribution
23	COMPOSITAE <u>Eupatorium droserolepis</u>	Oreganillo	Shrub	Summits of Central Cordillera.	Habitat destruction

ENDANGERED ENDEMIC PLANT SPECIES OF PUERTO RICO

Page 13

NO.	SCIENTIFIC NAME	COMMON NAME	HABIT	DISTRIBUTION	CAUSE
24	COMPOSITAE (Con.) <u>Mikania stevensiana</u>	Guaco	Slender vine	Ravines - Monte del Estado, Maricao.	Limited distribution
25	CONVOLVULACEAE <u>Ipomoea krugii</u>	White morning glory	Slender vine	Marshes of western Puerto Rico.	Habitat destruction
26	<u>Ipomoea palustris</u>	Bejuco de puerco Morning glory	Slender vine	Swamps in siliceous sand - Bayamón principally, also Dorado and Tortuguero.	Limited distribution and habitat de- struction
27	CUCURBITACEAE <u>Anguria cookiana</u>	Algodoncillo	Slender vine	Ravine north of Coamo.	Habitat destruction
28	CYATHEACEAE <u>Cyathea dryopteroides</u>	Helecho	Shrub	Upper forests - Central Cordillera.	Habitat destruction
29	EHRETACEAE <u>Cordia bellonis</u>		Shrub	Wet serpentine forests - Maricao.	Limited distribution
30	<u>Cordia wagnerorum</u>		Shrub	Wet mountain ridges - Luquillo.	Limited distribution
31	CYPERACEAE <u>Cyperus urbani</u>		Sedge	Very rare in Coamo area and Vieques on grassy slopes.	Limited distribution
32	<u>Scleria doradoensis</u>		Sedge	Marshy areas - Tortuguero and Dorado.	Habitat destruction
33	<u>Scleria stevensiana</u>		Sedge	One collection in swamp near Lares. Not recently seen.	Unknown
34	EUPHORBIACEAE <u>Chamaesyce monensis</u>	Lechecillo	Herb	Rare on Mona plateau.	Limited distribution

ENDANGERED ENDEMIC PLANT SPECIES OF PUERTO RICO

Page 14

NO.	SCIENTIFIC NAME	COMMON NAME	HABIT	DISTRIBUTION	CAUSE
35	EUPHORBIACEAE (Con.) <u>Croton impressus</u>	Croton	Shrub	Very local on moist serpentine mountain slopes.	Habitat destruction
36	<u>Hyeronima olusioides</u>	Cedro macho	Tree	Good wood. Moist hills and mountain forests - central and western Puerto Rico.	Lumbering and limited distribution
37	FLACOURTIACEAE <u>Banara portoricensis</u>	Palo de Ramón	Tree	Higher moist areas of the Central Cordillera.	Limited distribution
38	<u>Banara vanderbiltii</u>		Tree	Very rare in moist limestone hills near Bayamón. Only a few trees known.	Limited distribution
39	<u>Xylosma pachyphyllum</u>		Tree	Higher elevations in Monte del Estado, Maricao.	Limited distribution
40	<u>Xylosma schwaneckeanum</u>	Palo de candela	Tree	Of wet to moist slopes in Carite and El Verde.	Limited distribution
41	GESNERIACEAE <u>Gesneria pauciflora</u>		Herb	Upper mountain drainage areas of Monte del Estado.	Limited distribution
42	GRAMINEAE <u>Aristida portoricensis</u>	Pelos del diablo Triple-awned grass	Grass	Serpentine slopes of western Puerto Rico.	Limited distribution
43	<u>Panicum stevensianum</u>		Grass	Margin of Tortuguero Lake only.	Very limited distribution
44	ICACINACEAE <u>Ottoschulzia rhodoxylon</u>	Palo de rosa	Tree	Very rare - found near Mayaguez.	Unknown
45	LYCOPODIACEAE <u>Lycopodium portoricensis</u>	Club moss	Herb	Wet banks in Luquillo Mountains.	Limited distribution

NO.	SCIENTIFIC NAME	COMMON NAME	HABIT	DISTRIBUTION	CAUSE
46	LORANTHACEAE <u>Dendropemon sintenisii</u>	Hicaquillo Mistletoe	Epiphyte	One collection near Aibonito.	Limited distribution
47	MAGNOLIACEAE <u>Magnolia portoricensis</u>	Jagüilla	Tree	Virgin wet forest of Central Cordillera. Wet central mountain ridge.	Habitat destruction
48	<u>Magnolia splendens</u>	Laurel sabino	Tree	Excellent wood. Limited to wet, middle and upper regions of Luquillo Mountains.	Lumbering, slow reproduction
49	MALPIGHACEAE <u>Byrsonima horniana</u>	Maricao cimarrón	Tree	Very rare and local on moist slopes of western Puerto Rico.	Habitat destruction
50	<u>Byrsonima ophiticola</u>	Maricao cimarrón	Tree	Of moist slopes and scattered distribution in western Puerto Rico.	Habitat destruction
51	<u>Byrsonima wadsworthii</u>	Almendrillo	Tree	Few in numbers widely scattered in wet mountains at middle to high elevations.	Unknown
52	<u>Malpighia shaferi</u>	Olaga	Tree	Only in moist ravines on Vieques. Pasture destroying habitat.	Habitat destruction
53	MALVACEAE <u>Abutilon commutatum</u>	Terciopelo	Shrub	Thickets of Guánica.	Limited distribution
54	<u>Montezuma speciosissima</u>	Maga	Tree	Valuable wood of moist to wet woods and on roadsides.	Habitat destruction
55	MELASTOMACEAE <u>Clidemia umbrosa</u>	Camasey	Tree	Limited to Carite Forest at middle elevations in wet areas.	Limited distribution
56	<u>Henrietella membranifolia</u>	Camasey	Tree	Moist hills between Lares and Aguada.	Limited distribution
57	<u>Ossaea krugiana</u>	Camasey	Tree	Upper Central Cordillera.	Limited distribution

58	MELIACEAE <u>Trichilia triacantha</u>	Bariaco	Tree	Rare in dry southwestern Puerto Rico.	Limited distribution
59	MIMOSACEAE <u>Schrankia portoricensis</u>	Zarzarilla	Shrub	Dry to moist open forests - Coamo area.	Habitat destruction
60	MYRICACEAE <u>Myrica holdridgii</u>	Arrayán Wax-berry	Tree	Upper Luquillo Mountains.	Limited distribution
61	MYRSINACEAE <u>Grammadenia sintensisii</u>		Tree	Local in upper Luquillo Mountains.	Limited distribution
62	MYRTACEAE <u>Calyptranthes luquillensis</u>		Tree	Middle elevation wet areas of El Verde region of Luquillo Mountains.	Limited distribution
63	<u>Calyptranthes peduncularis</u>		Tree	Upper moist regions of Monte del Estado, Maricao.	Limited distribution
64	<u>Calyptranthes portoricensis</u>		Tree	Upper moist areas of Monte del Estado, Maricao.	Limited distribution
65	<u>Calyptranthes triflorum</u>		Tree	Upper moist regions of Monte del Estado, Maricao.	Limited distribution
66	<u>Calypptropsidium sintensisii</u>	Hoja menuda	Tree	Rare in wet upper forests of Luquillo Mountains.	Limited distribution
67	<u>Eugenia bellonis</u>		Shrub	Dry rocky slopes - Guánica and Caja de Muertos. Not well known.	Unknown
68	<u>Eugenia boqueronensis</u>		Tree	Coastal slopes. Not well known.	Unknown
69	<u>Eugenia corozalensis</u>		Tree	Limestone hills - Corozal. Not well known.	Unknown

70	MYRTACEAE (Con.) <u>Eugenia eggersii</u>	Guasávara	Tree	Very rare at middle to higher elevations.	Limited distribution
71	<u>Eugenia fajardensis</u>		Tree	Moist forest, Fajardo. Not well known.	Unknown
72	<u>Eugenia haematocarpa</u>		Tree	Wet middle areas of El Verde, Luquillo.	Limited distribution
73	<u>Eugenia margarettae</u>		Tree	Upper wet regions of Toro Negro.	Limited distribution
74	<u>Eugenia serrasuela</u>	Serrasuela	Tree	Collected by Bello near Anones, Las Marías. Not well known.	Unknown
75	<u>Eugenia underwoodiana</u>		Tree	Moist hills near Yauco.	Limited distribution and habitat destruction
76	<u>Marlierea sintenisii</u>	Murta	Tree	Upper wet ridges in the Luquillo Mountains.	Limited distribution
77	<u>Myrcia pagani</u>	Ausí	Tree	Western moist limestone hills.	Habitat destruction
78	OLACACEAE <u>Schoepfia arenaria</u>	Araña	Tree	Moist hills of the north coast.	Habitat destruction
79	OLEACEAE <u>Linociera holdridgii</u>	Hueso prieto	Tree	Local in dry forests of Guánica and Susúa, Yauco.	Limited distribution
80	ORCHIDACEAE <u>Brachionidium ciliatum</u>		Epiphyte	Mossy forest - East Peak area of Luquillo Mountains.	Limited distribution
81	<u>Epidendrum krugii</u>		Epiphyte	Southwestern areas.	Collecting and limited distribution

82	ORCHIDACEAE (Con.) <u>Epidendrum lacerum</u>		Epiphyte	Monte Cedro, thickets (Adjuntas). Not well known. Reported from Cuba.	Unknown
83	<u>Lepanthes dodiana</u>		Epiphyte	Upper eastern mountains, very local.	Limited distribution
84	<u>Lepanthes eltovensis</u>		Epiphyte	Upper Luquillo Mountains. Two locations only.	Limited distribution
	PALMACEAE				
85	<u>Aiphanes acanthophylla</u>	Coyure Ruffle palm	Tree	Of moist limestone hills. An understory palm of scattered distribution.	Limited distribution
86	<u>Calyptrogyne rivalis</u>	Manaca	Tree	Of moist limestone hills. Very rare and local, only two small colonies known.	Limited distribution
87	<u>Goussia attenuata</u>	Llume	Tree	Near the tops of moist limestone hills.	Limited distribution
88	<u>Sabal causiarum</u>	Palma de sobrero Puerto Rican hat palm	Tree	Mainly of western Puerto Rico near Ramey Base and Joyuda Lagoon, Mayagüez.	Harvesting and habitat destruction
	PAPILIONACEAE				
89	<u>Erythrina horrida</u>	Piñón espinoso Cockspur	Tree	Moist limestone hills of north coast.	Limited distribution
	PIPERACEAE				
90	<u>Peperomia wheeleri</u>	Peperomia	Herb	On forest rocks, Culebra.	Habitat destruction
	POLYGALACEAE				
91	<u>Polygala cowellii</u>	Palo de violeta Violet tree	Tree	Used for fences. Of wide distribution, but rare in dry-to-moist coastal hills.	Poor reproduction and lumbering
92	<u>Polygala portoricensis</u>		Tree	Upper dry slopes of Monte del Estado, Maricao.	Limited distribution
	POLYGONACEAE				
93	<u>Coccoloba rugosa</u>	Ortegón	Tree	In coastal hills of northeast and east coasts.	Habitat destruction and collection

NO.	SCIENTIFIC NAME	COMMON NAME	HABIT	DISTRIBUTION	CAUSE
157	ASCLEPIADACEAE <u>Oxypetalum cordifolium</u>		Herb vine	Recorded from Puerto Rico. Scattered in American tropics.	Limited distribution
158	BALANOPHORACEAE <u>Scybalium jamaicense</u>		Herb	Cerro Garzas, Adjuntas. Throughout Greater Antilles.	Very limited distribution
159	BIGNONIACEAE <u>Arrabidaea chica</u>		Woody vine	Forests of Bayamón Area. Also Trinidad and South America.	Limited distribution
160	BORAGINACEAE <u>Heliotropium antillanum</u>		Herb	One collection - coastal plain by Vega Baja. Also Cuba.	Limited distribution
161	BROMELIACEAE <u>Aechmea nudicaulis</u>		Epiphyte	Rocks and bases of trees near Punta Picúa, Luquillo, and Garrochales, Barceloneta. Through tropical America.	Very limited distribution
162	<u>Guzmania erythrolepis</u>	Pirigallo	Epiphyte	On rocks and bases of trees on Monte Alegrillo, Maricao. Also Jamaica and Cuba.	Limited distribution
163	<u>Tillandsia araujei</u>		Epiphyte	One collection on dry mountain ridge south of Río Cuyón, Aibonito. Also Brazil.	Very local distribution
164	<u>Tillandsia juncea</u>		Epiphyte	One collection near Adjuntas. From Florida to South America.	Very limited distribution
165	<u>Tillandsia pruinosa</u>		Epiphyte	Rare in Susúa Forest, Yauco. Florida to Brazil.	Limited distribution
166	<u>Vriesia ringens</u>	Pirigallo	Epiphyte	Only two small locations in Luquillo Mountains. Lesser Antilles to South America.	Limited distribution
167	<u>Wittmackia lingulata</u>	Piña cortadora	Epiphyte	On rocks near Caguas. Also Lesser Antilles.	Limited distribution
168	BUXACEAE <u>Buxus citrifolia</u>		Tree	Moist forests - very local. Also Venezuela.	Limited distribution

ENDANGERED NONENDEMIC PLANT SPECIES OF PUERTO RICO

Page 31

NO.	SCIENTIFIC NAME	COMMON NAME	HABIT	DISTRIBUTION	CAUSE
169	BUXACEAE (Con.) <u>Buxus vahlia</u>		Tree	Very local in coastal limestone hills near Bayamón, Rincón, and Ponce. St. Croix and Jamaica (?). May be endemic. Requires more study.	Limited distribution
170	CACTACEAE <u>Opuntia moniliformis</u>	Tuna	Tree	Forest thickets of Desecheo and Mona. Also Hispaniola.	Cactus moth and limited distribution
171	CAPPARIDACEAE <u>Morisonia americana</u>	Palo de peo	Tree	Moist forests of Desecheo, Culebra, and Vieques. Also common in the Lesser Antilles.	Habitat destruction
172	CASSIACEAE <u>Caesalpinia bunduc</u>	Mato Yellow nicker	Woody vine	Coastal area near Isabela. Widespread in tropics.	Unknown
173	<u>Caesalpinia melanosperma</u>	Mato Black nicker	Woody vine	Mona coastal plain. Also Lesser Antilles.	Limited distribution
174	<u>Cassia bacillaris</u>	Cockrico bush	Woody vine	Lower Luquillo Mountains. Lesser Antilles to South and Central America.	Habitat destruction
175	<u>Stahlia monosperma</u>	Cóbana negra	Tree	Furniture wood. Margins of mangroves, southwestern and eastern coasts of Vieques. Also Hispaniola.	Limited distribution and lumbering
176	<u>Cymometra portoricensis</u>	Oregonillo	Tree	Moist limestone hills. Also Hispaniola.	Limited distribution and habitat destruction
177	CELASTRACEAE <u>Maytenus cymosa</u>		Tree	Coastal forests of eastern Puerto Rico. Also Lesser Antilles.	Limited distribution
178	CHENOPODIACEAE <u>Salicornia bigelowii</u>	Chifle Glasswort	Herb	Salt flat near Cabo Rojo. Widespread elsewhere.	Very limited distribution

ENDANGERED NONENDEMIC PLANT SPECIES OF PUERTO RICO

Page 32

NO.	SCIENTIFIC NAME	COMMON NAME	HABIT	DISTRIBUTION	CAUSE
179	COMMELINACEAE <u>Campelia zanonii</u>	Cohitre blanco	Shrub	Craggy mountain slopes - Coamo area. Greater Antilles, Central and South America.	Limited distribution
180	COMPOSITAE <u>Ambrosia tenuifolia</u>		Herb	Tortuguero - dry siliceous sand.	Habitat destruction
181	<u>Baccharis dioica</u>	Broom bush	Shrub	Coastal rocky slopes. Through West Indies.	Limited distribution
182	<u>Wedelia gracilis</u>		Herb	Reported from eastern Puerto Rico. Through Greater Antilles.	Limited distribution
183	CONVOLVULACEAE <u>Ipomoea carnea</u>	Gloria de la mañana Morning glory	Woody vine	Moist ravines, Coamo area and east. Scattered in West Indies, Central and South America.	Limited distribution
184	<u>Ipomoea horsfalliae</u>	Gloria de la mañana roja Red morning glory	Slender vine	Southern moist slopes in woodland. Also in Jamaica and cultivated in tropics. Of ornamen- tal value.	Collecting and limited distribution
185	<u>Ipomoea tricolor</u>		Slender vine	One collection near Mayaguez.	Limited distribution
186	CUCURBITACEAE <u>Anguria ottoniana</u>		Slender vine	One collection. Also Cuba, Tobago, and Venezuela.	Limited distribution
187	<u>Anguria trifoliata</u>		Slender vine	One collection. Also Hispaniola.	Limited distribution
188	CUSCUTACEAE <u>Cuscuta indecora</u>	Bejuco de Mona Dodder	Epiphyte	Shore of Lake Guánica. Widespread in American tropics.	Habitat destruction
189	CYATHEACEAE (Fern) <u>Cyathea brooksii</u>		Shrub	Upper western mountains. Through Greater Antilles.	Limited distribution

ENDANGERED NONENDEMIC PLANT SPECIES OF PUERTO RICO

Page 33

NO.	SCIENTIFIC NAME	COMMON NAME	HABIT	DISTRIBUTION	CAUSE
190	CYATHEACEAE (Con.) <u>Hemitelia escuaguensis</u>	Helecho arbóreo Tree fern	Tree	Wet Central Cordillera and western mountains. Also Venezuela.	Limited distribution
191	CYPERACEAE <u>Bulbostylis curassavica</u>	Junquillo	Sedge	Dry wooded areas - Guánica and Caja de Muertos. Through West Indies.	Limited distribution
192	<u>Bulbostylis junciformis</u>	Junquillo	Sedge	Dry-to-moist siliceous sand - Tortuguero. Also Lesser Antilles to South America.	Limited distribution
193	<u>Cyperus confertus</u>		Sedge	Local coastal plant of Cataño area. Of wide tropical distribution.	Very limited distribution
194	<u>Cyperus eggersii</u>		Sedge	High swampy areas from Guajataca to Lares. Through Greater Antilles.	Limited distribution
195	<u>Cyperus flavescens</u>		Sedge	Moist grassy areas in Dorado and Bayamón. Widespread in tropics.	Limited distribution
196	<u>Cyperus fuliginosus</u>		Sedge	Open areas on Icacos Cay, Pajardo. Florida and West Indies.	Limited distribution
197	<u>Cyperus nanus</u> var. <u>subtenuis</u>		Sedge	Only one collection near Yauco. Rare in Cuba and Jamaica.	Limited distribution
198	<u>Cyperus swartzii</u>		Sedge	Only two collections in Guánica and Peñuelas. Scattered in West Indies.	Limited distribution
199	<u>Cyperus unioloides</u>		Sedge	Wet grasslands - Only one collection near Lares. A little known species. Greater Antilles, Central and South America.	Unknown
200	<u>Cyperus virens</u>		Sedge	Swampy grassland west of Bayamón. Widespread in tropics and subtropics.	Habitat destruction
201	<u>Eleocharis fallax</u>	Junco	Sedge	Guánica Lake and one location in the Luquillo Mountains. Rare in the Greater Antilles.	Habitat destruction

ENDANGERED NONENDEMIC PLANT SPECIES OF PUERTO RICO

Page 34

NO.	SCIENTIFIC NAME	COMMON NAME	HABIT	DISTRIBUTION	CAUSE
202	CYPERACEAE (Con.) <u>Eleocharis pachystyla</u>	Junco	Sedge	Only one collection in wet siliceous sands of Dorado. West Indies to Central and South America.	Limited distribution
203	<u>Eleocharis radicans</u>	Junco	Sedge	One collection. Not recently seen. Local in tropical and temperate areas.	Unknown
204	<u>Hemicarpha micrantha</u>		Sedge	Local in siliceous sands of Tortuguero. Widespread in tropics and temperate regions.	Limited distribution
205	<u>Lagenocarpus guianensis</u>		Sedge	Low wet areas in siliceous sand of Dorado and Tortuguero. Lesser Antilles to South America.	Limited distribution
206	<u>Psilocarya nitens</u>		Sedge	Marshy areas about Lake Tortuguero. Subtropical to temperate United States.	Limited distribution
207	<u>Rhynchospora brachychata</u>		Sedge	Only one collection in Luquillo Mountains. A questionable species.	Limited distribution
208	<u>Rhynchospora filiformis</u>		Sedge	Reported from Puerto Rico. Not recently seen.	Unknown
209	<u>Rhynchospora hispidula</u>		Sedge	Recorded from Puerto Rico. Not recently seen.	Unknown
210	<u>Rhynchospora microcarpa</u>		Sedge	Rare in swamps of Tortuguero. Southern United States and West Indies.	Limited distribution
211	<u>Rhynchospora miliacea</u>		Sedge	Recorded from Puerto Rico. Not recently seen.	Unknown
212	<u>Rhynchospora odorata</u>		Sedge	One collection near Cataño Swamp. Greater Antilles and Southern United States.	Very limited distribution
213	<u>Rhynchospora oligantha</u>		Sedge	Wet grassy areas in the Luquillo Mountains, Tortuguero, and Dorado. Eastern United States and Greater Antilles.	Very limited distribution

ENDANGERED NONENDEMIC PLANT SPECIES OF PUERTO RICO

Page 35

NO.	SCIENTIFIC NAME	COMMON NAME	HABIT	DISTRIBUTION	CAUSE
214	CYPERACEAE (Con.) <u>Rhynchospora oligantha</u> var. <u>brevisetata</u>		Sedge	Wet grassy areas - upper Luquillo Mountains, Tortuguero, and Dorado. In Florida and the Greater Antilles.	Limited distribution
215	<u>Rhynchospora podosperma</u>		Sedge	Recorded from Puerto Rico. Not recently seen.	Unknown
216	<u>Rhynchospora rariflora</u>		Sedge	Wet grassy areas around Lake Tortuguero. In Florida and the Greater Antilles.	Limited distribution
217	<u>Rhynchospora rufa</u>		Sedge	Swamps of north coast - two collections. Also Cuba and South and Central America.	Limited distribution
218	<u>Scleria gracilis</u>	Nut-rush	Sedge	Wet grassy areas of Tortuguero. Southern United States and West Indies.	Limited distribution
219	<u>Scleria mitis</u>	Cortadora	Sedge	One collection in Bayamón. West Indies, Central and South America. Not recently seen.	Unknown
220	<u>Scleria pauciflora</u>	Nut rush	Sedge	Wet grassy areas of Tortuguero. Eastern United States and West Indies.	Limited distribution
221	DILLENACEAE <u>Dolioscarpus brevipedicellatus</u>		Woody vine	Very local in coastal moist forests of north coast.	Limited distribution
222	DROSERACEAE <u>Drosera capillaris</u>	Sundew	Herb	Wet siliceous sand. Canada to Brazil.	Habitat destruction
223	EHRETIACEAE <u>Bourreria revoluta</u>		Tree	Moist coastal woodland - Quebradillas. Greater Antilles to Florida.	Limited distribution
224	<u>Rochefortia acanthophora</u>	Juso	Tree	Southwestern Puerto Rico - Coastal forests. Through West Indies.	Habitat destruction
225	<u>Rochefortia cuneata</u>	Espino	Tree	One collection at La Plata, Guánica. West Indies.	Limited distribution

ENDANGERED NONENDEMIC PLANT SPECIES OF PUERTO RICO

Page 36

NO.	SCIENTIFIC NAME	COMMON NAME	HABIT	DISTRIBUTION	CAUSE
226	EUPHORBIACEAE <u>Chamaesyce anegadensis</u>		Herb	Very rare on rocky plateau of Mona. Also Anegada.	Limited distribution
227	<u>Chamaesyce cowelii</u>		Herb	Dry coastal rocky thickets of southwestern Puerto Rico, Caja de Muertos, and Mona. Also Anegada and Dominican Republic.	Limited distribution
228	<u>Croton nummulariaefolius</u>		Shrub	Very local in rocky coastal thickets - Guánica. Also Cuba and Hispaniola.	Limited distribution
229	<u>Drypetes ilicifolia</u>	Encinillo	Tree	Rare in moist coastal hills of the north coast. Also Jamaica.	Habitat destruction and limited distribution
230	FLACOURTIACEAE <u>Lunania buchii</u>		Tree	Forest of upper Monte del Estado. Also Hispaniola.	Limited distribution
231	<u>Prockia cruiz</u>		Tree	Very local in Vieques and southeastern Puerto Rico - moist forests. Through tropical America.	Habitat destruction
232	GENTIANACEAE <u>Enicostema verlicillatum</u>		Herb	Recorded from Puerto Rico. Not recently seen. West Indies and Old World tropics.	Limited distribution
233	<u>Schultesia brachyptera</u>		Herb	Only one collection in wet sand near Bayamón. Through Greater Antilles, Central and South America.	Limited distribution
234	GRAMINEAE <u>Andropogon dominicensis</u>	Barbas Beardgrass	Grass	Only along Río Maricao, Puerto Rico. Occurs west to Florida.	Limited distribution
235	<u>Aristida cognata</u>	Pelos del diablo Triple-awned grass	Grass	Rocky slopes near Boquerón. Rare in the Lesser Antilles, Jamaica, and the Bahamas.	Limited distribution
236	<u>Aristida spiciformis</u>	Pelos del diablo Triple-awned grass	Grass	Moist siliceous sandy areas of Tortuguero. Also scattered in the Isle of Pines (Cuba), and Florida.	Limited distribution

ENDANGERED NONENDEMIC PLANT SPECIES OF PUERTO RICO

512	<u>Lippia stoechadifolia</u>	Poleo	Shrub	Margins of swamps and lakes. Widespread elsewhere.	Used in medicine and limited distribution
513	ZINGIBERACEAE <u>Costus macrostrobilus</u>	Cana de India Costus	Shrub	Mountain slopes. Also Trinidad.	Limited distribution
514	ZYGOPHYLLACEAE <u>Guaiacum officinale</u>	Guayacán Common lignumvitae	Tree	Good wood. Dry south coast. Through West Indies, Central and South America.	Lumbering
515	<u>Guaiacum sanctum</u>	Guayacán blanco Holywood lignumvitae	Tree	Dry forests, southwestern Puerto Rico. Good wood, nearly exterminated. Greater Antilles, Yucatán, and Florida.	Lumbering

Stahlia monosperma, Cóbana negra
Number 175--Endangered Nonendemic Plant
Species of Puerto Rico.

CAUSES OF ENDANGERMENT

A. DESTRUCTION OR DISTURBANCE OF HABITATS

1. Upland/Montane Habitat (above 1000-foot elevation)

Remoteness, relative inaccessibility, and government ownership have tended to result in less intense land use pressure on upper montane areas. However, many of these habitats have been heavily logged, cleared for pasture or housing, or otherwise disturbed. The higher peaks and ridges are especially vulnerable. For example, in the past two years, highway and communications tower construction have destroyed large areas of elfin and upper montane woodland in Carite State Forest and Cerro de Punta. Activities of this type can be expected to increase, aggravating the problem.

2. Moist Limestone Hills (below 1000-foot elevation, noncoastal)

Very little natural forest of this type remains in Puerto Rico due to intensive agricultural land usage. Presently, urban development is increasing in this zone. The remaining natural forest is found primarily in the limestone karst topography of northwestern Puerto Rico.

3. Coastal Habitats

Coastal habitats, other than mangrove, have been practically obliterated in Puerto Rico. These include fresh-water swamps and a variety of forest types. Rapid urban, recreation and tourist developments threaten the few remaining small patches of such habitats. Aside from land use pressure, the remaining swamps are also vulnerable to changes in their delicate water balance. Mangroves, while still numbering several thousand acres, have been reduced by over 75 percent since the arrival of the Spaniards to Puerto Rico, and could thus qualify as an endangered habitat.

4. Island

Most of the islands surrounding Puerto Rico have been heavily disturbed by intensive agricultural use and military operations. These pressures, combined with the prospects of industrial and urban developments, will create an increasingly severe stress on the flora of our offshore islands.

Causes of Endangerment (Con.)

B. EXTREMELY LIMITED NATURAL RANGE AND OTHER ENVIRONMENTAL STRESSES

Limited natural range in an uninhabited region is not a strong cause for alarm, except for the potential threat of natural catastrophes. However, on an island as heavily populated as Puerto Rico, there are few localities safe from possible human intrusion. Plants in this category are subject to a swift demise possibly resulting from a single poorly placed develop-

ment. Stresses from herbicides, air pollution, and water contamination, which, in a broad sense are forms of habitat disturbance, are increasingly becoming threats to the balances of various plant communities. These factors, although they come from outside the plant community being analyzed, must receive increasing attention since they have a significant impact on the survival of certain plant species in the community and the nature of the community as a whole.

C. PLANT COLLECTING OR HARVESTING

While the controlled collecting or harvesting of plants can be compatible with their continued prosperity, overcollecting can cause severe damage to a species and even its extinction. Unfortunately, there is a tendency to collect all the plants of the desired species out of a single area, destroying the seeding stock, rather than harvesting a few plants from a series of localities. While the former procedure is less time consuming and more economical, in the short run it could have a disastrous impact on a highly desired plant species.

AREAS WHERE RARE AND ENDANGERED PLANT SPECIES OCCUR IN PUERTO RICO

Area Number	Area Where Rare and Endangered Plants Occur	Species Number in List
1	Luquillo Mountains	7, 14, 21, 30, 40, 45, 47, 51, 54, 60, 61, 62, 66, 70, 72, 76, 83, 84, 103, 106, 108, 113, 115, 116, 117, 118, 119, 121, 122, 126, 127, 134, 135, 136, 143, 145, 154, 157, 166, 174, 207, 213, 214, 230, 240, 251, 258, 259, 260, 261, 263, 266, 280, 294, 303, 309, 317, 318, 322, 329, 331, 354, 364, 367, 372, 391, 394, 397, 400, 403, 409, 412, 413, 414, 418, 420, 422, 423, 425, 428, 429, 431, 432, 437, 443, 460, 461, 463, 464, 465, 467, 468, 469, 489, 490, 493, 497, 510
2	Sierra de Cayey	40, 45, 48, 51, 54, 55, 70, 83, 103, 110, 127, 133, 136, 137, 143, 166, 258, 280, 303, 318, 320, 331, 365, 413, 418, 425, 434, 437, 443, 462, 463, 474, 478, 490, 493
3	Coamo and east	1, 19, 27, 31, 59, 91, 94, 95, 105, 111, 163, 179, 271, 279, 338, 339, 346, 386, 390, 401, 404, 419, 462, 474, 475, 477, 478, 507
4	Playa de Guayanés	93, 250, 291, 312, 477, 500, 501, 504, 507, 510
5	Campanillas, Toa Baja	38, 54, 78, 85, 87, 89, 91, 96, 97, 107, 131, 144, 159, 169, 176, 229, 311, 340, 380, 413, 415, 417, 460, 461, 462, 474, 475, 491

AREAS WHERE RARE AND ENDANGERED PLANT SPECIES OCCUR IN PUERTO RICO

Area Number	Area Where Rare and Endangered Plants Occur	Species Number in List
11	Cambalache Forest	54, 87, 89, 91, 131, 229, 415, 462, 479, 480
12	Quebradillas	54, 78, 79, 85, 89, 91, 107, 109, 128, 131, 144, 150, 168, 176, 223, 225, 229, 247, 265, 279, 298, 332, 333, 340, 347, 351, 352, 359, 413, 415, 417, 419, 441, 462, 474, 479, 480, 487, 488, 494
13	Guajataca Forest	29, 36, 54, 56, 77, 78, 85, 87, 89, 95, 96, 97, 107, 129, 130, 131, 144, 151, 156, 168, 194, 265, 279, 298, 309, 311, 340, 354, 413, 415, 417, 440, 441, 462, 473, 474, 475, 476, 478, 479, 480, 491, 494, 499, 502, 511, 512
14	Guilarte Forest	2, 5, 23, 28, 37, 45, 48, 51, 57, 70, 101, 130, 137, 153, 190, 254, 258, 288, 289, 308, 309, 394, 413, 414, 420, 422, 463, 478, 489, 492, 498
15	Susúa Forest	35, 42, 79, 91, 92, 104, 140, 165, 197, 242, 298, 332, 399, 441, 442, 480, 503, 505
16	Guánica Forest	9, 12, 18, 53, 58, 67, 68, 79, 81, 91, 98, 99, 100, 102, 124, 125, 132, 139, 141, 146, 191, 198, 201, 224, 227, 228, 237, 255, 272, 332, 345, 370, 371, 375, 383, 389, 405, 424, 439, 442, 487, 495, 509, 514, 515

AREAS WHERE RARE AND ENDANGERED PLANT SPECIES OCCUR IN PUERTO RICO

Area Number	Area Where Rare and Endangered Plants Occur	Species Number in List
17	Monte del Estado	4, 8, 15, 21, 23, 24, 25, 35, 36, 39, 41, 42, 45, 48, 51, 63, 64, 65, 80, 81, 92, 95, 104, 106, 118, 127, 129, 130, 131, 140, 142, 151, 162, 168, 189, 190, 230, 234, 238, 242, 243, 274, 256, 258, 265, 279, 285, 298, 301, 309, 310, 315, 319, 320, 321, 325, 326, 327, 330, 334, 349, 353, 361, 362, 372, 378, 385, 413, 422, 423, 433, 435, 438, 440, 441, 464, 475, 476, 480, 489, 491, 492, 494, 498, 499, 500, 503, 505, 506

RECOMMENDATIONS FOR A PLAN OF ACTION

It is recommended that the Department of Natural Resources implement the following plan of action, or one similar to it:

I. REDUCTION OF CAUSES OF ENDANGERMENT

The Department of Natural Resources should pursue a program for reducing the causes of endangerment of the rare and endangered species as shown in the report, with emphasis as follows:

A. HABITAT PRESERVATION AND MANAGEMENT

The key to protection of these species is the preservation and management of their habitat against destruction or development for other land uses. State forests known to support endangered species should have specific plans drawn up for the management of such species. Steps should also be taken to protect endangered forms lying outside the state forests through the creation of sanctuaries or natural areas with strictly enforced regulations and suitable protective buffer zones to minimize the threat of outside development, watershed deterioration, or pollutants on the site. New sanctuary areas should be considered for:

1. Forests of the Central Mountains and limestone hills
2. Lake Tortuguero and adjacent swamplands and areas of siliceous sand
3. Dry forest habitat in the southwest

Recommendations, etc. (Con.)

4. Off-shore islands such as Mona, Culebra, and Vieques
5. Other specific areas with unique plants (see map)

B. PLANT COLLECTING

In places where the taking of plants for ornamental or other uses has created such a pressure on the species as to make it rare or endangered, harvesting of that form should be regulated against; and measures to protect remaining specimens should be taken. Conspicuous examples of plants that need such protection are all the orchids and the Melon cactus (Cactus intortus), which is not yet on this list, but may soon be as a result of over collecting.

C. LUMBERING

The lumbering of species that have become rare or endangered should be curtailed. A plan to replant such trees should be considered.

D. RESEEDING

The Department of Natural Resources should consider developing a nursery program for the propagation and subsequent outplanting of endangered species. This might be done in conjunction with the Botanical Garden of the University of Puerto Rico.

Recommendations, etc. (Con.)

II. INFORMATION AND EDUCATION

The Department of Natural Resources should formulate and pursue an information and education program directed toward other government agencies, the schools and the general public of the facts and needs for preservation of the rare and endangered plant species of Puerto Rico.

III. MONITORING AND RESEARCH

Organized surveying and monitoring by the Department of Natural Resources should be initiated to keep track of the status of endangered species. Then, research--to some degree by the Department of Natural Resources and to a great extent by the universities--should be undertaken to provide data on factors controlling duplication and abundance, propagation techniques, etc. The data collected should be given wide dissemination.
