CRUISE REPORT¹

VESSEL: *Oscar Elton Sette*, Cruise OES-07-05 (OES-53)

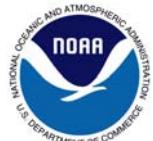

**CRUISE
PERIOD:** June 13–July 12, 2007

**AREA OF
OPERATION:** Northwestern Hawaiian Islands (Fig. 1)

**TYPE OF
OPERATION:** Personnel from the Pacific Islands Fisheries Science Center (PIFSC), National Marine Fisheries Service (NMFS), NOAA conducted lobster trapping and bottomfishing operations in the waters of the Northwestern Hawaiian Islands (NWHI).

ITINERARY:

- | | |
|------------|--|
| 13 June | Start of cruise. On board Michael Burns, Meaghan Darcy, Caleb Elrod, Margaret Flanagan, Matthew Iachhei, Garrett McNulty, Robert Moffitt, Christopher Monsour, Ryan Nichols, Christine Palmeri, and Justin Reinicke. Departed Pearl Harbor at 1600; started transit to Tern Island, French Frigate Shoals. |
| 15 June | Arrived at Tern Island and off-loaded supplies. Continued transit to Maro Reef. |
| 16 June | Arrived at Maro Reef; commenced lobster trapping operations in quad 4-7 at 1800. |
| 17-22 June | Continued lobster trapping and commenced bottomfishing operations. |

¹PIFSC Cruise Report CR-07-014
Issued 13 August 2007

23 June	Hauled lobster traps and departed Maro Reef; started transit to Necker Island.
25 June	Arrived at Necker Island and commenced lobster trapping and bottomfishing operations.
26-27 June	Continued lobster trapping and bottomfishing operations.
28 June	Hauled lobster traps and departed Necker Island; started transit to Lisianski Island in response to a request for a medical evacuation of Protected Species Division camper Jon Sprague.
30 June	Arrived at Lisianski Island. Embarked Jon Sprague and Angie Kaufman. Started transit to Midway Island.
1 July	Arrived at Midway Island at 1600. Disembarked Angie Kaufman. She will finish her field season at Midway. Jon Sprague on board until medivac flight arrives.
2 July	Disembarked Jon Sprague at 2330.
3 July	Departed Midway at 0800. Started return to Necker Island.
6 July	Arrived Necker Island. Commenced lobster trapping and bottomfishing operations.
7-9 July	Continued lobster trapping and bottomfishing operations.
10 July	Hauled lobster gear and headed towards Pearl Harbor, Oahu.
12 July	Arrived in Honolulu. End of cruise

MISSIONS AND RESULTS:

- A. Collected data on abundance and species composition of trap-captured lobster at two banks in the NWHI to compare with results of previously collected data.
1. A total of 1,158 spiny lobster, *Panulirus marginatus*; 2,624 slipper lobster, *Scyllarides squamosus*; 18 ridgeback slipper lobster, *S. haanii*; and 24 Chinese slipper lobster, *Parribacus antarcticus*, were caught in 196 lobster trapping stations (Table 1) conducted on adult lobster fishing grounds using black plastic (Fathom's Plus) lobster traps with a 1-by-2-in mesh. Each station consisted of a single string of traps. Strings were composed of either 8 or 20 traps, each separated by 20 fathoms of ground line. Traps were baited with 1.5-2.0 lb of cut mackerel and soaked overnight. Traps were generally set within one of two depth regimes: 10-20 or 20-35 fathoms.

2. Our total effort at Maro Reef was 1,118 trap-nights yielding a total of 955 spiny lobster, 2,458 slipper lobster, 7 ridgeback slipper lobster, and 8 Chinese slipper lobster. Catch rates of spiny lobster were moderate at Maro Reef, approximately 0.85 spiny lobster per trap-night for all depths and locations. This is up from the 2005 value of 0.68 and nearly identical to the 2006 value of 0.88. Catch rates of slipper lobster were high at approximately 2.20 slipper lobster per trap-night (down from 2002, 2003, 2004, 2005, and 2006 catch rates of 3.29, 3.22, 3.27, 2.38, and 2.26, respectively).

Current and historical catch rates for lobster (number per trap-night) at Maro Reef by quad are shown in Tables 2-3 below. All data presented below are based on gross catch rates and should not be interpreted as a thoroughly analyzed assessment.

3. Our total effort at Necker Island was 1,111 trap-nights yielding 203 spiny lobster, 166 slipper lobster, 11 ridgeback slipper lobster, and 16 Chinese slipper lobster. Catch rates of spiny lobster were very low at 0.18 lobster per trap-night (lower than the 2003, 2004, 2005, and 2006 catch rates of 0.44, 0.42, 0.34, and 0.30, respectively and considerably lower than the 2001 and 2000 catch rates of 0.71 and 0.83, respectively). The slipper lobster catch rate of 0.15 lobster per trap night was considerably lower than the 2004, 2005, and 2006 catch rates of 0.26, 0.27, and 0.30, respectively. It should be noted that due to a medical evacuation, several of our study sites were not visited. Since different study sites have varying historical lobster abundances, the 2007 catch rates may not be comparable to previous year's rates.

Current and historical catch rates for lobster (number per trap-night) at Necker Island by quad are shown in Tables 4-5 below. All data presented below are based on gross catch rates and should not be interpreted as a thoroughly analyzed assessment.

- B. Obtain length-frequency data on spiny and slipper lobsters to compare with those of previous years and to refine estimates of growth and mortality.

All lobster captured were sexed and measured. The presence or absence of eggs was recorded for all females. Data was returned to the Laboratory for computer entry and future analysis. Pleopod measurements were taken from nearly all female spiny lobster and slipper lobster. Data on the length of the female pleopod relative to carapace length will be used to estimate size at maturity for female spiny and slipper lobster. Current year's data can be compared to previously collected data to determine interannual variation in size at maturity for lobster populations.

- C. Record and release any tagged lobster at the capture location.

A total 7 tagged spiny and 5 tagged slipper lobster were caught and released at Necker and 34 tagged spiny and 114 tagged slipper lobster were caught and released at Maro Reef.

D. Conduct bottomfishing and collect biological data.

A total of 11 bottomfishing operations (Table 6) were conducted. A total of 68 ehu, *Etelis carbunculus*; 6 hapuupuu, *Epinephelus quernus*; 14 gindai, *Pristipomoides zonatus*; 7 kalekale, *Pristipomoides seiboldii*; 1 yellowtail kalekale, *Pristipomoides auricilla*; 10 kahala, *Seriola dumerili*; 1 nohu, *Pontinus macrocephalus*; 6 uku, *Aprion virescens*; 4 opakapaka, *Pristipomoides filamentosus*; and 2 Butaguchi, *Pseudocaranx dentex* were caught. An additional 31 uku, *Aprion virescens*, were caught using surface trolling gear. Length measurements were taken on all fish. Genetic samples, otolith, dorsal spine, and gonad samples were collected from selected fishes.

E. Collect spiny and slipper lobster for shore based morphometric and biological studies.

A total of 50 spiny and 50 slipper lobster were collected at Maro Reef, frozen, and returned to the Science Center for additional morphometric and biological studies. An additional 18 spiny and 17 slipper lobster were collected at Necker Island, frozen, and returned to the Science Center for these studies.

F. Collect genetic material from select crustacean and fish species (including from those bottomfish listed above).

Tissue samples from several species were collected and turned over to various investigators at the University of Hawaii for their on-going genetics projects. These samples included:

Species	# Necker	# Maro Reef
<i>Panulirus marginatus</i>	18	33
<i>Panulirus penicillatus</i>	0	1
<i>Scyllarides squammosus</i>	2	18
<i>Scyllarides haanii</i>	11	6
<i>Calcinus laurentae</i>	2	0
<i>Dardanus sanguinocarpus</i>	1	0
<i>Unidentified pagurid</i>	1	0
<i>Gymnothorax steindachneri</i>	0	11
<i>Gymnothorax flavimarginatus</i>	0	10
<i>Gymnothorax meleagris</i>	2	0
<i>Gymnothorax eurostus</i>	0	1
<i>Gymnothorax albimarginatus</i>	0	6
<i>Gymnothorax berndti</i>	1	0
<i>Lutjanus kasmira</i>	27	2
<i>Aprion virescens</i>	26	11
<i>Epinephelus quernus</i>	0	3
<i>Etelis carbunculus</i>	3	2

Species	# Necker	# Maro Reef
<i>Pristipomoides auricilla</i>	1	0
<i>Pristipomoides seiboldii</i>	4	3
<i>Pristipomoides filamentosus</i>	1	3
<i>Pristipomoides zonatus</i>	2	11
<i>Pseudocaranx dentex</i>	1	1
<i>Pontinus macrocephalus</i>	1	0
<i>Synodus doaki</i>	1	0
<i>Melichthys vidua</i>	1	0

**SCIENTIFIC
PERSONNEL:**
