## 1. INTRODUCTION

One of the major environmental issues which currently concerns citizens is the condition of coastal and shorelines areas. This is particularly true of California which has 1,264 miles of ocean shoreline. There has been a recurring debate in the state over the question of what constitutes an appropriate balance between human use of the coastal areas and the preservation of natural conditions and limitation of ecological damage. The importance of these issues in California was underscored in November 1972, when the electorate approved the Coastal Zone Conservation Act Initiative. In doing so, the voters made California one of two states in the nation with a state-wide system of regulation for coastal development.\*

The Act created an overall State Coastal Zone Conservation Commission and six Regional Coastal Commissions which are made up of combinations of counties and cover all of the state's ocean coastline. The legislation gives these new units control over the development of the state's coast by establishing a "permit area" that covers all land from mean high tide to a line one thousand yards inland. The sections of the state over which the Regional Commissions have authority reflect a remarkable diversity in physical and socio-economic characteristics. They range from the Northern Coast Regional Coastal Commission composed of the sparsely populated counties of Del Norte, Humboldt, and Mendocino with 165,373 residents to the metropolitan complex included in South Coast Regional Commission which contains Los Angeles and Orange Counties having a total population of 8,462,421.

These new Regional Commissions have the immediate task of reviewing and approving or denying permit applications for virtually all developments or changes in existing land uses within the thousand yard zone. In addition, they have, along with the State Commission, the long-run responsibility of formulating a plan and guidelines for future development of a larger area extending five miles inland from the coast.

One important consequence of establishing a governmental agency, especially one with authority over a new set of boundaries, is to create a need for new kinds and amounts of data for decision-making. In both the issuing of development

---

\*The State of Washington legislature adopted a Shoreline Management Act in 1971 and it received voter approval in 1972.

permits and the long-term planning of the regions, the Commissions and interested members of the public face the problem of acquiring accurate and adequate data about the physical, biological, and socio-economic conditions within the coastal zone. Whether a judgment is being made about the immediate effects of a new building or the future ramifications of a complex facility, there is a need for greater information about the coastal area than presently exists or is easily available. This is particularly true about socio-economic data.

Research on the coastal zone, until quite recently, was directed toward physical and biological characteristics. Furthermore, census data and governmental reports normally have not been organized to allow the identification of socio-economic activities and patterns within coastal portions of cities and counties. A particular need exists in California to collect, organize, and present information in usable form about human activities and development patterns which can disclose similarities and differences between the coastal zone and the rest of a city or county and between one portion of the coast and another.

It is the purpose of this publication and a companion piece, An Atlas of Coastal Zone Socio-Economic Characteristics: Los Angeles County, to provide immediate and relevant information about selected socio-economic and housing characteristics of the coastal zone in Los Angeles County for the use of governmental agencies and members of the public. In addition, this report provides baseline data against which future development patterns can be compared and trends identified. Finally, it is hoped that the form of presentation will suggest a format for gathering and reporting socio-economic and housing data relevant to the coastal zone in other areas of the state and county. The remainder of Part I will outline the general organization of the report.

#### Data Items and Areal Coverage

This report is organized around two sets of variables. One relates to the socio-economic and housing characteristics of the one thousand yard permit zone strip within Los Angeles County. The other concerns how these characteristics are distributed among cities and county territory within the coastal zone. The data contained in Part III fall into the following four broad categories:

1. Demographic
2. Income
3. Housing
4. Education and Employment

The areal analysis involves the presentation of the data for five different administrative levels which can be thought of as nesting within each other. The largest is Los Angeles

County as a whole. All cities which have territory within the coastal zone represent the next set of units for which data are gathered. No city has all of its territory within the zone. Consequently, the third and primary level of description includes the portions (Coastal Places) of cities and county unincorporated territory governed by Los Angeles County that are within the one thousand yards under the Commission's jurisdiction. Fourth, census data are also provided for the major harbors of the county.\* Finally, in one case, the San Pedro District of Los Angeles City, information is presented for a larger section of the city than the permit area. This was done to provide an example of how the Census material can be used to analyze an area which extends beyond the one thousand yards boundary but is still closely related to the coast. Using Los Angeles City as an example, the nesting relationship of the areas for which data is organized can be depicted in the following way:

Figure I-1 Areal Relationship of Analysis Units

COUNTY OF LOS ANGELES

CITY OF LOS ANGELES  
(City with portion of coastline  
within its boundaries)

SAN PEDRO DISTRICT OF LOS ANGELES CITY

SAN PEDRO COASTAL PLACE  
(Portion of Los Angeles  
City within the 1000 yard boundary)

LOS ANGELES HARBOR  
(specialized activity node  
within the coastal place)

PACIFIC OCEAN

---

\*Because of their importance as specialized places within the coastal system, it was deemed desirable to provide data concerning areas immediately around the four major harbors in Los Angeles County. Since there was no convention for determining the boundaries and the area of the harbor, it was taken to be defined by the portions of census tracts which overlapped the permit zone and which contained a portion of the harbor.

|                          | Palos Verdes Estates |                       | Palos Verdes Estates   |                |
|                          | Long Beach           |                       | Long Beach             | Long Beach     |

\*The City of Rancho Palos Verdes was incorporated after the basic computer analysis of Census data was made for this study. However, the boundaries of the city are almost identical with those of the area identified as Palos Verdes Peninsula-LACO in this report.

\*\*The fourth major harbor facility in the county, Marina del Rey, is listed as the coastal place Marina del Rey-LACO.

\*\*\*Combines the San Pedro and Wilmington areas of Los Angeles City.

There are 32 specific places for which socio-economic and housing characteristics are presented in Part III. These include the County, the coastal zone, nine cities,\* one city district, and three harbors. A list of these areas is included in Table I-1. On the following pages are maps of the coastal portion of Los Angeles County showing the spatial location of each place.

The data have been broken down in this areal form on the assumption that it will be useful for public officials and citizens to be able to obtain demographic, income, housing, and education and occupation information about specific places in the coastal zone which relate to the existing governmental structure and to make comparisons of the characteristics of:

1. coastal places in a city or unincorporated territory with the coastal zone as a whole;
2. coastal places within cities or unincorporated territory with each other;
3. one city's coastal places with the city as a whole; and
4. one city's coastal places, unincorporated coastal places or the coastal zone as a whole with the County as a whole.

Using the format provided, for example, it is possible to compare such things as: the median income of the residents of Pacific Palisades-LACY with the coastal zone as a whole; the housing values of the Torrance coastal place with those of adjacent Palos Verdes Estates coastal place; the number of residents over 65 years of age in the Santa Monica City coastal place with the City as a whole; or the percentage of Black residents in the coastal zone with the percentage for the county as a whole.

#### Summary Characteristics of the Coastal Zone

It is useful at this point to provide an overall picture of the coastal zone. This can be done with a summary table of selected socio-economic and housing characteristics which allows one to look at and make general comparisons among the coastal places and harbors, the cities of which they are

---

\*The City of Rancho Palos Verdes was incorporated after the basic computer analysis of Census data was made for this study. However, the boundaries of the city are almost identical with those of the area identified as Palos Verdes Peninsula-LACO in this report.

| Long Beach                         | 358,633              | 5.3              | 7.3                            | 35.6          | 6,786                      | 8.2                         | 22,983                     | 99                         | 1.5                           | 3.6                         | 2.8                                 |
| Long Beach Coast                   | 51,754               | .3               | 4.9                            | 49.2          | 5,743                      | 7.0                         | 32,479                     | 98                         | 1.0                           | 2.9                         | 2.1                                 |
| Long Beach Harbor                  | 677                  | 3.4              | 5.8                            | 37.1          | 2,621                      | 26.2                        | --                         | 67                         | 1.0                           | 1.4                         | <1.0                                |

part, and the county as a whole. While the data in Part III includes additional variables and a greater range of comparisons, a reasonably clear understanding of coastal patterns can be obtained from the figures presented here.

A quick survey of the Table 1-2 shows that, in comparison with the County as whole, the coastal zone has: considerably fewer Negroes and persons of Spanish heritage; an older population with a higher median family income; and considerably higher values for houses and rent. At the same time, it can be seen that there is no uniformity in these characteristics from one coastal place to another. For example, only in the Venice Coast-LACY, San Pedro-LACY, and Santa Monica coastal places is more than one percent of the population Black. In general, Spanish heritage residents are more widely distributed among coastal places but their population proportions still range from highs of 29.6 and 20.1 percent in the San Pedro and Venice areas to lows of 2.8 and 3.5 percent in Palos Verdes Estates and Los Angeles County Tract 6202-LACO. The most dramatic differences in the table are found in an interrelated set of variables dealing with family income and housing, as indicated in the following figures:

Table 1-3 Income and Housing Contrasts

| <u>Coastal Place</u>        | <u>Median<br/>Family<br/>Income</u> | <u>Median<br/>Housing<br/>Values</u> | <u>Median<br/>Contract<br/>Rent</u> | <u>Median<br/>Rooms per<br/>Unit</u> |
|-----------------------------|-------------------------------------|--------------------------------------|-------------------------------------|--------------------------------------|
| Palos Verdes Estates        | \$23,938                            | >\$50,000                            | \$296                               | 6.4                                  |
| Palos Verdes Penin-<br>sula | 21,237                              | >50,000                              | >300                                | 6.1                                  |
| Venice                      | 8,388                               | 21,193                               | 102                                 | 2.8                                  |
| San Pedro                   | 8,803                               | 22,965                               | 79                                  | 3.5                                  |

It is important to note, before ending this section, that the data presented in Part III is representative of one point in time - 1970. The report does, however, serve the important function of providing a systematic picture of the coastal zone and its relationship to municipalities having ocean shorelines and to the County as a whole, based on the most current information available. Furthermore, the tables provide a benchmark against which future conditions can be compared; they offer a format which can be used for comparison with 1960 or earlier Census data; and they are set up in such a way that readers can use information in the tables to make additional comparisons or analysis of interest to them.

## II DESIGN OF DATA TABLES AND DEFINITIONS OF SOCIO- ECONOMIC AND HOUSING CHARACTERISTICS

This Section contains a brief description of the way in which the tables are organized and discusses how certain of the data items are defined in Part III. Part IV contains technical information concerning the sources of data in the report, the method used to fit census tracts to the 1,000 yard boundary and a list of the census tracts overlapping or contained within the permit area used in the tabulations.

### Arrangement of Table Columns

Mention was made in Part I of the nesting structure of the coastal places and the cities and county of which they are part. The tables are designed to reflect this relationship. Columns are located in relation to one another so that the data for a coastal place is next to the column containing figures for the municipality as a whole. The same is true of the arrangement of the columns for unincorporated coastal places and the county as a whole. An exception has been made with the subareas of the City of Los Angeles. The more northern coastal places in the City, Pacific Palisades, Venice, East Marina del Rey, and Playa del Rey are separated by columns for Santa Monica City and Santa Monica coastal place from the San Pedro District, San Pedro, and the Los Angeles Harbor. In this case and one or two others, the location of columns for coastal places does not fit their actual linear relationship along the coast. Such deviations were made to obtain the best fit of the tables into the fewest number of pages with maximum clarity for the reader.

Data are presented in several forms. Information is included about the absolute size of a data item for a coastal place. The proportion of the coastal place to a City or the county is given as a percentage. In some cases, such as age, income, or persons per room, either the median or mean is calculated to provide a summary value and facilitate comparisons. It should be noted that there is a double entry for numbers in the columns for King Harbor, Long Beach Harbor, and Los Angeles Harbor. The data for these areas are included in the totals for the coastal places of which they are part. They are then reported in a separate column. Thus the total population of the Redondo Beach coastal place and King Harbor is 11,969 and not 14,938 which would be obtained by adding the column figures for both Redondo Beach coastal place and its subarea, King Harbor, together.

An additional point should be noted concerning column totals. In some cases, the totals for a data item such as

population will differ from one table to another for the same geographic place. Many Census tabulations are produced from a sample of 25, 15, or 5 percent of the population. This can result in small discrepancies if data items are based on different size samples. In other instances, there may be unaccounted-for errors in the Census tapes. Thus, if the population of the Redondo Beach Coastal Place is listed as 11,969 (as indicated above) from the general population count, and 11,647 in the table Age the inconsistencies are present in the Census data rather than the result of error in this report.

The exact order of the columns for the geographic places that are analyzed is as follows:

|                          |                           |
|--------------------------|---------------------------|
| Los Angeles County       | Santa Monica City         |
| Malibu Coast-LACO        | Santa Monica Coast        |
| Marina del Rey-LACO      |                           |
| LA County Tract 6202     | Los Angeles City          |
| Palos Verdes Peninsula   | San Pedro District        |
| Coast-LACO               | San Pedro Coast           |
|                          | Los Angeles Harbor        |
| El Segundo City          |                           |
| El Segundo Coast         | Long Beach City           |
|                          | Long Beach Coast          |
| Manhattan Beach City     | Long Beach Harbor         |
| Manhattan Beach Coast    |                           |
|                          | Hermosa Beach City        |
| Redondo Beach City       | Hermosa Beach Coast       |
| Redondo Beach Coast      |                           |
| King Harbor              | Torrance City             |
|                          | Torrance Coast            |
| Los Angeles City         |                           |
| Pacific Palisades Coast  | Palos Verdes Estates City |
| LACY                     | Palos Verdes Estates      |
| Venice Coast-LACY        | Coast                     |
|                          |                           |
| East Marina del Rey      |                           |
| Coast-LACY               |                           |
| Playa del Rey Coast-LACY |                           |

## Description of Data Items\*

The tables in Part III have been constructed using a large number of variables from the 1970 Census of Population and Housing. The data in the tables are grouped together under the general headings: Demographic; Income; Housing; and Education and Occupation. The definitions of most of the variables are self-evident, such as age or sex. There are, however, others which require further explanation or have specialized meanings as used by the Bureau of Census. A discussion of these terms and usages is included in the remainder of this section.

### Demographic

#### Race and Ethnicity

In Los Angeles County the two largest minority groups are Negro and "Spanish Heritage" forming 10.8 and 18.5 percent of the population respectively. The two groups, however, are defined in different ways by the Census. "Negro" is one of several racial classifications that people are asked to choose among in identifying themselves. The options include: White, Negro, Indian, Japanese, Chinese, Filipino, Hawaiian, and Korean.

The "Spanish Heritage" category is determined differently. For the five Southwestern states, California, Arizona, Colorado, New Mexico, and Texas, the term includes persons of Spanish surname or who use Spanish as a primary language.\*\* Thus, within Los Angeles County, persons of Spanish Heritage are primarily Mexican-Americans but sizable groups of Cubans, Puerto Ricans, and Central and South Americans are included. In terms of race, the vast majority of people in the Spanish Heritage category identify themselves as "White." In some instances a Negro may also have a Spanish surname or Spanish

---

\*Several references are listed at the end of this report which contain formal definitions of Census data items and explanations of how tabulations are made and tables constructed.

\*\*The Bureau of the Census uses two other distinct regional definitions for "Spanish Heritage." In the Middle Atlantic states of Pennsylvania, New Jersey, and New York, the term applies to persons of Puerto Rican birth or parentage. For the rest of the nation, exclusive of the Southwestern states, persons with Spanish as a primary language are included. For a discussion of some of the problems produced by these varying definitions, see Leobardo F. Estrada, Jose Hernandez and David Alvires, "Using Census Data to Study the Spanish Heritage Population of the United States," Mimeo (n.d.), Population Laboratory, University of Texas, Austin, Texas.

language. However, it is not possible to determine the number of such overlapping cases from the information that is available from the Census. Consequently, figures for White, Negro, and other races are listed in a separate table from those for Spanish Heritage.

### Marital and Family Characteristics

The five categories for marital status included in the Census are used in the tabulations here so that people are classified as:

Single - those never married or whose marriage was annulled.

Married - persons married and living together in a single household.

Separated - married persons living apart because of marital discord.

Divorced - persons who have been divorced without remarrying.

Widowed - persons whose spouses have died and who have not remarried.

A "household," for Census purposes, includes all the persons who occupy a group of rooms or a single room that constitutes a housing unit. The "head of the household" is the person who is regarded as the head by the other members. A "primary individual" is a person not living in a family group who is the head of a household. A "family" is defined as a group of two or more persons residing together who are related by blood, marriage, or adoption.

### Income

#### Distribution and Structure

The income distribution for families is outlined in the table "Income in 1969 of Families and Unrelated Individuals." It shows the number of families in each of fifteen income levels. Family income levels are summarized with estimates of both median and mean income. The structure of family income is reflected in the table "Type of Income in 1969 of Families." Here are listed numbers of families obtaining income from such general work classification as, wage and salary, self-employment, public assistance, etc., and the mean income for those families in each category.

### Poverty Level

The poverty level is based on an "economy" food plan developed by the Department of Agriculture which takes into account family size and number of children. A family is classified as living in poverty if its total money income is less than approximately three times the cost of the "economy" food plan. The table "Ratio of Family Income to Poverty Level" lists the percent of families having income at, above or below the required amount.

### Housing

All occupied housing units are listed as either owner or renter occupied. A vacant unit intended for year-round occupancy is termed a "vacant year-round unit" in the tabulations. Duration of the vacancy of units is measured by the length of time they were vacant immediately prior to the census enumeration. The length of occupancy of the current resident of a unit is tabulated under the heading "Year Head of Household Moved Into Unit." The table shows the number of units occupied for 1, 2, 3, 5, 10, 20, and 30 or more years. It should be noted that a low value for "median length of occupation of unit" could be the result of either high transiency or the newness of the housing stock.

### Value

The value of owner occupied units is included only for one-family homes on lots of less than ten acres. Census respondents were asked to estimate the fair market value of the house and lot. Eight levels of value are calculated, ranging from "less than \$5,000" to "more than \$50,000." Contract rent is the monthly dollar rent agreed upon or, for vacant units, the amount being asked. In obtaining contract rent the values of such things as furnishings, utilities, or housekeeping services are not included. Contract rent is broken down into nine levels ranging from "no cash rent" to "\$300 or more."

### Size, Density, Quality

A table "No. of Units in Multi-Unit Structures" gives the distribution of units among single and multi-unit dwellings. The distribution of mobile homes is also listed in this table. A related table, "Number of Units at Address," shows the breakdown of the number of dwellings in multi-unit structures. The size of the individual housing units is measured by the category "rooms per unit." This includes only whole rooms used for living purposes. The table "Persons Per Room" is a Census measure for crowding in residential housing. The table lists the number of units which have 1.00 or less, 1.01 to 1.50 or 1.51 or more persons per room. Units which exceed 1.51 persons per room are commonly considered overcrowded. Housing is also classified in terms of the number of persons per unit.

Two tables provide Census measures of the quality of the housing stock. One lists the units which lack one or all of the following facilities: piped hot and cold running water; flush toilets, and bathtub or shower inside the structure for use of the occupants only. The second table lists the number of units for which access is available only through other living quarters and those which lack complete kitchen facilities.

## Education and Occupation

### Education

There are two education-related tables. The first, "School Enrollment," lists the number of students in nursery schools, Kindergartens, elementary and high schools, and colleges. These figures are also broken down to indicate the numbers enrolled in public schools. Only persons between the ages of 3 and 34 years are included in the tabulation. The table "Years of School Completed" reports on the educational attainment of the mature population. From these statistics it is possible to calculate median school years completed and the proportion of the population which has graduated from high school.

### Occupation

Several of the concepts used here need definition. The "Civilian Labor Force" includes those who are 14 years of age or over and are either employed or unemployed. The total "Labor Force" includes the above as well as those in the Armed Forces. An "employed" person in the labor force is one normally working fifteen hours a week or more. Those listed as "unemployed" are persons out of work but who have had been "looking for work" during the 60 days preceding the census enumeration. This means, then, that people not in the labor force include those who are: unemployed but who had not been actively looking for work; working less than 15 hours a week; enrolled in school; or inmates of institutions. Figures relating to these categories are included in the table on "Employment Status."

Occupational classifications for employed persons are presented in two tables; "Class of Worker," and "Occupation." In the first, the categories include: private wage or salary; government; self-employed; and unpaid family workers. Occupations are broken down into four broad areas: white collar; blue collar; farm; and service. Each of these, in turn, include several subcategories.

The last table included in Part III, "Means of Transportation and Place of Work" presents information about the journey to work characteristics of employed coastal zone residents. The data are organized to show the number of people who live in the coastal zone and work in the following places and subareas:

Los Angeles-Long Beach Standard Metropolitan  
Statistical Area

Los Angeles Central Business District  
Remainder of Los Angeles City  
Long Beach Central Business District  
Remainder of Long Beach City  
Remainder of Los Angeles County

Outside the Los Angeles-Long Beach SMSA

Orange County

Modes of transportation tabulated include private auto,  
bus or streetcar, and walking; it is noted when a person  
works at home.

### III. DATA TABLES

The tables in this section present data for the 1970 Census for the County of Los Angeles. The data is presented for Los Angeles County, the 1,000 yard permit zone, coastal cities, and selected harbor areas. The tables contain five types of data: demographic, income, housing, education, and occupation.

#### IV. TECHNICAL INFORMATION

In this concluding section information is presented about the sources of Census information used, the creation and the use of a correspondence table in estimating characteristics of the coastal zone, sources of error, and the Census tracts that constitute the coastal zone.

##### Data Source: The 1970 Census of Population and Housing

The 1970 Census data has been released in printed form and is also available on magnetic computer tapes. The data is organized according to enumeration units which form a hierarchy in size. The smallest unit is the block having a population of 100. A small number of adjacent blocks, usually no more than nine, form a block-group. A tract is made up of four or five block-groups. Moreover, data is published for cities, counties, Standard Metropolitan Statistical Areas, and several other geographical units. Only a few simple tabulations and cross classifications are presented at the level of the smallest geographical unit the block; the most complex cross-tabulations are available at the tract level either in printed form or on the Fourth Count magnetic tapes. Some tabulations are available on the First Count tapes at the intermediate block-group level.

In most cases, tract boundaries are chosen by the Census Bureau to coincide with the boundaries of established municipal jurisdictions. This enables straight-forward summing of tract data to obtain summary aggregate statistics for cities and other urban jurisdictions. The 1,000 yard line defining the coastal zone divides many tracts so that parts lie within the zone and parts outside. This creates problems when an attempt is made to establish population characteristics of the coastal zone. The method used to handle this problem was the creation of a correspondence table by the procedures outlined below.

##### The Correspondence Table

The first step in the production of the correspondence table required the establishment of the 1,000 yard boundary on maps showing the mean high tide level, block, block-group, tract, and jurisdictional boundaries. Base maps used were those produced by the Bureau of the Census, Geography Division (compiled in 1966) at a scale of 1 inch = 800 feet. A list was compiled of blocks which were fully or partially included in the coastal zone permit area. Similar lists were compiled for overlapping or completely included block-groups and tracts. Using the population counts published in the

document "Block Statistics," estimates were made of the fraction of population included in the coastal zone for each overlapping enumeration unit. This was done as follows: the blocks were considered to be homogeneously populated so that the population fraction included was considered to be the same as the fraction of the area included. In this way a block-population-included was estimated, that is, by multiplying the block population by the area overlapping the zone. The estimate of included population of a block-group was obtained by adding the estimate of the blocks in the block group which were partially or fully included in the coastal zone. From the estimate of included block-group population, and the total population of the block group, an estimate of the percent-population-included could be obtained. In a similar way, the percent-population-included for overlapping tracts could be obtained. The percent-population-included for a block-group was used for estimating first count tabulations because data is presented at the block-group level. For estimating fourth count tabulations it was necessary to use the percent-population-included of overlapping tracts.

Estimates produced by this method were also necessary for King Harbor and Los Angeles Harbor. After tabulations were produced for all coastal places and harbor areas, the data set was augmented with First and Fourth Count tabulations for the coastal cities and Los Angeles County. The Census tracts which are completely within the 1,000 yard boundary for the permit area as well as those that overlap it are listed in Table IV-1. The tracts are ordered as they are located on the coast from north to south. Table IV-2 lists tracts used in defining harbor areas and the San Pedro District.

#### Sources of Error

Before concluding this section it should be pointed out that the tables produced are based on estimations. The tables are not "exact" but are, at best, reasonable approximations for describing the population and housing characteristics of the coastline. The reader is cautioned to bear in mind the following possibilities for error: many census tabulations are produced from a sample (25, 15 or 5 percent) of the population (see bibliography); the "percent included" for each variable is based on a total population estimate and is most accurate only for the total population tabulation; the boundary line, although drawn carefully, may not coincide with legal definition of the Coastal Zone boundary at all points; there may be unaccounted errors in the Census tapes; certain known errors may be accounted for incorrectly.

One unincorporated tract, Clifton, is not separately identified in the tables. A Census Bureau error resulted in the figures for Clifton being included with those of the City of Redondo Beach which completely surrounds the tract. This

error, which appears to be minor, is carried through in this report and Clifton is considered to be part of Redondo Beach.

A much more serious error in the Census data concerns Marina del Rey. In the production of tabulations for all counts of the 1970 Census, the characteristics of Los Angeles County Tract 7011 were added to those of tract 7029. This had the effect of lumping the characteristics of the Sawtelle Veterans Administration Hospital with those of Marina del Rey. However, the two tracts had remarkably dissimilar characteristics and it was possible to disaggregate the tabulations using internal evidence. Most of the problems were important only for the first count but some changes were made in fourth count tables as well.
